Executive Summary

ISO/IEC TR 15504:1998 - Software Process Assessment was originally issued as a Technical Report Type 2. ISO/IEC Directives state that a Technical Report Type 2 may be used to publish a prospective standard for provisional application so that information and experience of its practical use may be gathered. Following publication of the Technical Report, the Working Group responsible for its development recommended its revision with a view to publication as an International Standard; the recommendation was documented in SC7 N2177. This recommendation was accepted by JTC1 - refer JTC1 N5989.

The Technical Report has been substantially simplified and reduced from nine parts to five. This part of the revised ISO 15504 contains an exemplar Process Assessment Model that acts as guidance on the construction of assessment models conformant with the requirements of ISO/IEC 15504-2, and can be used as the basis for conducting an assessment of software engineering process capability.

The Process Dimension of this Part of ISO/IEC 15504 is based on the defined process purpose and outcomes described in ISO/IEC 12207 AMD 1 and AMD 2. Each base practice is cross-referenced to the relevant process outcome(s).

The Capability Dimension of this Part of ISO/IEC 15504 is based upon the set of Process Attributes defined in ISO/IEC 15504-2. Each generic practice is cross-referenced to a relevant process attribute achievement.

Editorial Note:

Process Purpose and Outcome statements are drawn from ISO/IEC 12207 AMD 1 and AMD 2, and comments on these elements cannot be addressed by the ballot. Such comments will be passed on to WG7 for consideration.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 15504-5 was prepared by Technical Committee ISO/IEC/TC JTC1, *Information Technology*, Subcommittee SC 7, *Software and Systems Engineering*.

This edition cancels and replaces ISO/IEC TR 15504—5:1998 which has been technically revised.

ISO/IEC 15504 consists of the following parts, under the general title *Information Technology — Process Assessment*:

- *Part 1 - Concepts and Vocabulary*
- *Part 2 - Performing an Assessment*
- *Part 3 - Guidance on performing an assessment*
- *Part 4 - Guidance on using assessment results*
- *Part 5: An exemplar Process Assessment Model*

This Part of ISO/IEC 15504 is informative.

Introduction

This part of ISO/IEC 15504 provides an example of a Process Assessment Model for use in performing a conformant assessment in accordance with the requirements of ISO/IEC 15504-2.

An integral part of conducting an assessment is to use a Process Assessment Model constructed for that purpose, related to a Process Reference Model and conformant with the requirements defined in ISO/IEC 15504-2. ISO/IEC 15504-2 provides a framework for process assessment and sets out the minimum requirements for performing an assessment in order to ensure consistency and repeatability of the ratings.

A Process Reference Model cannot be used alone as the basis for conducting consistent and reliable assessments of process capability since the level of detail is not sufficient. Therefore:

- the descriptions of process purpose and process outcomes provided by the Process Reference Model need to be supported with a comprehensive set of indicators of process performance; and
- the capability levels and process attributes defined in ISO/IEC 15504-2 and its associated rating scale need to be supported with a set of indicators of process capability.

Used in this way, in conjunction with a documented process, consistent and repeatable ratings of process capability will be possible.

This Process Assessment Model contains a set of indicators to be considered when interpreting the intent of the Process Reference Model. These indicators may also be used when implementing a process improvement program or to help evaluate and select an assessment model, method, methodology or tools.

The Process Reference Model defined in ISO/IEC 12207 AMD 1 and AMD 2 has been used as the basis for the Process Assessment Model in this standard.

As an exemplar, this Process Assessment Model embodies the core characteristics that could be expected of any Process Assessment Model consistent with ISO/IEC 15504-2. Nevertheless, use of this Process Assessment Model is not required to meet the requirements of ISO/IEC 15504; any other Process Assessment Models meeting the requirements of ISO/IEC 15504-2 may be used in a conformant assessment.

Within this part of ISO/IEC TR 15504:

- clause 4 provides a detailed description of the structure and key components of the process assessment model, which includes two dimensions: a process dimension and a capability dimension; assessment indicators are introduced in this clause;
- clause 5 addresses the process dimension. It uses process definitions from ISO/IEC 12207 AMD 1 and AMD 2 to identify a Process Reference Model. The processes of the Process Reference Model are described in the Process Assessment Model in terms of purpose and outcomes and are grouped in three process categories. The Process Assessment Model expands the Process Reference Model process definitions by including a set of process performance indicators called base practices for each process. The Process Assessment Model also defines a second set of indicators of process performance by associating work products with each process. Annex B is also linked directly to clause 5 as it defines the work product characteristics;
- clause 6 addresses the capability dimension. It duplicates the definitions of the capability levels and process attributes from ISO/IEC 15504-2, and expands each of the 9 attributes through the inclusion of a set of generic practices. These generic practices belong to a set of indicators of process capability, in association with generic resource indicators, and generic work product indicators;

- Annex A provides a statement of conformance of the Process Assessment Model to the requirements defined in ISO/IEC 15504-2;
- Annex B provides selected characteristics for typical work products to assist the assessor in evaluating the capability level of processes;
- Annex C contains style guides for defining base practices, work products and generic practices for adjusting the Process Assessment Model, and guidance explaining how to expand or adapt the model; and
- Annex D is a Bibliography that contains a list of informative references.

Information Technology — Process Assessment — Part 5: An exemplar Process Assessment Model

1 Scope

This informative part of ISO/IEC 15504:

- defines an exemplar Process Assessment Model that meets the requirements of ISO/IEC 15504-2 and that supports the performance of an assessment by providing indicators for guidance on the interpretation of the process purposes and outcomes as defined in ISO/IEC 12207 AMD 1 and AMD 2 and the process attributes as defined in ISO/IEC 15504-2;
- provides guidance, by example, on the definition, selection and use of assessment indicators.

A Process Assessment Model comprises a set of indicators of process performance and process capability. The indicators are used as a basis for collecting the objective evidence that enables an assessor to assign ratings. The set of indicators included in this part of ISO/IEC 15504 is not intended to be an all-inclusive set nor is it intended to be applicable in its entirety. Subsets that are appropriate to the context and scope of the assessment should be selected, and possibly augmented with additional indicators (see Annex C).

The Process Assessment Model in this part of ISO/IEC 15504 is directed at assessment sponsors and competent assessors who wish to select a model, and associated documented process method, for assessment (for either capability determination or process improvement). Additionally it may be of use to developers of assessment models in the construction of their own model, by providing examples of good software engineering and management practices.

Any Process Assessment Model meeting the requirements defined in ISO/IEC 15504-2 concerning models for process assessment may be used for assessment. Different models and methods may be needed to address differing business needs. The assessment model in this part of ISO/IEC 15504 is provided as an exemplar of a model meeting all the requirements expressed in ISO/IEC 15504-2.

NOTE **Copyright release for the Exemplar Process Assessment Model:** Users of this part of ISO/IEC 15504 may freely reproduce the detailed descriptions contained in the exemplar assessment model as part of any tool or other material to support the performance of process assessments, so that it can be used for its intended purpose.

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this part of ISO/IEC 15504. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this part of ISO/IEC 15504 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

ISO/IEC 12207 - *Information Technology - Software life cycle processes*, with ISO/IEC 12207 AMD1 and ISO/IEC 12207 AMD2

ISO/IEC 15504-1: 2004, *Information technology - Process assessment – Part 1: Concepts and Vocabulary*

3 Terms and definitions

For the purposes of this part of ISO/IEC 15504, the terms and definitions given in ISO/IEC 15504-1 apply.

4 Overview of the exemplar Process Assessment Model

4.1 Introduction

This part of ISO/IEC 15504 provides an exemplar Process Assessment Model that includes examples of assessment indicators.

The Process Reference Model defined in ISO/IEC 12207 AMD1 and AMD 2, associated with the process attributes defined in ISO/IEC 15504-2, provides a common basis for performing assessments of software engineering process capability, allowing for the reporting of results using a common rating scale.

The Process Reference Model defines a two-dimensional model of process capability. In one dimension, the process dimension, the processes are defined and classified into process categories. In the other dimension, the capability dimension, a set of process attributes grouped into capability levels is defined. The process attributes provide the measurable characteristics of process capability.

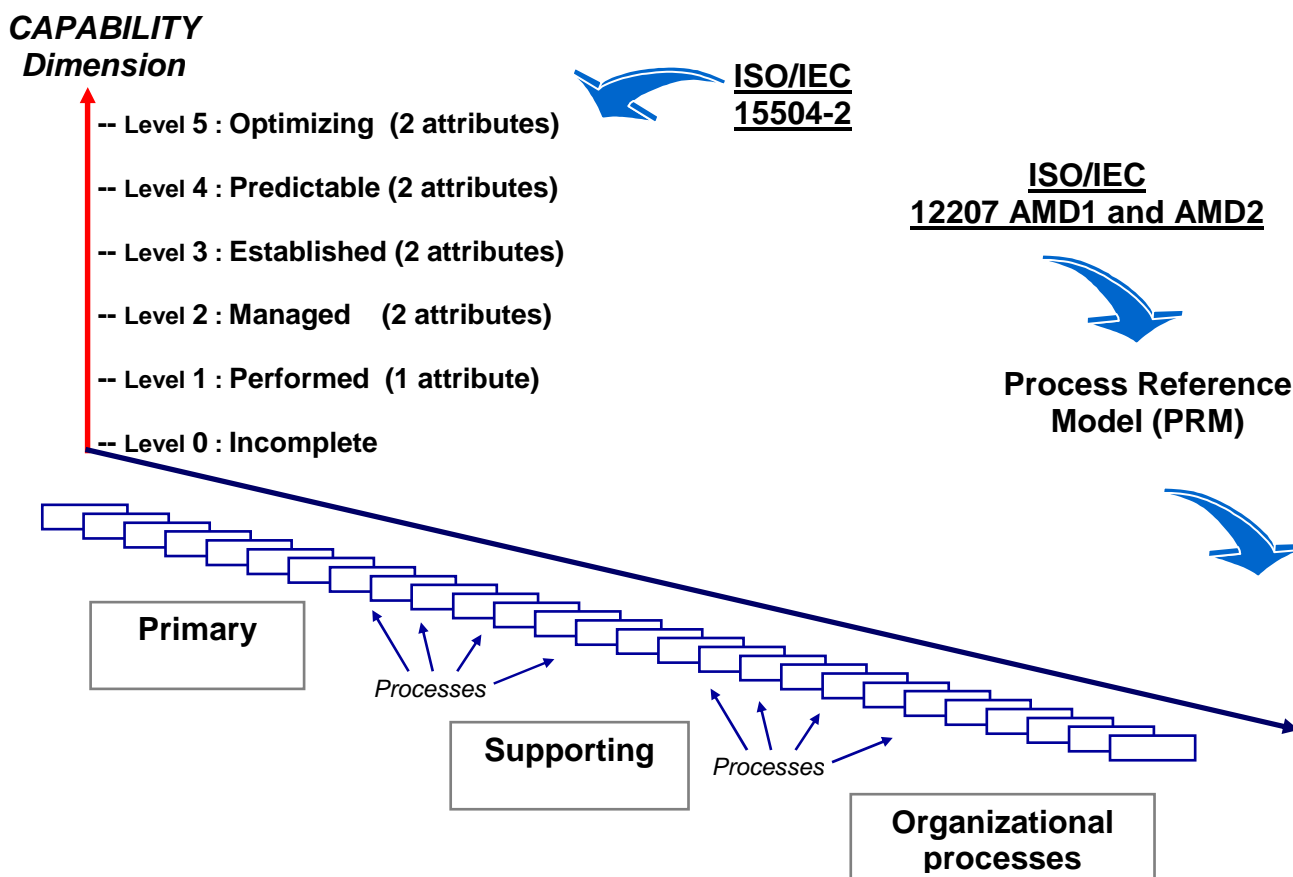

Figure 1 — Relationship between the Process Assessment Model and its inputs

Figure 1 shows the relationship between the general structure of the Process Assessment Model, ISO/IEC 15504-2 and ISO/IEC 12207 AMD1 and AMD 2.

The Process Reference Model and the capability dimension defined in ISO/IEC 15504-2 cannot be used alone as the basis for conducting reliable and consistent assessments of process capability since the level of detail provided is not sufficient. The descriptions of process purpose and outcomes in the Process Reference Model, and the process attribute definitions in ISO-IEC 15504-2, need to be supported with a comprehensive set of indicators of process performance and process capability.

The exemplar Process Assessment Model defined in this part of ISO/IEC 15504 is conformant with the ISO/IEC 15504-2 requirements for a Process Assessment Model, and can be used as the basis for conducting an assessment of software engineering process capability.

In order to meet the requirements of ISO/IEC 15504-2, a documented process supporting other requirements of ISO/IEC 15504-2 is also required. This need may be met, for example, by the adoption of a supporting method for conducting assessments.

4.2 Structure of the exemplar Process Assessment Model

This clause describes the detailed structure of the Process Assessment Model and its key components.

This Process Assessment Model expands upon the Process Reference Model by adding the definition and use of assessment indicators. Assessment indicators comprise indicators of process performance and process capability and are defined to support an assessor's judgment of the performance and capability of an implemented process.

Clause 5, together with its associated Annex B, describes the components of the process dimension and clause 6, describes the components of the capability dimension. Annex A provides a demonstration of conformity that meets the requirements of ISO/IEC 15504-2.

ISO/IEC 15504-2 requires that processes included in a Process Reference Model satisfy the following:

"The fundamental elements of a Process Reference Model are the set of descriptions of the processes within the scope of the model. These process descriptions shall meet the following requirements:

- a) A process shall be described in terms of its Purpose and Outcomes.*
- b) In any description the set of process outcomes shall be necessary and sufficient to achieve the purpose of the process.*
- c) Process descriptions shall be such that no aspects of the measurement framework as described in clause 5 of this International Standard beyond level 1 are contained or implied."*

As processes directly are derived directly from ISO/IEC 12207 AMD1 and AMD 2, these requirements are satisfied.

The Process Assessment Model includes processes, which are grouped in three process categories, identical to the process categories defined in ISO/IEC 12207 AMD1 and AMD2, which are:

- the Primary life cycle processes category;
- the Supporting life cycle processes category;
- the Organizational life cycle processes category.

Within a process category, processes are grouped at a second level according to the type of activity they address: the processes included in the same group contribute to a complementary area. These groups are defined in order to help assessors in defining the assessment scope in term of process selection.

4.2.1 Processes

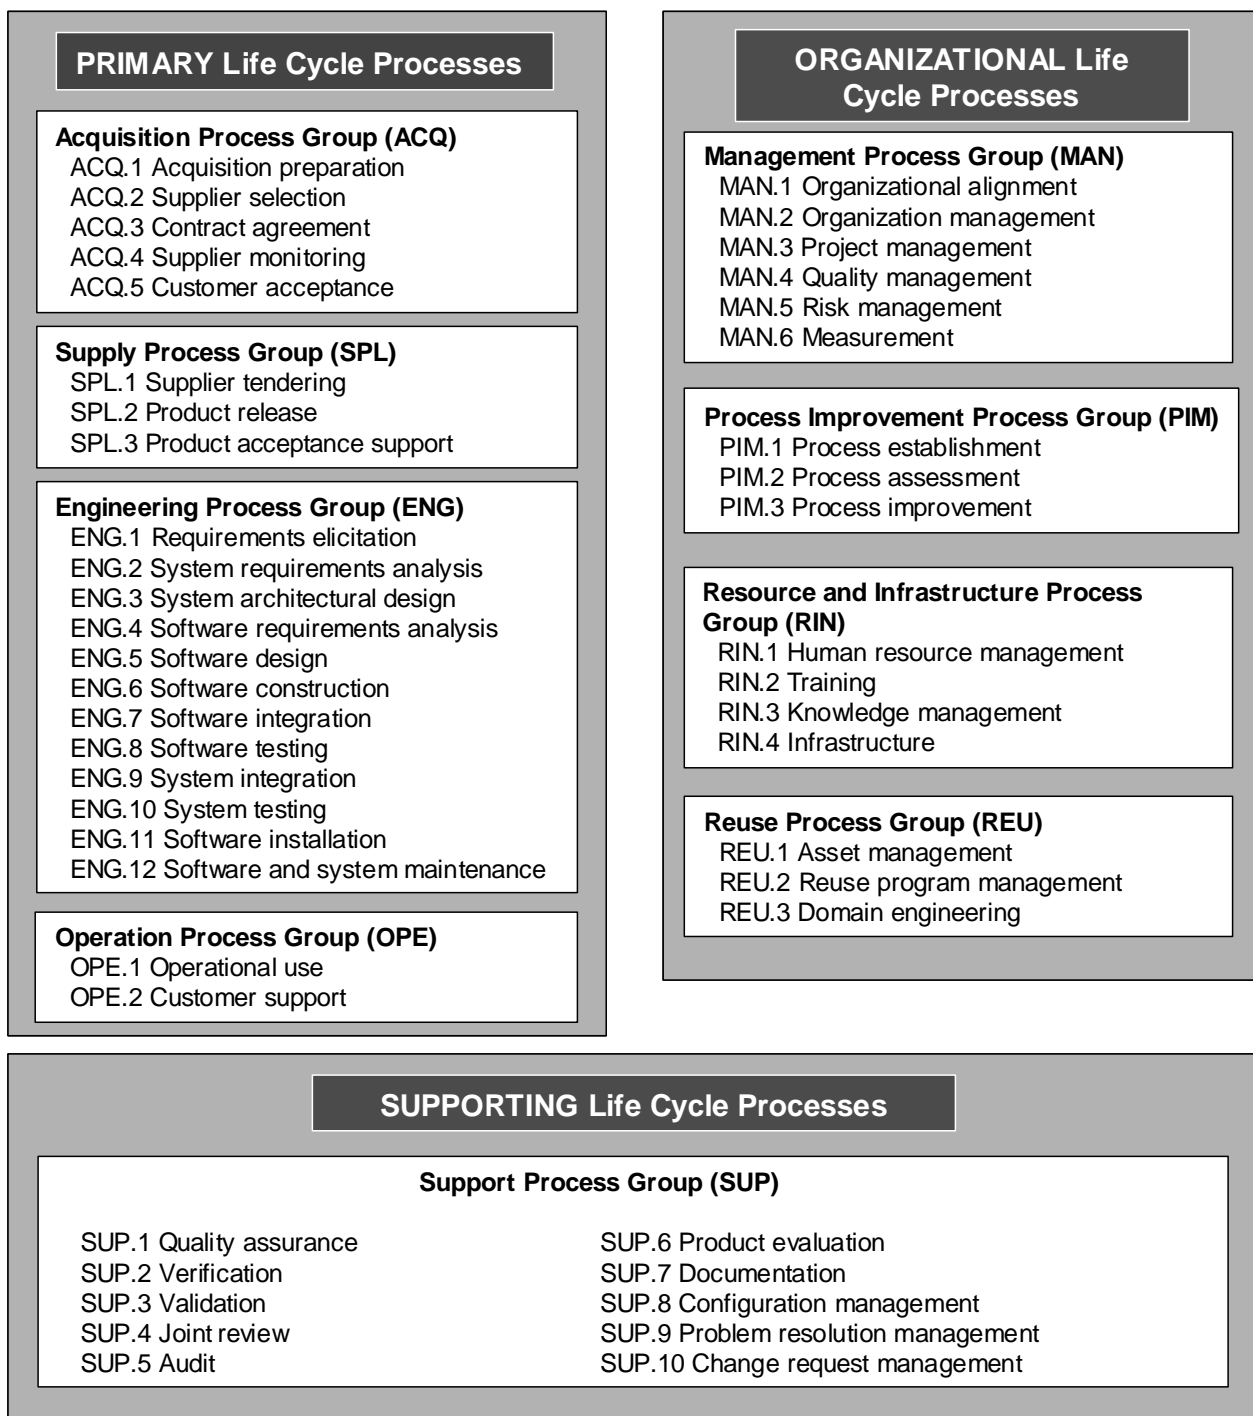

Figure 2 — Process Categories and Process Groups

Figure 2 lists the processes from ISO/IEC 12207 AMD1 and AMD2 that are included in the process dimension of the exemplar Process Assessment Model, and show their classification (for the purpose of this Process Assessment Model) into Process Categories and Process Groups. The Process Categories and Process Groups are described in more detail below.

4.2.1.1 Primary Life Cycle Processes Category

The Primary Life Cycle Processes Category contains the following four groups of processes:

- the Acquisition process group;
- the Supply process group;
- the Engineering process group;
- the Operation process group.

The **Acquisition** process group (ACQ) consists of processes performed by the customer, in order to acquire a product and/or a service.

Note: A supplier may also act as a customer when acquiring a product and/or service from another supplier.

This group includes the processes listed in Table 1.

Table 1 — Primary Life Cycle Processes – Acquisition process group

Process Identification	Process name	Source
ACQ.1	Acquisition preparation	ISO/IEC 12207 AMD 1
ACQ.2	Supplier selection	ISO/IEC 12207 AMD 1
ACQ.3	Contract agreement	ISO/IEC 12207 AMD 2
ACQ.4	Supplier monitoring	ISO/IEC 12207 AMD 1
ACQ.5	Customer acceptance	ISO/IEC 12207 AMD 1

The **Supply** process group (SPL) consists of processes performed by the supplier in order to propose and deliver a product and/or a service.

This group includes the processes listed in Table 2.

Table 2 — Primary Life Cycle Processes – Supply process group

Process Identification	Process name	Source
SPL.1	Supplier tendering	ISO/IEC 12207 AMD 2
SPL.2	Product release	ISO/IEC 12207 AMD 2
SPL.3	Product acceptance support	ISO/IEC 12207 AMD 2

The **Engineering** process group (ENG) consists of processes that directly elicit and manage the customer's requirements, specify, implement, and/or maintain the software product and its relation to the system.

This group includes the processes listed in Table 3.

Table 3 — Primary Life Cycle Processes – Engineering process group

Process Identification	Process name	Source
ENG.1	Requirements elicitation	ISO/IEC 12207 AMD 1
ENG.2	System requirements analysis	ISO/IEC 12207 AMD 1
ENG.3	System architectural design	ISO/IEC 12207 AMD 1
ENG.4	Software requirements analysis	ISO/IEC 12207 AMD 1
ENG.5	Software design	ISO/IEC 12207 AMD 1
ENG.6	Software construction	ISO/IEC 12207 AMD 1
ENG.7	Software integration	ISO/IEC 12207 AMD 1
ENG.8	Software testing	ISO/IEC 12207 AMD 1
ENG.9	System integration	ISO/IEC 12207 AMD 1
ENG.10	System testing	ISO/IEC 12207 AMD 1
ENG.11	Software installation	ISO/IEC 12207 AMD 1
ENG.12	Software and system maintenance	ISO/IEC 12207 AMD 1

The **Operation** process group (OPE) consists of processes performed in order to provide for the correct operation and use of the software product and/or service.

This group includes the processes listed in Table 4.

Table 4 — Primary Life Cycle Processes – Operation process group

Process Identification	Process name	Source
OPE.1	Operational use	ISO/IEC 12207 AMD 1
OPE.2	Customer support	ISO/IEC 12207 AMD 1

4.2.1.2 Supporting Life Cycle Processes Category

The Supporting Life Cycle Processes Category consists of processes which may be employed, by any other processes at various points in the software life cycle. These processes belong to the **Support** process group (SUP) and are performed:

- to control and maintain the integrity of the product or service developed by the engineering processes;
- to provide assurance that work products and processes comply with predefined provisions and plans.

This group includes the processes listed in Table 5.

Table 5 — Supporting Life Cycle Processes - Support process group

Process Identification	Process name	Source
SUP.1	Quality assurance	ISO/IEC 12207 AMD 1
SUP.2	Verification	ISO/IEC 12207 AMD 1
SUP.3	Validation	ISO/IEC 12207 AMD 1
SUP.4	Joint review	ISO/IEC 12207 AMD 1
SUP.5	Audit	ISO/IEC 12207 AMD 1
SUP.6	Product evaluation	ISO/IEC 12207 AMD 1
SUP.7	Documentation	ISO/IEC 12207 AMD 1
SUP.8	Configuration management	ISO/IEC 12207 AMD 2
SUP.9	Problem resolution management	ISO/IEC 12207 AMD 2
SUP.10	Change request management	ISO/IEC 12207 AMD 2

4.2.1.3 Organizational Life Cycle Processes Category

The **Organizational Life Cycle** Processes Category consists of processes that establish the business goals of the organization and develop process, product, and resource assets which, when used by the projects in the organization, will help the organization achieve its business goals.

The Organizational Life Cycle Processes Category contains the following four groups of processes:

- the Management process group;
- the Process Improvement process group;
- the Resource and Infrastructure process group; and
- the Reuse process group.

The **Management** process group (MAN) consists of processes that contain practices that may be used by anyone who manages any type of project or process within a software life cycle.

This group includes the processes listed in Table 6.

Table 6 — Organizational Life Cycle Processes - MAN process group

Process Identification	Process name	Source
MAN.1	Organizational alignment	ISO/IEC 12207 AMD 1
MAN.2	Organization management	ISO/IEC 12207 AMD 1
MAN.3	Project management	ISO/IEC 12207 AMD 1
MAN.4	Quality management	ISO/IEC 12207 AMD 1
MAN.5	Risk management	ISO/IEC 12207 AMD 2

Process Identification	Process name	Source
MAN.6	Measurement	ISO/IEC 12207 AMD 1

The **Process Improvement** process group (PIM) consists of performed in order to define, deploy, assess and improve the processes performed in the organizational unit.

This group includes the processes listed in Table 7.

Table 7 — Organizational Life Cycle Processes - PIM process group

Process Identification	Process name	Source
PIM.1	Process establishment	ISO/IEC 12207 AMD 1
PIM.2	Process assessment	ISO/IEC 12207 AMD 1
PIM.3	Process improvement	ISO/IEC 12207 AMD 2

The **Resource and Infrastructure** process group (RIN) consists of processes performed in order to provide adequate human resources and necessary infrastructure as required by any other process performed by the organizational unit.

This group includes the processes listed in Table 8.

Table 8 — Organizational Life Cycle Processes - RIN process group

Process Identification	Process name	Source
RIN.1	Human resource management	ISO/IEC 12207 AMD 1
RIN.2	Training	ISO/IEC 12207 AMD 1
RIN.3	Knowledge management	ISO/IEC 12207 AMD 1
RIN.4	Infrastructure	ISO/IEC 12207 AMD 2

The **Reuse** process group (REU) consists of performed in order to systematically exploit reuse opportunities in organization's reuse programmers.

This group includes the processes listed in Table 9.

Table 9 — Organizational Life Cycle Processes - REU process group

Process Identification	Process name	Source
REU.1	Asset management	ISO/IEC 12207 AMD 1
REU.2	Reuse program management	ISO/IEC 12207 AMD 2
REU.3	Domain engineering	ISO/IEC 12207 AMD 1

4.2.2 Process dimension

For the process dimension, all the processes in Figure 2 above are included within the process dimension of the Process Assessment Model. The processes are classified into Process Categories and Process Groups. There are 3 Process Categories: Primary Life Cycle Processes, Organizational Life Cycle Processes and Supporting Life Cycle Processes. Each process in the Process Assessment Model is described in terms of a purpose statement. These statements contain the unique functional objectives of the process when performed in a particular environment. A list of specific outcomes is associated with each of the process purpose statements, as a list of expected positive results of the process performance.

Satisfying the purpose statements of a process represents the first step in building a level 1 process capability where the expected outcomes are observable. The Process Groups and their associated processes are described in Clause 5.

4.2.3 Capability dimension

For the capability dimension, the process capability levels and process attributes are identical to those defined in ISO/IEC 15504-2.

Evolving process capability is expressed in the Process Assessment Model in terms of process attributes grouped into capability levels. Process attributes are features of a process that can be evaluated on a scale of achievement, providing a measure of the capability of the process. They are applicable to all processes. Each process attribute describes a facet of the overall capability of managing and improving the effectiveness of a process in achieving its purpose and contributing to the business goals of the organization.

A capability level is a set of process attribute(s) that work together to provide a major enhancement in the capability to perform a process. Each level provides a major enhancement of capability in the performance of a process. The levels constitute a rational way of progressing through improvement of the capability of any process and are defined in ISO/IEC 15504-2.

There are six capability levels, incorporating nine process attributes.

Level 0: Incomplete process

The process is not implemented, or fails to achieve its process purpose.

At this level, there is little or no evidence of any systematic achievement of the process purpose.

Level 1: Performed process

The implemented process achieves its process purpose.

Level 2: Managed process

The previously described Performed process is now implemented in a managed fashion (planned, monitored and adjusted) and its work products are appropriately established, controlled and maintained.

Level 3: Established process

The previously described Managed process is now implemented using a defined process that is capable of achieving its process outcomes

Level 4: Predictable process

The previously described Established process now operates within defined limits to achieve its process outcomes.

Level 5: Optimizing process

The previously described Predictable process is continuously improved to meet relevant current and projected business goals.

Within the Process Assessment Model, the measure of capability is based upon the nine process attributes (PA) defined in ISO/IEC 15504-2. Process attributes are used to determine whether a process has reached a given capability. Each attribute measures a particular aspect of the process capability.

At each level there is no ordering between the process attributes; each attribute addresses a specific aspect of the capability level. The list of process attributes is shown in Table 10.

Table 10 — Capability levels and process attributes

Process Attribute ID	Capability Levels and Process Attributes
	Level 0: Incomplete process
	Level 1: Performed process
PA 1.1	Process performance
	Level 2: Managed process
PA 2.1	Performance management
PA 2.2	Work product management
	Level 3: Established process
PA 3.1	Process definition
PA 3.2	Process deployment
	Level 4: Predictable process
PA 4.1	Process measurement
PA 4.2	Process control
	Level 5: Optimizing process
PA 5.1	Process innovation
PA 5.2	Continuous optimization

The process attributes are evaluated on a four point ordinal scale of achievement, as defined in ISO/IEC 15504-2. They provide insight into the specific aspects of process capability required to support process improvement and capability determination.

4.3 Assessment Indicators

The Process Assessment Model is based on the principle that the capability of a process can be assessed by demonstrating the achievement of process attributes on the basis of evidences related to assessment indicators.

There are two types of assessment indicators: process capability indicators, which apply to capability levels 1 to 5 and process performance indicators, which apply exclusively to capability level 1.

The process attributes in the capability dimension have a set of process capability indicators that provide an indication of the extent of achievement of the attribute in the instantiated process. These indicators concern significant activities, resources or results associated with the achievement of the attribute purpose by a process.

The process capability indicators are:

- Generic Practice (GP);
- Generic Resource (GR);

- Generic Work Product (GWP).

As additional indicators for supporting the assessment of a process at Level 1, each process in the process dimension has a set of process performance indicators which is used to measure the degree of achievement of the process performance attribute for the process assessed.

The process performance indicators are:

- Base Practice (BP);
- Work Product (WP).

The performance of Base Practices (BPs) provides an indication of the extent of achievement of the process purpose and process outcomes. Work Products (WPs) are either used, produced or both, when performing the process.

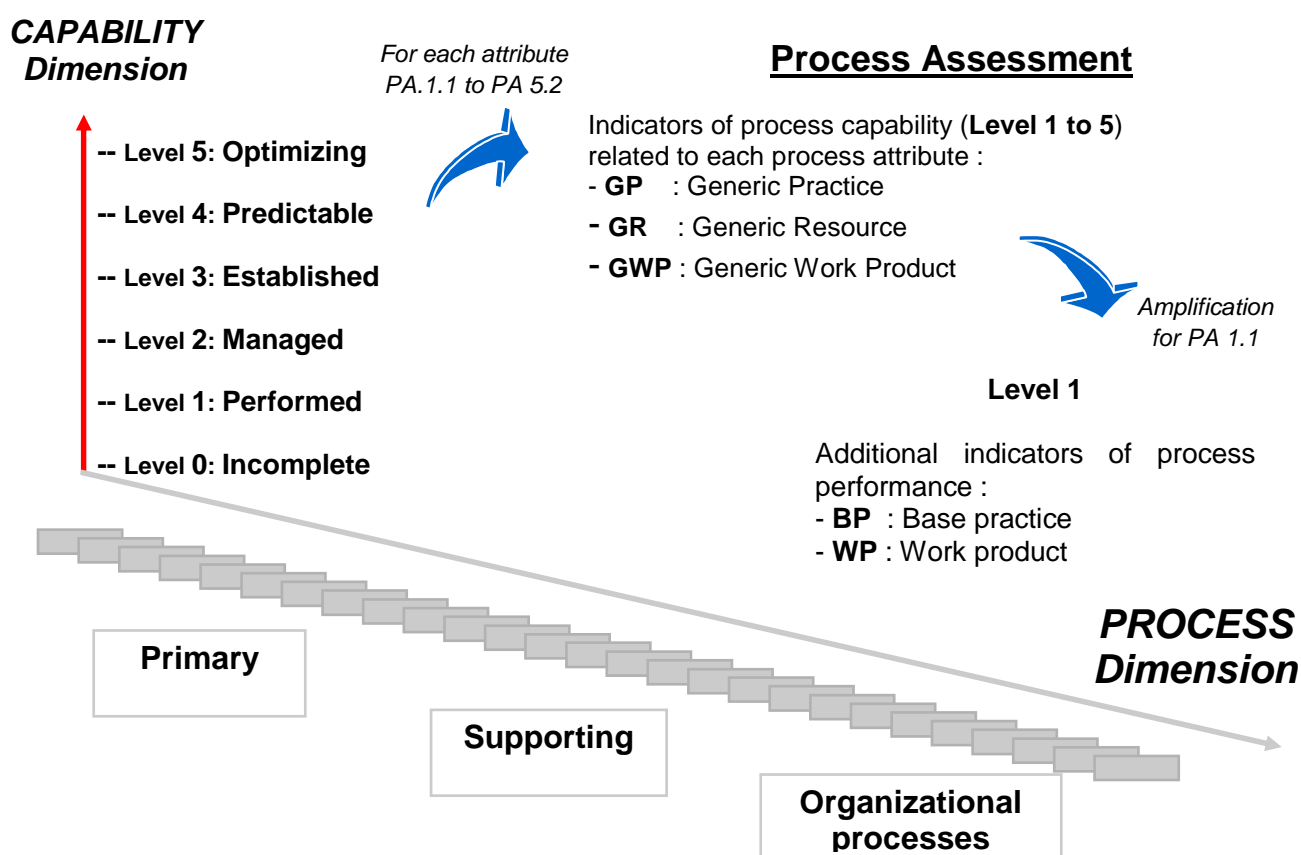

Figure 3 — Assessment indicators

The process performance and process capability indicators defined in the Process Assessment Model represent types of objective evidence that might be found in an instantiation of a process and therefore could be used to judge achievement of capability.

Figure 3 shows how the assessment indicators are related to process performance and process capability.

4.3.1 Process Capability Indicators

The three types of process capability indicators related to levels 1 to 5 are identified in Figure 4. They are intended to be applicable to all processes.

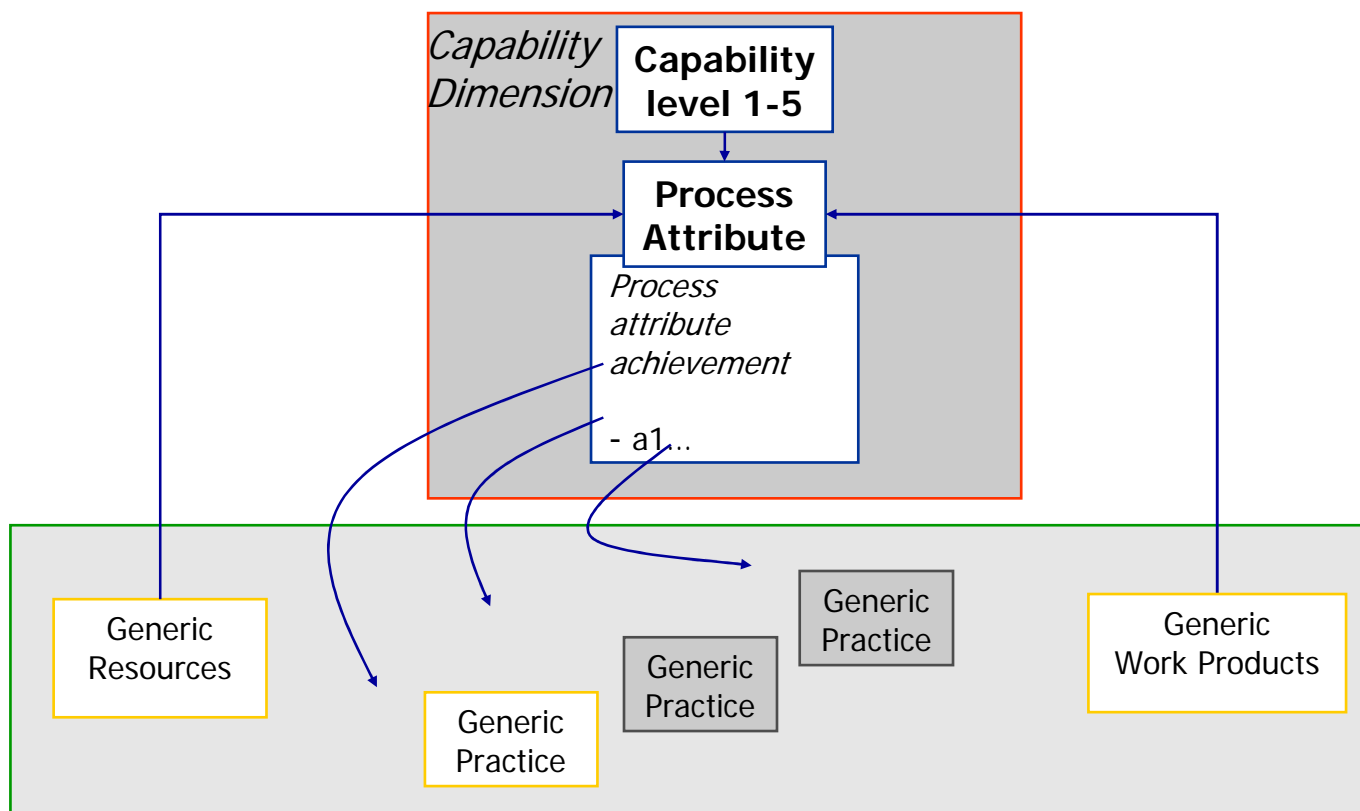

Figure 4 — Process capability indicators

All the process capability indicators relate to the process attributes defined in the capability dimension of the Process Assessment Model. They represent the type of evidence that would substantiate judgments of the extent to which the attributes are achieved. Evidence of their effective performance or existence supports the judgment of the degree of achievement of the attribute. The generic practices are the principal indicators of process capability.

The **Generic Practice (GP)** indicators are activities of a generic type and provide guidance on the implementation of the attribute's characteristics. They are designed around the achievement of the process attribute and many of them concern management practices, i.e. practices that are established to support the process performance as it is characterized at level 1.

During the evaluation of process capability, the primary focus is on the instantiation of the generic practices. In general, performance of all generic practices is expected for full achievement of the process attribute

The **Generic Resource (GR)** indicators are associated resources that may be used when performing the process in order to achieve the attribute. These resources may include human resources, tools, methods and infrastructure.

The **Generic Work Product (GWP)** indicators are sets of characteristics that would be expected to be evident in work products of generic types as a result of achievement of an attribute. The generic work products form the basis for the classification of the work products defined as process performance indicators; they represent basic types of work products that may be inputs to or outputs from all types of process.

These three types of indicators help to establish objective evidence of the extent of achievement of the specified process attribute.

Due to the fact that Level 1 capability of a process is only characterized by the measure of the extent to which the process purpose is achieved, the process performance attribute (PA.1.1) has a single generic practice indicator (GP.1.1.1). In order to support the assessment of PA.1.1 and to amplify the process performance achievement analysis, additional process performance indicators are defined in the Process Assessment Model.

4.3.2 Process Performance Indicators

There are two types of process performance indicators; **Base Practice (BP)** indicators and **Work Product (WP)** indicators. Process performance indicators relate to individual processes defined in the process dimension of the process assessment model and are chosen to explicitly address the achievement of the defined process purpose.

Evidence of performance of the base practices, and the presence of work products with their expected work product characteristics, provide objective evidence of the achievement of the purpose of the process.

A base practice is an activity that addresses the purpose of a particular process. Consistently performing the base practices associated with a process will help the consistent achievement of its purpose. A coherent set of base practices is associated with each process in the process dimension. The base practices are described at an abstract level, identifying "what" should be done without specifying "how". Implementing the base practices of a process should achieve the basic outcomes that reflect the process purpose. Base Practices represent only the first step in building process capability, but the base practices represent the unique, functional activities of the process, even if that performance is not systematic. The performance of a process produces work products that are identifiable and usable in achieving the purpose of the process. In this assessment model, each work product has a defined set of example work product characteristics that may be used when reviewing the work product to assess the effective performance of a process.

Clause 5 contains a complete description of the processes, including the base practices and the associated work products.

Annex B.1 contains a list of generic work product together with the work product characteristics.

Annex B.2 contains a complete list specific work products, with the generic work products for completeness. Similar to the concept of modularity in object orientation, the shared characteristics of a group of work products have been extracted into a generic work product. An assessor would refer to both the specific work product and the generic work product in the context of the specific work product (e.g. 02-01 Commitment / agreement characteristics + 02-00 Contract characteristics) when performing an assessment.

4.4 Measuring process capability

The process performance and process capability indicators in this model give examples of evidence that an assessor might obtain, or observe, in the performance of an assessment. The evidence obtained in the assessment, through observation of the implemented process, can be mapped onto the set of indicators to enable correlation between the implemented process and the processes defined in this assessment model. These indicators provide guidance for assessors in accumulating the necessary objective evidence to support judgments of capability. They are not intended to be regarded as a mandatory set of checklists to be followed.

An indicator is defined as an objective characteristic of a practice or work product that supports the judgment of the performance or capability of an implemented process. The assessment indicators, and their relationship to process performance and process capability, are shown in Figure 5.

Assessment indicators are used to confirm that certain practices were performed, as shown by observable evidence collected during an assessment. All such evidence comes either from the examination of work products of the processes assessed, or from statements made by the performers and managers of the processes.

The existence of base practices, work products, and work product characteristics, provide evidence of the performance of the processes associated with them. Similarly, the existence of process capability indicators provides evidence of process capability.

The evidence obtained should be recorded in a form that clearly relates to an associated indicator, so that the support for the assessor's judgment can be readily confirmed or verified as required by ISO/IEC 15504-2.

The output from a process assessment is a set of process profiles, one for each process within the scope of the assessment. Each process profile consists of a set of the process attribute ratings for an assessed process. Each attribute rating represents a judgment by the assessor of the extent to which the attribute is achieved. To improve the reliability and repeatability of the assessment, the judgments of the assessor are based on a coherent set of recorded objective evidences.

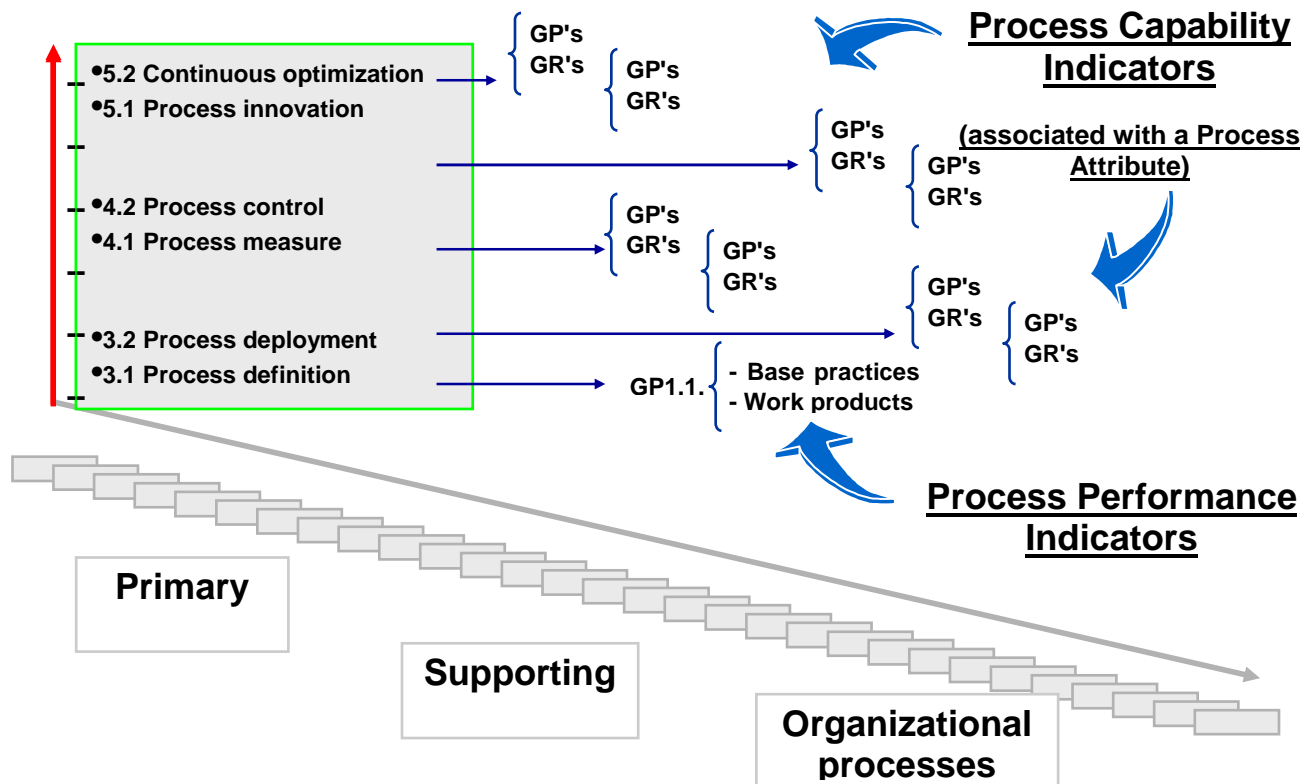

Figure 5 — Relationship between assessment indicators and process capability

5 The process dimension and process performance indicators (level 1)

This clause defines the processes and the process performance indicators, also known as the process dimension, of the Process Assessment Model. The processes in the process dimension can be directly mapped to the processes defined in the Process Reference Model which adopts the same process definitions as ISO/IEC 12207 AMD 1 and AMD 2.

The processes are classified (for the purpose of this Process Assessment Model) into Process Categories and Process Groups which are listed in Clause 4.

The description of each process group includes a characterization of the processes it contains, followed by a list of the process names. The individual processes are described in terms of Process Name, Process Purpose, and Process Outcomes as defined in ISO/IEC 12207 AMD 1 and AMD 2. Additional components are Process Identifier, and Process Notes, when needed. In addition the process dimension of the Process Assessment Model provides information in the form of:

- a) a set of base practices for the process providing a definition of the tasks and activities needed to accomplish the process purpose and fulfil the process outcomes;
- b) a number of input and output work products associated with each process; and
- c) characteristics associated with each work product.

The process purposes, outcomes, the base practices and the work products associated with the processes are included in this clause. The work product characteristics are contained in Annex B. The base practices and work products constitute the set of indicators of process performance.

The associated work products listed in this clause may be used when reviewing potential inputs and outputs of an organization's process implementation.

The associated work products provide objective guidance for potential inputs and outputs to look for, and objective evidence supporting the assessment of a particular process. A documented assessment process and assessor judgment is needed to ensure that process context (application domain, business purpose, development methodology, size of the organization, etc.) is explicitly considered to use this information. This list should not be considered as a checklist of what each organization must have but rather as an example and starting point for considering whether, given the context, the work products are necessary and contributing to the intended purpose of the process.

These work products are identified with their work product identifier number as used in the Annex B.

5.1 The Acquisition Process Group (ACQ)

5.1.1 ACQ.1 Acquisition preparation

Process ID	ACQ.1
Process Name	Acquisition preparation
Process Purpose	The purpose of the Acquisition preparation process is to establish the needs and goals of the acquisition and to communicate these with the potential suppliers.
Process Outcomes	<p>As a result of successful implementation of Acquisition preparation process:</p> <ol style="list-style-type: none"> 1) the concept or the need for the acquisition, development, or enhancement is established; 2) the needed acquisition requirements defining the project needs are defined and validated; 3) the customer's known requirements are defined and validated; 4) an acquisition strategy is developed; and 5) supplier selection criteria are defined.
Base Practices	<p>ACQ.1.BP1: Establish the need. Establish a need to acquire, develop, or enhance a system, software product or service. [Outcome: 1]</p> <p>ACQ.1.BP2: Define the requirements. Identify the customer / stakeholder requirements for a system and/or software product or service. [Outcome: 2, 3]</p> <p>ACQ.1.BP3: Review requirements. Analyze and validate the defined requirements against the identified needs. Validate the requirements to reduce risk of misunderstanding by the potential suppliers. [Outcome: 3]</p> <p>ACQ.1.BP4: Develop acquisition strategy. Develop a strategy for the acquisition of the product according to the acquisition needs. [Outcome: 4]</p> <p>NOTE: The strategy may include reference to the life cycle model, schedule, budget and selection criteria.</p> <p>ACQ.1.BP5: Define selection criteria. Establish and agree on supplier selection criteria and the means of evaluation to be used. [Outcome: 4, 5]</p> <p>ACQ.1.BP6 Communicate the need. Communicate the need for acquisition to interest parties through the identified channels. [Outcome 1]</p>

Work Products	
Inputs	Outputs
	08-02 Acquisition plan [Outcome: 4]
	12-01 Request for proposal [Outcome: 4, 5]
	13-19 Review record [Outcome: 3]
	15-01 Analysis report [Outcome: 1, 2]
15-04 Market analysis report [Outcome: 2]	
15-19 Product needs assessment [Outcome: 1, 3, 4]	15-19 Product needs assessment [Outcome: 2, 3]
	17-03 Customer requirements [Outcome: 3]

Work Products	
Inputs	Outputs
	17-09 Product requirements [Outcome: 3]
	18-01 Acceptance criteria [Outcome: 2]
	18-08 Supplier selection criteria [Outcome: 5]

5.1.2 ACQ.2 Supplier selection

Process ID	ACQ.2
Process Name	Supplier selection
Process Purpose	The purpose of the Supplier selection process is to choose the organization that is to be responsible for the delivery of the requirements of the project.
Process Outcomes	As a result of successful implementation of Supplier selection process: 1) the supplier selection criteria are established and used to evaluate potential suppliers; 2) the supplier is selected based upon the evaluation of the supplier's proposals, process capabilities, and other factors; and 3) an agreement is established and negotiated between the customer and the supplier;
Base Practices	<p>ACQ.2.BP1: Evaluate stated or perceived supplier capability. Evaluate stated or perceived supplier capability against the stated requirements, according to the supplier selection criteria. [Outcome: 1]</p> <p>NOTE: See Acquisition preparation process (ACQ.1) for definition of supplier selection criteria.</p> <p>ACQ.2.BP2: Evaluate supplier's proposal. Evaluate supplier's proposal against the stated requirements, according to the supplier selection criteria. [Outcome: 2]</p> <p>ACQ.2.BP3: Prepare and negotiate agreement. Negotiate a supplier agreement that clearly expresses the customer expectations that clearly expresses the customer expectation and the relative responsibilities of the supplier and customer. [Outcome: 3]</p>

Work Products	
Inputs	Outputs
	02-01 Commitment / agreement [Outcome: 1,3]
	08-02 Acquisition plan [Outcome: 1]
09-04 Supplier selection policy [Outcome: 2]	09-04 Supplier selection policy [Outcome: 1]
12-01 Request for proposal [Outcome: 2]	
12-04 Supplier proposal response [Outcome: 3]	
	13-04 Communication record [Outcome: 3]
	13-05 Contract review record [Outcome: 3]
13-09 Meeting support record [Outcome: 3]	13-09 Meeting support record [Outcome: 3]
	13-19 Review record [Outcome: 2]

Work Products	
Inputs	Outputs
	14-05 Preferred suppliers register [Outcome: 2]
	15-01 Analysis report [Outcome: 2]
15-13 Assessment / audit report [Outcome: 2]	15-13 Assessment / audit report [Outcome: 1]
	15-21 Supplier evaluation report [Outcome: 1, 2]
17-09 Product requirements [Outcome: 2]	
17-10 Service requirements [Outcome: 2]	
18-08 Supplier selection criteria [Outcome: 2]	18-08 Supplier selection criteria [Outcome: 1]

5.1.3 ACQ.3 Contract agreement

Process ID	ACQ.3
Process Name	Contract agreement
Process Purpose	The purpose of Contract agreement process is to negotiate and approve a contract / agreement that clearly and unambiguously specifies the expectations, responsibilities, work products / deliverables and liabilities of both the supplier(s) and the acquirer.
Process Outcomes	As a result of successful implementation of Contract agreement process: 1) a contract or agreement is negotiated, reviewed, approved and awarded to the supplier(s); 2) mechanisms for monitoring the capability and performance of the supplier(s) and for mitigation of identified risks are reviewed and considered for inclusion in the contract conditions; 3) proposers/tenderers are notified of the result of proposal/tender selection.
Base Practices	<p>ACQ.3.BP1: Negotiate the contract / agreement. Negotiate all relevant aspects of the contract / agreement with the supplier. [Outcome: 1]</p> <p>NOTE: Clarify intellectual right relationship. In the contract, address patent, copyright, confidentiality, proprietary, usage, ownership, warranty and licensing rights associated with the developed products and the reusable off-the-shelf software products.</p> <p>ACQ.3.BP2: Approve contract. The contract is approved by relevant stakeholders. [Outcome: 1]</p> <p>ACQ.3.BP3: Review contract for supplier capability monitoring. Review and consider a mechanism for monitoring the capability and performance of the supplier in the contract conditions. [Outcome: 2]</p> <p>ACQ.3.BP4: Review contract for risk mitigation actions. Review and consider a mechanism for the mitigation of identified risk in the contract conditions. [Outcome: 2]</p> <p>ACQ.3.BP5: Award contract. The contract is awarded to the successful proposer / tenderer. [Outcome: 1]</p> <p>ACQ.3.BP6: Communicate results to tenderers. Notify the results of the proposal / tender selection to proposers / tenders. After contract award, inform all tenderers of the decision. [Outcome: 3]</p>

Work Products	
Inputs	Outputs
	02-00 Contract [Outcome: 1]
	02-01 Commitment / agreement [Outcome: 1, 3]
08-19 Risk management plan [Outcome: 2]	
12-01 Request for proposal [Outcome: 1]	
12-04 Supplier proposal response [Outcome: 1]	
	13-04 Communication record [Outcome: 1, 3]
	13-05 Contract review record [Outcome: 1]
	15-08 Risk analysis report [Outcome:2]
15-18 Process performance report [Outcome: 2]	
17-09 Product requirements [Outcome: 1]	
17-10 Service requirements [Outcome: 1]	

5.1.4 ACQ.4 Supplier monitoring

Process ID	ACQ.4
Process Name	Supplier monitoring
Process Purpose	The purpose of the Supplier monitoring process is to track and assess performance of the supplier against agreed requirements.
Process Outcomes	<p>As a result of successful implementation of Supplier monitoring process:</p> <ol style="list-style-type: none"> 1) joint activities between the customer and the supplier are performed as needed; 2) information on technical progress is exchanged regularly with the supplier; 3) performance of the supplier is monitored against the agreed requirements; and 4) agreement changes, if needed, are negotiated between the acquirer and the supplier and documented in the agreement.
Base Practices	<p>ACQ.4.BP1: Establish and maintain communications. Establish and maintain communications between customer and supplier (i.e. define interfaces, schedule, messages, documents, meetings, joint review). [Outcome: 1, 2]</p> <p>ACQ.4.BP2: Exchange information on technical progress. Use the communication link to exchange information on technical progress of the supply, also covering costs and risks to successful completion. [Outcome: 1, 2]</p> <p>ACQ.4.BP3: Review development with supplier. Review the aspects of the development (technical, quality, cost, and schedule) on a regular basis with the supplier, against the agreed requirements. [Outcome: 3]</p> <p>ACQ.4.BP4: Monitor the acquisition. Monitor the acquisition against the agreed acquisition documentation so that progress can be reviewed and audited to ensure that specified constraints such as cost, schedule, and quality are met. [Outcome: 3]</p>

	ACQ.4.BP5: Agree on changes. Changes proposed by either party are negotiated and the results are documented in the agreement. [Outcome: 4]
--	---

Work Products	
Inputs	Outputs
02-00 Contract [Outcome: 1]	
02-01 Commitment / agreement [Outcome: 3, 4]	02-01 Commitment / agreement [Outcome: 4]
12-04 Supplier proposal response [Outcome: 1]	
	13-01 Acceptance record [Outcome: 3]
	13-04 Communication record [Outcome: 1]
	13-08 Installation record [Outcome: 3]
13-09 Meeting support record [Outcome: 1]	13-09 Meeting support record [Outcome: 1]
13-14 Progress status record [Outcome: 2]	13-14 Progress status record [Outcome: 2]
13-17 Customer request [Outcome: 4]	13-17 Customer request [Outcome: 3]
	13-19 Review record [Outcome: 2]
14-08 Tracking system [Outcome: 3]	
	15-01 Analysis report [Outcome: 3]

5.1.5 ACQ.5 Customer acceptance

Process ID	ACQ.5
Process Name	Customer acceptance
Process Purpose	The purpose of the Customer acceptance process is to approve the supplier's deliverable when all acceptance criteria are satisfied.
Process Outcomes	As a result of successful implementation of Customer acceptance: 1) the delivered software product and/or service are evaluated with regard to the agreement; 2) the customer's acceptance is based on the agreed acceptance criteria; and 3) the software product and/or service is accepted by the customer.
Base Practices	<p>ACQ.5.BP1: Define acceptance criteria. Acceptance criteria are defined on the basis of agreed requirements. [Outcome: 2]</p> <p>NOTE: Refer to Software testing process (ENG.8) and System testing process (ENG.10) to complete acceptance criteria with software / system test definition and execution activities.</p> <p>ACQ.5.BP2: Evaluate the delivered product. Carry out the evaluation of the product and/or service using the defined acceptance criteria. [Outcome: 1, 2]</p> <p>ACQ.5.BP3: Compliance with agreement. Resolve any acceptance issues in accordance with the procedures established in the agreement and confirm that delivered product or service complies with the agreement. [Outcome: 2]</p>

	ACQ.5.BP4: Accept product. Accept the delivered product or service and communicate acceptance to the supplier. [Outcome: 3]
--	--

Work Products	
Inputs	Outputs
02-00 Contract [Outcome: 1]	
02-01 Commitment / agreement [Outcome: 1]	
08-01 Acceptance test plan [Outcome: 1, 2]	
08-02 Acquisition plan [Outcome: 1]	
11-00 Product [Outcome: 3]	
12-04 Supplier proposal response [Outcome: 1]	
	13-01 Acceptance record [Outcome: 3]
	13-07 Problem record [Outcome: 1]
	15-10 Test incident report [Outcome: 2]
17-03 Customer requirements [Outcome: 2]	
	18-01 Acceptance criteria [Outcome: 2]

5.2 Supply Process Group (SPL)

5.2.1 SPL.1 Supplier tendering

Process ID	SPL.1
Process Name	Supplier tendering
Process Purpose	The purpose of Supplier tendering process is to establish an interface to respond to customer inquiries and requests for proposal, prepare and submit proposals, and confirm assignments through the establishing of a relevant agreement / contract.
Process Outcomes	<p>As a result of successful implementation of Supplier tendering process:</p> <ol style="list-style-type: none"> 1) a communication interface is established and maintained in order to respond to customer inquiries and requests for proposal; 2) requests for proposal are evaluated according to defined criteria to determine whether or not to submit a proposal; 3) the need to undertake preliminary surveys or feasibility studies is determined; 4) suitable resources are identified to perform the proposed work; 5) a supplier proposal is prepared and submitted in response to the customer request; and 6) formal confirmation of agreement is obtained.
Base Practices	<p>SPL.1.BP1: Establish communication interface. A communication interface is established and maintained in order to respond to customer inquiries or requests for proposal. [Outcome: 1]</p> <p>SPL.1.BP2: Perform customer enquiry screening. Perform customer enquiry screening to</p>

	<p>ensure source of lead is genuine, the nature or type of product or service is clearly established, and the right person is quickly identified to progress the lead. [Outcome: 1]</p> <p>SPL.1.BP3: Establish customer proposal evaluation criteria. Establish evaluation criteria to determine whether or not to submit a proposal based on appropriate criteria. [Outcome: 2]</p> <p>SPL.1.BP4: Evaluate customer request for proposal. Requests for proposal are evaluated according to appropriate criteria. [Outcome: 2]</p> <p>SPL.1.BP5: Determine need for preliminary evaluations or feasibility studies. Determine need for preliminary evaluations or feasibility studies to ensure that a firm quotation can be made based on available requirements. [Outcome: 3]</p> <p>SPL.1.BP6: Identify and nominate staff. Identify and nominate staff with appropriate competency for the assignment. [Outcome: 4]</p> <p>SPL.1.BP7: Perform preliminary overall estimation. Estimate total costs, resources, and needed delivery date. [Outcome: 4]</p> <p>SPL.1.BP8: Prepare supplier proposal or tender response. A supplier proposal or tender is prepared in response to the customer request. [Outcome: 5]</p> <p>NOTE 1: This may involve the selection of an appropriate solution (organizational or technical) amongst several alternatives in order to best meet requirements.</p> <p>SPL.1.BP9: Negotiate contract / agreement with acquirer. Negotiate all relevant aspects of the contract / agreement with the acquirer. [Outcome: 5, 6]</p> <p>SPL.1.BP10: Establish confirmation of contract / agreement. Formally confirm the contract / agreement to protect the interests of both parties. [Outcome: 6]</p> <p>NOTE 2: The nature of the commitment should be agreed and evidenced in writing. Only authorized signatories should be able to commit to a contract.</p>

5.2.2 SPL.2 Product release

Process ID	SPL.2
Process Name	Product release
Process Purpose	The purpose of Product release process is to control the availability of a product to the intended customer.
Process Outcomes	<p>As a result of the successful implementation of Product release process:</p> <ol style="list-style-type: none"> 1) the contents of the product release are determined; 2) the release is assembled from configured items; 3) the release documentation is defined and produced; 4) the release delivery mechanism and media is determined; 5) release approval is effected against defined criteria; 6) release products are made available to the intended customer; and 7) confirmation of release is obtained.
Base Practices	<p>SPL.2.BP1: Define release products. The products associated with the release are defined, on the basis of agreement or development strategy. [Outcome: 1]</p> <p>NOTE 1: The software product release may include programming tools where these are stated.</p> <p>SPL.2.BP2: Prepare product for delivery. Update and prepare the deliverable product. Establish baseline for the product including user documentation, designs and the product itself. [Outcome: 2]</p> <p>NOTE 2: Product release may consist of software and hardware products constituting a system, or just a software product.</p> <p>SPL.2.BP3: Establish a product release classification and numbering scheme. A product release and classification is established based upon the intended purpose and expectations of the release. [Outcome: 2]</p> <p>SPL.2.BP4: Define the build activities and build environment. A consistent build process is established and maintained. [Outcome: 2]</p> <p>NOTE 3: A consistent build environment should be used based on an environment specification that is communicated to all relevant parties.</p> <p>SPL.2.BP5: Build the release from configured items. The release is built from configured items to ensure integrity. [Outcome: 2]</p> <p>NOTE 4: Where relevant the software product release should identify the target hardware revision before release.</p> <p>SPL.2.BP6: The type, level and duration of support for a release are communicated. The type, level and duration of a release is identified and communicated. [Outcome: 3]</p> <p>SPL.2.BP7: Determine the delivery media type for the release. The media type for product delivery is determined in accordance with the needs of the end user. [Outcome: 4]</p> <p>NOTE 5: The media type for delivery may be intermediate (placed on a media and delivered to</p>

	<p>customer), or direct (such as delivered in firmware as part of the package) or a mix of both. The release may be delivered electronically by placement on a server. The release may also need to be duplicated before delivery.</p> <p>SPL.2.BP8: Identify the packaging for the release media. The packaging for different types of media is identified. [Outcome: 4]</p> <p>NOTE 6: The packaging for certain types of media may need physical or electronic protection, for instance floppy disk mailers or specific encryption techniques.</p> <p>SPL.2.BP9: Define and produce the software product release documentation. Ensure that all documentation to support the release is produced, reviewed, approved and available. [Outcome: 3, 6]</p> <p>SPL.2.BP10: Ensure product release approval before delivery. Criteria for the product release are satisfied before release takes place. [Outcome: 5]</p> <p>SPL.2.BP11: Deliver the release to the intended customer. The product is delivered to the intended customer, with positive confirmation of receipt. [Outcome: 6, 7]</p> <p>NOTE 7: Confirmation of receipt may be achieved by hand, electronically, by post, by telephone or through a distribution service provider.</p> <p>NOTE 8: These practices are typically supported by the Configuration Management process (SUP.8).</p> <p>NOTE 9: Refer to ISO/IEC 9127 for guidance on packaging aspects of software product supply.</p>

5.2.3 SPL.3 Product acceptance support

Process ID	SPL.3
Process Name	Product acceptance support
Process Purpose	The purpose of Product acceptance support process is to assist the customer to achieve confidence in taking ownership of the product.
Process Outcomes	<p>As a result of successful implementation of the Product acceptance support process:</p> <p>1) the product is completed and delivered to the customer;</p> <p>2) the product is put into operation in the customer's environment; and</p> <p>3) customer acceptance tests and reviews are supported.</p> <p>NOTE: Incremental delivery would be in completed increments.</p>
Base Practices	<p>SPL.3.BP1: Deliver product. The product is completed and delivered to the customer with detailed configurations and technical / operational documents. [Outcome: 1]</p> <p>SPL.3.BP2: Adapt product to customer's environment. The product shall be adapted and evaluated in parallel with the existing systems or processes until the acceptance test is passed. [Outcome: 2]</p> <p>SPL.3.BP3: Support customer product evaluation. Provide support for customer reviews and product testing. [Outcome: 3]</p> <p>NOTE: This base practice is closely related to process Joint review process (SUP.4).</p> <p>SPL.3.BP4: Provide training to customer. Provide training and support to the customer as specified in the contract. [Outcome: 3]</p>

5.3 Operation Process Group (OPE)

5.3.1 OPE.1 Operational use

Process ID	OPE.1
Process Name	Operational use
Process Purpose	The purpose of the Operational use process is to ensure the correct and efficient operation of the product for the duration of its intended usage and in its installed environment.
Process Outcomes	As a result of successful implementation of Operational use process: 1) operational risks for the product introduction and operation are identified and monitored; 2) the product is operated in its intended environment according to requirements; and 3) criteria for the operational use are developed that demonstrates compliance with the agreed requirements.
Base Practices	<p>OPE.1.BP1: Identify operational risks. Identify and monitor risks to product operation. [Outcome: 1]</p> <p>OPE.1.BP2: Perform operational testing. Perform operational testing of each release of the product, assessing satisfaction against specified criteria. [Outcome: 2]</p> <p>OPE.1.BP3: Operate the product. Operate the product in its intended environment and in the specified way. [Outcome: 2]</p> <p>OPE.1.BP4: Develop criteria for operational use. Criteria for operational use are developed such that compliance with the agreed requirements can be demonstrated. [Outcome: 3]</p> <p>OPE.1.BP5: Monitor operational use. Provide the capability to monitor operational service on a regular basis, where appropriate against defined criteria. [Outcome: 3]</p>

Inputs	Outputs
17-03 Customer requirements [Outcome: 1, 2, 3]	

5.3.2 OPE.2 Customer support

Process ID	OPE.2
Process Name	Customer support
Process Purpose	The purpose of the Customer support process is to establish and maintain an acceptable level of service through assistance and consultation to the customer to support effective use of the product.
Process Outcomes	<p>As a result of successful implementation of Customer support process:</p> <ol style="list-style-type: none"> 1) service needs for customer support are identified and monitored on an ongoing basis; 2) customer satisfaction with both the support services being provided and the product itself is evaluated on an ongoing basis; 3) operational support is provided by handling customer inquiries and requests and resolving operational problems; and 4) customer support needs are met through delivery of appropriate services.
Base Practices	<p>OPE.2.BP1: Establish product support. Establish a service by which the customer can raise problems and questions encountered in use of the product and receive help in resolving them.[Outcome: 3]</p> <p>NOTE 1: The handling of problems will be performed by Problem resolution management process (SUP.9).</p> <p>OPE.2.BP2: Provide user training. Provide training and documentation, as appropriate, to the user so that the product can be effectively used.[Outcome: 4]</p> <p>OPE.2.BP3: Monitor performance. Monitor the operational performance of the product in order to be aware of problems which might impact level of service.[Outcome: 1]</p> <p>OPE.2.BP4: Determine customer satisfaction level. Determine the level of customer satisfaction with the products and services received.[Outcome: 2]</p> <p>NOTE 2: This may involve, as appropriate, field performance data, surveys, interviews, and studies. In some instances the end-user of the product may be different from the customer of the product. In this case, both the customer and end-user satisfaction levels should be determined.</p> <p>OPE.2.BP5: Benchmark customer satisfaction. Compare and monitor the level of customer satisfaction obtained for the product and services received relative to that of the relevant industry sector, and where possible, with competitors.[Outcome: 2]</p> <p>NOTE 3: It may be necessary to obtain information on competitors from third party sources. It may also be necessary to include information on how competitors define customer satisfaction, measurement techniques, criteria, collection and evaluation methods to provide a meaningful comparison. Where comparative data is not available, absolute targets (e.g. % customers very satisfied, % repeat business) may be used as a basis for planning.</p> <p>OPE.2.BP6: Communicate customer satisfaction. Communicate customer satisfaction data</p>

	throughout the supplier organization, in a manner appropriate to the staff involved and the nature of the findings, and communicate to the customer. [Outcome: 2]

	03-04 Customer satisfaction data [Outcome: 2]
	07-01 Customer satisfaction survey [Outcome: 2]
07-08 Service level measure [Outcome: 1]	
13-07 Problem record [Outcome: 3]	13-07 Problem record [Outcome: 3]
13-17 Customer request [Outcome: 3]	
	15-20 Service level performance [Outcome: 4]
17-10 Service requirements [Outcome: 2]	17-10 Service requirements [Outcome: 1]

5.4 Engineering Process Group (ENG)

5.4.1 ENG.1 Requirements elicitation

Process ID	ENG.1
Process Name	Requirements elicitation
Process Purpose	The purpose of the Requirements elicitation process is to gather, process, and track evolving customer needs and requirements throughout the life of the product and/or service so as to establish a requirements baseline that serves as the basis for defining the needed work products. Requirements elicitation may be performed by the acquirer or the developer of the system.
Process Outcomes	As a result of successful implementation of Requirements elicitation process: <ul style="list-style-type: none"> 1) continuing communication with the customer is established; 2) agreed customer requirements are defined and baselined; 3) a change mechanism is established to evaluate and incorporate changes to customer requirements into the baselined requirements based on changing customer needs; 4) a mechanism is established for continuous monitoring of customer needs; 5) a mechanism is established for ensuring that customers can easily determine the status and disposition of their requests; and 6) enhancements arising from changing technology and customer needs are identified and their impact is managed.
Base Practices	ENG.1.BP1: Obtain customer requirements and requests. Obtain and define customer requirements and requests through direct and continuous solicitation of customer and user input. [Outcome: 1,4]

	<p>NOTE 1: Requirements may be obtained also through review of customer business proposals, target operating and hardware environment, and other documents bearing on customer requirements.</p> <p>ENG.1.BP2: Understand customer expectations. Ensure that both supplier and customer understand each requirement in the same way. Review with customers their requirements and requests to better understand their needs and expectations and to check the feasibility and appropriateness of their requirements. [Outcome: 6]</p> <p>NOTE 2: Environmental, legal and other constraints that may be external to the customer need to be considered.</p> <p>NOTE 3: Examples of techniques to review with customers their requirements and requests include observation of existing systems, prototypes, simulations, models, technology demonstrations, document excerpts, scenario descriptions and dialogues.</p> <p>ENG.1.BP3: Agree on requirements. Obtain agreement across teams on the customer requirements, obtaining the appropriate sign-offs by representatives of all teams and other parties contractually bound to work to these requirements. [Outcome: 2]</p> <p>ENG.1.BP4: Establish customer requirements baseline. Formalize the customer requirements and establish as a baseline for project use and monitoring against customer needs. [Outcome: 2,3]</p> <p>ENG.1.BP5: Manage customer requirements changes. Manage all changes made to the customer requirements against the customer requirements baseline to ensure enhancements resulting from changing technology and customer needs are identified and that those who are affected by the changes are able to assess the impact and risks and initiate appropriate change control and risk mitigation actions. [Outcome: 4,5]</p> <p>NOTE 4: The tracking of requirements is handled in Configuration management process (SUP.8).</p> <p>ENG.1.BP6: Establish customer query mechanism. Provide a means by which the customer can be aware of the status and disposition of their requirements changes. [Outcome: 5]</p> <p>NOTE 5: This may include joint meetings with the customer or formal communication to review the status for their requirements and requests; Refer to the Joint review process (SUP.4).</p>

5.4.2 ENG.2 System requirements analysis

Process ID	ENG.2
Process Name	System requirements analysis
Process Purpose	The purpose of the System requirements analysis process is to transform the defined stakeholder requirements into a set of desired system technical requirements that will guide the design of the system.
Process Outcomes	<p>As a result of successful implementation of System requirements analysis process:</p> <ol style="list-style-type: none"> 1) a defined set of system functional and non-functional requirements describing the problem to be solved are established; 2) the appropriate techniques are performed to optimize the preferred project solution; 3) system requirements are analyzed for correctness and testability; 4) the impact of the system requirements on the operating environment are understood; 5) the requirements are prioritized, approved and updated as needed; 6) consistency and traceability is established between the system requirements and the customer's requirements baseline; 7) changes to the baseline are evaluated for cost, schedule and technical impact; and 8) the system requirements are communicated to all affected parties and baselined.
Base Practices	<p>ENG.2.BP1: Establish system requirements. Use the stakeholder requirements as the basis for defining the required functions and capabilities of the system and document in a system requirements baseline. Consider feasibility of the project solution using appropriate techniques. [Outcome: 1, 2]</p> <p>NOTE 1: Appropriate techniques for solution analysis may include: feasibility studies, case studies, prototyping, formal languages and workshops.</p> <p>ENG.2.BP2: Optimize project solution. Appropriate techniques are performed to optimize the preferred solution. Consider and analyze alternate solutions to achieve an optimum project solution. [Outcome: 2]</p> <p>ENG.2.BP3: Analyze system requirements. Prioritize requirements and analyze the prioritized requirements for correctness, completeness, consistency, feasibility and testability, identifying the necessary elements of the system. Identify changes to the operating environment. [Outcome: 3, 4]</p> <p>NOTE 2: Any derived requirements are also identified.</p> <p>ENG.2.BP4: Evaluate and update system requirements. Evaluate the impact of proposed changes and new requirements for cost, schedule, risk and technical impact, approve or reject changes and new requirements, and update the system requirements baseline. [Outcome: 5, 7]</p> <p>ENG.2.BP5: Ensure consistency. Ensure consistency of requirements elicitation to system requirements analysis. Consistency is supported by establishing and maintaining traceability between customer requirements and the system requirements when needed. [Outcome: 6]</p> <p>ENG.2.BP6: Communicate system requirements. Establish communication mechanisms for dissemination of system requirements, and updates to requirements to all parties who will be using them. [Outcome: 8]</p>

	17-12 System requirements [Outcome: 1, 5]

5.4.3 ENG.3 System architectural design

Process ID	ENG.3
Process Name	System architectural design
Process Purpose	The purpose of the System architectural design process is to identify which system requirements should be allocated to which elements of the system.
Process Outcomes	<p>As a result of successful implementation of System architectural design process:</p> <ol style="list-style-type: none"> 1) a system architecture design is defined that identifies the elements of the system and meets the defined requirements; 2) the system's functional and non-functional requirements are addressed; 3) the requirements are allocated to the elements of the system; 4) internal and external interfaces of each system element are defined; 5) verification between the system requirements and the system architecture is performed; 6) the requirements allocated to the system elements and their interfaces are traceable to the customer's requirements baseline; 7) consistency and traceability between the system requirements and system architecture design is maintained; 8) the system requirements, the system architecture design, and their relationships are baselined and communicated to all affected parties.
Base Practices	<p>ENG.3.BP1: Describe system architecture. Establish the top-level system architecture that identifies elements of hardware, software and manual-operations. [Outcome: 1]</p> <p>ENG.3.BP2: Allocate requirements. Allocate all system requirements to the elements of the top-level system architecture. [Outcome: 2, 3]</p> <p>ENG.3.BP3: Define interfaces. Develop and document the internal and external interfaces of</p>

	<p>each system element. [Outcome: 4]</p> <p>ENG.3.BP4: Verify system architecture. Ensure that the system architecture meets all stakeholder and system requirements. [Outcome: 5, 6]</p> <p>ENG.3.BP5: Evaluate alternative system architectures. Define evaluation criteria for architecture design. Evaluate alternative system architectures according to the defined criteria. Record the rationale for choosing the current system architecture. [Outcome: 1]</p> <p>NOTE: Evaluation criteria may include quality characteristics (modularity, maintainability, expandability, scalability, reliability, security and usability) and results of make-buy-reuse analysis.</p> <p>ENG.3.BP6: Ensure consistency. Ensure consistency of system requirements analysis to system architectural design. Consistency is supported by establishing and maintaining traceability between system requirements and the system architecture design when needed. [Outcome: 7]</p> <p>ENG.3.BP7: Communicate system architecture design. Establish communication mechanisms for dissemination of the system architecture design to all parties who will be using them. [Outcome: 8]</p>
--	--

5.4.4 ENG.4 Software requirements analysis

Process ID	ENG.4
Process Name	Software requirements analysis
Process Purpose	The purpose of the Software requirements analysis process is to establish the requirements of the software elements of the system.
Process Outcomes	<p>As a result of successful implementation of Software requirements analysis process:</p> <p>1) the requirements allocated to the software elements of the system and their interfaces are defined;</p> <p>2) software requirements are analyzed for correctness and testability;</p>

	<p>3) the impact of software requirements on the operating environment are understood;</p> <p>4) consistency and traceability are established between the software requirements and system requirements;</p> <p>5) prioritization for implementing the software requirements is defined;</p> <p>6) the software requirements are approved and updated as needed;</p> <p>7) changes to the software requirements are evaluated for cost, schedule and technical impact; and</p> <p>8) the software requirements are baselined and communicated to all affected parties.</p>
Base Practices	<p>ENG.4.BP1: Specify software requirements. Specify software requirements. Define and prioritize functional and nonfunctional requirements of the software elements of the system and their interfaces and document in a software requirements specification. Analyze the software requirements for correctness, completeness, consistency, feasibility and testability. Identify any derived requirements. [Outcome: 1, 2, 5]</p> <p>NOTE 1: Software quality characteristics are described in ISO/IEC 9126-1.</p> <p>ENG.4.BP2: Determine operating environment impact. Determine the interfaces between the software requirements and other elements of the operating environment, and the impact that the requirements will have. [Outcome: 3]</p> <p>NOTE 2: The operating environment includes tasks performed by, or other systems used by, the intended users of the software product.</p> <p>ENG.4.BP3: Develop criteria for software testing. Use the software requirements to define acceptance criteria for the software product tests. Software product tests should demonstrate compliance with the software requirements. [Outcome: 2]</p> <p>ENG.4.BP4: Ensure consistency. Ensure consistency of system requirements analysis to software requirements analysis. Consistency is supported by establishing and maintaining traceability between system requirements and the software requirements when needed. [Outcome: 4]</p> <p>ENG.4.BP5: Evaluate and update software requirements. Evaluate the requirements with the customer, evaluate the impact of proposed changes for cost, schedule and technical impact, approve or reject changes, and update the software requirements specification. [Outcome: 6, 7]</p> <p>ENG.4.BP6: Communicate software requirements. Establish communication mechanisms for dissemination of software requirements, and updates to requirements to all parties who will be using them. [Outcome: 8]</p>

5.4.5 ENG.5 Software design

Process ID	ENG.5
Process Name	Software design
Process Purpose	The purpose of the Software design process is to provide a design for the software that implement and can be verified against the requirements.
Process Outcomes	<p>As a result of successful implementation of Software design process:</p> <ol style="list-style-type: none"> 1) a software architectural design is developed and baselined that describes the software elements that will implement the software requirements; 2) internal and external interfaces of each software elements are defined; 3) a detailed design is developed that describes software units that can be built and tested; and 4) consistency and traceability are established between software requirements and software design.
Base Practices	<p>ENG.5.BP1: Describe software architecture. Transform the software requirements into a software architecture design that describes the top-level structure and identifies its major software elements. [Outcome: 1]</p> <p>NOTE 1: Examples of major software elements include data storage and access (e.g. Database), communication mechanism, business logic and user interface.</p> <p>ENG.5.BP2: Define interfaces. Specify and document the external and internal interfaces between the software elements. [Outcome: 2]</p> <p>ENG.5.BP3: Develop detailed design. Decompose the software architectural design into a detailed design for each software element describing all software units to be produced and tested. Document software units and interfaces in a software design document. [Outcome: 3]</p> <p>ENG.5.BP4: Evaluate alternative software architectures. Define evaluation criteria for software architecture design. Evaluate alternative software architectures according to the defined criteria. Record the rationale for choosing the current software architecture. [Outcome 3]</p> <p>NOTE 2: Evaluation criteria may include software quality characteristics (modularity, maintainability, expandability, scalability, reliability, security and usability) and results of make-buy-reuse analysis.</p> <p>ENG.5.BP5: Analyze the design for testability. Analyze the design for correctness and testability to ensure that the software units can be built and tested. [Outcome: 3]</p> <p>ENG.5.BP6: Ensure consistency. Ensure consistency of software requirements analysis to</p>

	software design. Consistency is supported by establishing and maintaining traceability between software requirements and the software design when needed. [Outcome: 4]

5.4.6 ENG.6 Software construction

Process ID	ENG.6
Process Name	Software construction
Process Purpose	The purpose of the Software construction process is to produce executable software units that properly reflect the software design.
Process Outcomes	<p>As a result of successful implementation of Software construction process:</p> <ul style="list-style-type: none"> 1) verification criteria are defined for all software units against their requirements; 2) software units defined by the design are produced; 3) consistency and traceability are established between software requirements and design and software units; and 4) verification of the software units against the requirements and the design is accomplished.
Base Practices	<p>ENG.6.BP1: Develop unit verification procedures. Develop and document procedures and criteria for verifying that each software unit satisfies its design requirements. The verification procedure includes unit test cases, unit test data and code review. [Outcome: 1]</p> <p>ENG.6.BP2: Develop software units. Develop and document the executable representations of each software unit. Update test requirements and user documentation. [Outcome: 2]</p> <p>NOTE 1: User documentation includes preliminary versions of installation, operation and maintenance documentation.</p> <p>ENG.6.BP3: Ensure consistency. Ensure consistency of software design to software construction. Consistency is supported by establishing and maintaining traceability between software requirements and design and the software units when needed. [Outcome: 3]</p> <p>ENG.6.BP4: Verify software units. Verify that each software unit satisfies its design requirements by executing the specified unit verification procedures and document the results. [Outcome: 4]</p> <p>NOTE 2: Code can be verified by various techniques such as static code analysis, code review,</p>

	etc.

5.4.7 ENG.7 Software integration

Process ID	ENG.7
Process Name	Software integration
Process Purpose	The purpose of the Software integration process is to combine the software units, producing integrated software items, consistent with the software design, that demonstrate that the functional and non-functional software requirements are satisfied on an equivalent or complete operational platform.
Process Outcomes	<p>As a result of successful implementation of Software integration process:</p> <ol style="list-style-type: none"> 1) an integration strategy is developed for software units consistent with the software design and the prioritized software requirements; 2) verification criteria for software items are developed that ensure compliance with the software requirements allocated to the items; 3) software items are verified using the defined criteria; 4) software items defined by the integration strategy are produced;

	<p>5) results of integration testing are recorded;</p> <p>6) consistency and traceability are established between software design and software items; and</p> <p>7) a regression strategy is developed and applied for re-verifying software items when a change in software units (including associated requirements, design and code) occur.</p>
Base Practices	<p>ENG.7.BP1: Develop software integration strategy. Develop the strategy for integrating software units considering the software requirements. Identify software items based on the software architecture and define a sequence or order for integrating and testing them. [Outcome: 1]</p> <p>NOTE: Examples for the order of software item integration include top-level items, bottom-level items, critical items, functional items, complete skeleton first and items as-available.</p> <p>ENG.7.BP2: Develop tests for integrated software items. Describe the tests to be run against each integrated software item, including the verification of the interfaces, indicating software requirements being checked, input data and verification criteria. [Outcome: 2]</p> <p>ENG.7.BP3: Integrate software item. Integrate the software units according to the integration strategy to form a software item. [Outcome: 4]</p> <p>ENG.7.BP4: Test integrated software items. Test each integrated software item on an operational platform or suitable equivalent platform, against the verification criteria, and record the results. Update user documentation as necessary. [Outcome: 3, 5]</p> <p>ENG.7.BP5: Ensure consistency. Ensure consistency of software design to software integration. Consistency is supported by establishing and maintaining traceability between software design and the software items when needed. [Outcome: 6]</p> <p>ENG.7.BP6: Regression test integrated software items. Develop a software regression test strategy for re-testing the integrated software items. If changes are made to software units, designs or requirements carry out regression testing according to this strategy. [Outcome: 7]</p>

5.4.8 ENG.8 Software testing

Process ID	ENG.8
Process Name	Software testing
Process Purpose	The purpose of the Software testing process is to confirm that the integrated software product meets its defined requirements.
Process Outcomes	<p>As a result of successful implementation of Software testing process:</p> <ol style="list-style-type: none"> 1) criteria for the integrated software is developed that demonstrates compliance with the software requirements; 2) integrated software is verified using the defined criteria; 3) test results are recorded; and 4) a regression strategy is developed and applied for re-testing the integrated software when a change in software items is made.
Base Practices	<p>ENG.8.BP1: Develop tests for integrated software product. Describe the tests to be run against the integrated software product, indicating software requirements being checked, input data, and verification criteria. The set of tests should demonstrate compliance with the software requirements. [Outcome: 1]</p> <p>NOTE: Tests and test data can be developed during Software requirements analysis process (ENG.4), Software design process (ENG.5) and Software construction process (ENG.6).</p> <p>ENG.8.BP2: Test integrated software product. Test the integrated software product against the verification criteria, and record the results. Update user documentation as necessary. [Outcome: 2, 3]</p> <p>ENG.8.BP3: Regression test integrated software. Develop a software regression test strategy for re-testing the integrated software product. If changes are made to software items carry out regression testing according to the strategy. [Outcome: 4]</p>

5.4.9 ENG.9 System integration

Process ID	ENG.9
Process Name	System integration
Process Purpose	The purpose of the System integration process is to integrate the system elements (including software items, hardware items, manual operations, and other systems, as necessary) to produce a complete system that will satisfy the system design and the customers' expectations expressed in the system requirements.
Process Outcomes	<p>As a result of successful implementation of System integration process:</p> <ol style="list-style-type: none"> 1) a strategy is developed to integrate the system according to the priorities of the system requirements; 2) criteria is developed to verify compliance with the system requirements allocated to the system elements, including the interfaces between system elements; 3) the system integration is verified using the defined criteria; 4) a regression strategy is developed and applied for re-testing the system [elements] when changes are made; 5) consistency and traceability are established between the system design and the integrated system elements; and 6) an integrated system, demonstrating compliance with the system design and validation that a complete set of useable deliverable system elements exists, is constructed.
Base Practices	<p>ENG.9.BP1: Develop system integration and regression test strategies. Develop strategies for integrating system elements consistent with the system architecture and requirements, and for re-testing system elements should a given system element be changed. [Outcome: 1, 4]</p> <p>ENG.9.BP2: Develop tests for system elements. Describe the tests to be run against each system element, indicating requirements being checked, input data, system elements needed to perform the test, and verification criteria. [Outcome: 2]</p> <p>ENG.9.BP3: Integrate system elements. Integrate system elements according to the system integration strategy. [Outcome: 3]</p> <p>ENG.9.BP4: Test system elements. Test each system element and ensure that it satisfies its requirements, and document the results. [Outcome: 3]</p> <p>ENG.9.BP5: Regression test system elements. If changes are made to system elements, carry out regression testing as defined in the regression test strategy. [Outcome: 4]</p> <p>ENG.9.BP6: Ensure consistency. Ensure consistency of system architectural design to system integration. Consistency is supported by establishing and maintaining traceability between</p>

	<p>system designs and the system elements when needed. [Outcome: 5]</p> <p>ENG.9.BP7: Build complete system of system elements. Identify and integrate system elements to produce a complete system ready for system testing according to the system integration strategy. [Outcome: 6]</p>

5.4.10 ENG.10 System testing

Process ID	ENG.10
Process Name	System testing
Process Purpose	The purpose of the Systems testing process is to ensure that the implementation of each system requirement is tested for compliance and that the system is ready for delivery.
Process Outcomes	<p>As a result of successful implementation of System testing process:</p> <ol style="list-style-type: none"> 1) criteria for the integrated system is developed that demonstrates compliance with system requirements; 2) the integrated system is verified using the defined criteria; 3) test results are recorded; and 4) a regression strategy is developed and applied for re-testing the integrated system should a change be made to existing system elements.

Base Practices	<p>ENG.10.BP1: Develop tests for system. Describe the tests to be run against the complete system, indicating system requirements being checked, input data, and validation criteria. [Outcome: 1]</p> <p>NOTE: This can be performed during System requirements analysis process (ENG.2).</p> <p>ENG.10.BP2: Test integrated system. Test the integrated system and ensure that it satisfies the system requirements, and record the results. [Outcome: 2, 3]</p> <p>ENG.10.BP3: Regression test integrated system. Develop a system regression test strategy for re-testing the system should a system element be changed. If changes are made to system elements carry out regression testing as defined in the system regression test strategy. [Outcome: 1, 4]</p> <p>ENG.10.BP4: Confirm system readiness. Ensure that the system is ready for delivery and communicate system test results to all affected parties. [Purpose]</p>

5.4.11 ENG.11 Software installation

Process ID	ENG.11
Process Name	Software installation
Process Purpose	The purpose of the Software installation process is to install the software product that meets the agreed requirements in the target environment.
Process Outcomes	<p>As a result of successful implementation of Software installation process:</p> <ol style="list-style-type: none"> 1) a software installation strategy is developed; 2) criteria for software installation is developed that demonstrates compliance with the software installation requirements; 3) the software product is installed in the target environment; and 4) assure that the software product is ready for use in its intended environment.

Base Practices	<p>ENG.11.BP1: Develop installation strategy. Develop a software installation strategy to install the software product in the target environment in agreement with the customer and the operating organization. [Outcome: 1]</p> <p>ENG.11.BP2: Establish installation criteria. Based on the installation requirements, develop criteria for the environment where the software will be installed. [Outcome: 2]</p> <p>ENG.11.BP3: Specify the requirements for adaptation. Specify the requirements for adaptation of the system for its intended environment. [Outcome: 2]</p> <p>ENG.11.BP4: Adapt the system. Adapt the system to meet the requirements for operation. [Outcome 2]</p> <p>ENG.11.BP5: Install software product. Install the software product according to the software installation strategy. Document the events and results. [Outcome: 3]</p> <p>ENG.11.BP6: Confirm product readiness. Assure that the software product is ready for use in its intended environment. [Outcome: 4]</p> <p>NOTE: Software installation process is linked to Product acceptance support process (SPL.3).</p>

5.4.12 ENG.12 Software and system maintenance

Process ID	ENG.12
Process Name	Software and system maintenance
Process Purpose	<p>The purpose of the Software and system maintenance process is to modify a system/software product after delivery to correct faults, improve performance or other attributes, or to adapt to a changed environment.</p> <p>NOTE: The objective is to modify and/or retire existing system/software products while</p>

	preserving the integrity of organizational operations.
Process Outcomes	<p>As a result of successful implementation of the Software and system maintenance process:</p> <ol style="list-style-type: none"> 1) a maintenance strategy is developed to manage modification, migration and retirement of products according to the release strategy; 2) the impact of changes to the existing system on organization, operations or interfaces are identified; 3) affected system/software documentation is updated as needed; 4) modified products are developed with associated tests that demonstrate that requirements are not compromised; 5) product upgrades are migrated to the customer's environment; 6) on request, products are retired from use in a controlled manner that minimizes disturbance to the customers; and 7) the system/software modification is communicated to all affected parties.
Base Practices	<p>ENG.12.BP1: Develop maintenance strategy. Develop the strategy for managing modification, migration, and retirement of products consistent with the maintenance requirements, release strategy and possible warranty policies. [Outcome: 1]</p> <p>ENG.12.BP2: Analyze user problems and changes. Analyze user problems and requests and required changes, evaluating the possible impact of different options for modifying the existing system and software, system interfaces, and requirements. Document the selected solution. [Outcome: 2]</p> <p>NOTE: This Base Practice links to the Problem resolution management process (SUP.9).</p> <p>ENG.12.BP3: Implement and test modifications. Determine which products need to be changed. Implement, test and document the selected modifications, demonstrating that the system and software requirements and integrity will not be compromised by the upgrade. [Outcome: 3, 4]</p> <p>ENG.12.BP4: Upgrade user system. Migrate the upgraded system and software with applied modifications to the user's environment. Provide for, as appropriate: notification of the migration plans and activities; parallel operation of the old and new systems; and user training. Perform a post-operation review to assess the impact of the modification. [Outcome: 5]</p> <p>ENG.12.BP5: Retire software product. Following approval, retire the obsolete system from the user environment, providing for, as appropriate: notification of the retirement plans and activities; parallel operation with replacement systems; conversion of data to new or replacement systems; archiving of system and data files; and user training or support. [Outcome: 6]</p> <p>ENG.12.BP6: Communicate modifications. Establish communication mechanisms for dissemination of system and software modifications to all parties who will be affected. [Outcome: 7]</p>

5.5 Supporting Process Group (SUP)

5.5.1 SUP.1 Quality assurance

Process ID	SUP.1
Process Name	Quality assurance
Process Purpose	The purpose of the Quality assurance process is to provide assurance that work products and processes comply with predefined provisions and plans.
Process Outcomes	As a result of successful implementation of the Quality assurance process:

	<p>1) a strategy for conducting quality assurance is developed;</p> <p>2) evidence of quality assurance is produced and maintained;</p> <p>3) problems and/or non-conformance with agreed requirements are identified and recorded; and</p> <p>4) adherence of products, processes and activities to the applicable standards, procedures and requirements are verified.</p>
Base Practices	<p>SUP.1.BP1: Develop a strategy for product and process quality assurance. A project level strategy for conducting quality assurance is developed. [Outcome: 1]</p> <p>NOTE 1: A project level strategy would normally be developed, that is consistent with the organizational Quality Management strategy.</p> <p>NOTE 2: Quality assurance process determines the objectives for, and monitors the execution of the related processes: Verification process (SUP.2), Validation process (SUP.3), Joint review process (SUP.4), and Audit process (SUP.5).</p> <p>SUP.1.BP2: Define quality records. Quality records are defined that demonstrate conformance of process and work products to their quality requirements. [Outcome: 3]</p> <p>SUP.1.BP3: Assure the quality of project process activities and project work products. Carry out a series of activities to provide assurance, with the required level of confidence, that the project processes have followed specified standards and that the work products meet the quality requirements. [Outcome: 2,4]</p> <p>SUP.1.BP4: Identify and record problems and non-conformances. Problems and non-conformances are identified and recorded and then reported to appropriate stakeholders for information and action. [Outcome: 3]</p> <p>SUP.1.BP5: Act on non-conformances. Deviations or non-conformance with agreed requirements or organizational quality goals are analyzed and resolved. [Outcome: 4]</p>

5.5.2 SUP.2 Verification

Process ID	SUP.2
Process Name	Verification
Process Purpose	The purpose of the Verification process is to confirm that each software work product and/or service of a process or project properly reflects the specified requirements.
Process Outcomes	<p>As a result of successful implementation of the Verification process:</p> <ol style="list-style-type: none"> 1) a verification strategy is developed and implemented; 2) criteria for verification of all required software work products is identified; 3) required verification activities are performed; 4) defects are identified and recorded; and 5) results of the verification activities are made available to the customer and other involved parties.
Base Practices	<p>SUP.2.BP1: Develop verification strategy. Develop and implement a verification strategy, including verification activities with associated methods, techniques, and tools; work product or processes under verification; degrees of independence for verification and schedule for performing these activities. [Outcome: 1]]</p> <p>NOTE. Software verification provides objective evidence that the design outputs of a particular phase of the software development life cycle meet all of the specified requirements for that phase.</p> <p>SUP.2.BP2: Develop criteria for verification. Develop the criteria for verification of all required work products. [Outcome: 2]</p> <p>SUP.2.BP3: Conduct verification. Verify identified work products according to specified strategy. [Outcome: 3]</p> <p>SUP.2.BP4: Determine actions for verification results. Defects detected by the verification should be identified, recorded and entered into the Problem resolution process (SUP.9). [Outcome: 4]</p> <p>SUP.2.BP5: Make verification results available to the stakeholders. The verification results should be made available to the stakeholders, including the customers and other involved parties. [Outcome: 5]</p>

5.5.3 SUP.3 Validation

Process ID	SUP.3
Process Name	Validation
Process Purpose	The purpose of the Validation process is to confirm that the requirements for a specific intended use of the software work product are fulfilled.
Process Outcomes	<p>As a result of successful implementation of the Validation process:</p> <ol style="list-style-type: none"> 1) a validation strategy is developed and implemented; 2) criteria for validation of all required work products is identified; 3) required validation activities are performed; 4) problems are identified and recorded; 5) evidence is provided that the software work products as developed are suitable for their intended use; and 6) results of the validation activities are made available to the customer and other involved parties.
Base Practices	<p>SUP.3.BP1: Develop validation strategy. Develop and implement a validation strategy, including validation activities with associated methods, techniques, and tools; work product or processes under validation; degrees of independence for validation and schedule for performing these activities. [Outcome: 1]</p> <p>NOTE: Validation aims to confirm by examination and provision of objective evidence that</p>

	<p>software or system specifications conform to user needs and intended uses, and the particular requirements implemented through software product can be consistently fulfilled.</p> <p>SUP.3.BP2: Develop validation criteria. Develop the criteria for validation of all required work products. [Outcome: 2]</p> <p>SUP.3.BP3: Perform validation activities. Conduct validation activities using identified techniques, processes, and test cases against requirements and quality standards. The results of validation activities are recorded. [Outcome: 3]</p> <p>SUP.3.BP4: Identify problems. Issues detected by the validation process should be identified, recorded and entered into the Problem resolution management process (SUP.9). [Outcome: 4]</p> <p>SUP.3.BP5: Provide validation data. Provide validation data resulting from carrying out validation activities. Validate that the product satisfies its intended use by review of validation activities results, and the resolution of issues raised. [Outcome: 5]</p> <p>SUP.3.BP6: Make validation results available to the customer and other involved parties. The validation results should be made available to the customer and other involved parties. [Outcome: 6]</p>

5.5.4 SUP.4 Joint review

Process ID	SUP.4
Process Name	Joint review
Process Purpose	The purpose of the Joint review process is to maintain a common understanding with the

	stakeholders of the progress against the objectives of the agreement and what should be done to help ensure development of a product that satisfies the stakeholders. Joint reviews are at both project management and technical levels and are held throughout the life of the project.
Process Outcomes	<p>As a result of successful implementation of the Joint review process:</p> <ol style="list-style-type: none"> 1) management and technical reviews are held based on the needs of the project; 2) the status and products of an activity of a process are evaluated through joint review activities between the stakeholders; 3) review results are made known to all affected parties; 4) action items resulting from reviews are tracked to closure; and 5) problems are identified and recorded.
Base Practices	<p>SUP.4.BP1: Identify reviews. Identify the schedule, scope and participants of management and technical reviews, based on the needs of the project. [Outcome: 1]</p> <p>SUP.4.BP2: Prepare joint review. Collect, prepare and distribute review material as appropriate in preparation for the review. [Outcome: 1]</p> <p>SUP.4.BP3: Conduct joint reviews. Conduct joint management and technical reviews. Record the review results as planned. [Outcome: 2]</p> <p>SUP.4.BP4: Distribute the results. The review results should be made available to all affected parties. [Outcome: 3]</p> <p>SUP.4.BP5: Determine actions for review results. Analyze review report; identify and record the problems; propose resolution(s) for the review results; determine priority for actions. [Outcome: 5]</p> <p>SUP.4.BP6: Track actions for review results. Track actions for resolution of identified problems in a review; report and document changes to work products and processes. [Outcome: 4]</p>

5.5.5 SUP.5 Audit

Process ID	SUP.5
Process Name	Audit
Process Purpose	The purpose of the Audit process is to independently determine compliance of selected products and processes with the requirements, plans and agreement, as appropriate.
Process Outcomes	<p>As a result of successful implementation of the Audit process:</p> <ol style="list-style-type: none"> 1) an audit strategy is developed and implemented; 2) compliance of selected software work products and/or services or processes with requirements, plans and agreement is determined according to the audit strategy; 3) the conduct of audits by an appropriate independent party are performed; and 4) problems detected during an audit are identified and communicated to those responsible for corrective action, and resolution.
Base Practices	<p>SUP.5.BP1: Develop and implement an audit strategy. An audit strategy is implemented defining purpose, scope, milestones, audit criteria and audit team. [Outcome: 1]</p> <p>SUP.5.BP2: Select auditors. Independent, impartial and objective auditors are selected. [Outcome: 3]</p> <p>SUP.5.BP3: Audit for conformance against the requirements. Selected work products, services or processes are audited to determine their conformance with their requirements and planned arrangements. Non-conformances are recorded. [Outcome: 2]</p> <p>SUP.5.BP4: Prepare and distribute an audit report. Auditor develops and distributes an audit report. [Outcome: 3, 4]</p> <p>SUP.5.BP5: Take corrective action. Corrective action is taken to address non-conformances by the assigned responsible person. The corrective action may result in immediate action to resolve the non-conformity. It may also result in other corrective action after root cause analysis has been undertaken. [Outcome: 4]</p> <p>SUP.5.BP6: Track resolution. Corrective actions are tracked to resolution. The auditor may</p>

	review non-conformance resolutions and their results. [Outcome: 4]

5.5.6 SUP.6 Product evaluation

Process ID	SUP.6
Process Name	Product evaluation
Process Purpose	The purpose of the Product evaluation process is to ensure through systematic examination and measurement that a product meets the stated and implied needs of the users of that product.
Process Outcomes	<p>As a result of successful implementation of this Product evaluation process:</p> <ol style="list-style-type: none"> 1) the requirements for evaluation are established; 2) the criteria for product evaluation is identified; 3) the methods to be employed for evaluation are defined and the activities needed are identified and performed; 4) measures are collected and the results assessed against defined criteria; and 5) results of the product evaluation activities are made available to the interested parties.
Base Practices	<p>SUP.6.BP1: Establish general requirements for product evaluation. Establish the general requirements for product evaluation, including the purpose of the evaluation and the types of products to be evaluated, based on the stated and implied needs of the users of that product. [Outcome: 1]</p> <p>SUP.6.BP2: Specify measures. Identify and develop an appropriate set of measures based on</p>

	<p>the general requirements and the quality model(s) for product evaluation. [Preparation for Outcome: 2]</p> <p>NOTE 1: Measures for product evaluation are provided by ISO/IEC 9126.</p> <p>SUP.6.BP3: Specify the criteria. Specify the criteria for the evaluation, based on a selected set of measurements and the rating levels for those measurements. [Outcome: 2]</p> <p>SUP.6.BP4: Identify methods for the evaluation. Identify a set of methods to be used for the evaluation. [Outcome: 3]</p> <p>NOTE 2: Processes for software product evaluation are provided by ISO/IEC 14598.</p> <p>SUP.6.BP5: Identify the activities. Identify the activities to be performed for the product evaluation, based on the general requirements, criteria and the methods. [Outcome: 3]</p> <p>SUP.6.BP6: Perform the evaluation. Perform the identified activities for product evaluation. [Outcome: 3]</p> <p>SUP.6.BP7: Analyze results against defined criteria. Analyze the results from the evaluation and compare them against the defined criteria. [Outcome: 4]</p> <p>SUP.6.BP8: Communicate results. Disseminate the results from the product evaluation to all interested parties. [Outcome: 5]</p>

5.5.7 SUP.7 Documentation

Process ID	SUP.7
Process Name	Documentation
Process Purpose	The purpose of the Documentation process is to develop and maintain the recorded information produced by a process.
Process Outcomes	<p>As a result of successful implementation of the Documentation process:</p> <ol style="list-style-type: none"> 1) a strategy identifying the documentation to be produced during the life cycle of a product or service is developed; 2) the standards to be applied for the development of the documentation are identified; 3) documentation to be produced by the process or project is identified; 4) the content and purpose of all documentation is specified, reviewed and approved; 5) documentation is developed and made available in accordance with identified standards; and 6) documentation is maintained in accordance with defined criteria.
Base Practices	<p>SUP.7.BP1: Develop documentation management strategy. Determine documentation management strategy which addresses what should be documented within which organizational entity, at which stages in the lifecycle of the product / service. [Outcome: 1]</p> <p>NOTE 1: Refer to ISO/IEC 9294 for guidelines for management of software documentation.</p> <p>SUP.7.BP2: Establish standards for documents. Establish standards for developing, modifying and maintaining documents. [Outcome: 2]</p> <p>SUP.7.BP3: Specify document requirements. Specify requirements for documents such as format, title, date, identifier, version history, author[s], reviewer, authorizer, outline of contents, purpose and distribution list. [Outcome: 2, 4]</p> <p>SUP.7.BP4: Identify the documents to be produced. For any given life cycle development, identify the documents to be produced. [Outcome: 3]</p> <p>SUP.7.BP5: Develop documents. Develop documents at required process points according to established standards and policy. [Outcome: 5]</p> <p>SUP.7.BP6: Check documents. Review documents before distribution, and authorize documents before distribution or release. [Outcome: 5]</p> <p>NOTE 2: Documents should be checked through Verification process (SUP.2) and Validation process (SUP.3) with stakeholders.</p> <p>SUP.7.BP7: Distribute documents. In order to make document available, distribute documents according to determined modes of distribution via appropriate media to specified audiences, confirming delivery of documents, where necessary. [Outcome: 5]</p> <p>SUP.7.BP8: Maintain documents. Maintain documents in accordance with the determined documentation strategy. [Outcome: 6]</p> <p>NOTE 3: If the document is part of a product baseline or if its control and stability are important, it should be modified and distributed in accordance with Configuration management process (SUP.8). If the document is part of a product baseline under maintenance, its maintenance is covered by Software and system maintenance process (ENG.12).</p>

5.5.8 SUP.8 Configuration management

Process ID	SUP.8
Process Name	Configuration management
Process Purpose	The purpose of the Configuration management process is to establish and maintain the integrity of the work products/items of a process or project and make them available to concerned parties.
Process Outcomes	<p>As a result of successful implementation of the Configuration management process:</p> <ol style="list-style-type: none"> 1) a configuration management strategy is developed; 2) work products/items generated by the process or project are identified, defined and baselined; 3) modifications and releases of the work products/items are controlled; 4) modifications and releases are made available to affected parties; 5) the status of the work products/items and modifications are recorded and reported; 6) the completeness and consistency of the work products/items is ensured; and

	7) storage, handling and delivery of the work products/items are controlled.
Base Practices	<p>SUP.8.BP1: Develop configuration management strategy. Determine configuration management strategy, including configuration management activities and schedule for performing these activities. [Outcome: 1]</p> <p>SUP.8.BP2: Identify configuration items. Identify configuration items that need to be independently identified, stored, tested, reviewed, used, changed, delivered and/or maintained. [Outcome: 2]</p> <p>NOTE 1: In order to provide an efficient means of accessing and storing the entities required, a file and directory structure and hierarchies may be established.</p> <p>SUP.8.BP3: Establish branch management strategy. Develop a branch management strategy for parallel development efforts that use the same source base. [Outcome: 1]</p> <p>NOTE 2: A branch management strategy will include branch management, merging strategies, file versioning in a branching system, branch parenting strategies and tagging strategies.</p> <p>NOTE 3: A branching strategy will define why and when branches will be created, what activities will occur in the branches, and how the branches will complete and/or migrate into the main source base.</p> <p>SUP.8.BP4: Establish baselines. Establish the internal and delivery baselines. High-level baselines are achieved by the accumulation of all the requisite configured items at their respective low-level baseline formal issues. [Outcome: 3]</p> <p>NOTE 4: Baselines cover all related work products, including requirements, design documentation, user documentation and test specifications where appropriate. Examples of work products which should be baselined include requirements, designs, plans, and products.</p> <p>SUP.8.BP5: Maintain configuration item description. Maintain an up-to-date description of each configuration item. [Outcome: 2,3,4]</p> <p>SUP.8.BP6: Control modifications and releases. Establish a mechanism for logging the items, submitting and releasing them. [Outcome: 4]</p> <p>NOTE 5: Controls for source code control may include check in / out, file access permissions, version identification and incrementation, change commenting and files locking / commit.</p> <p>SUP.8.BP7: Maintain configuration item history. Maintain a history of each configuration item in sufficient detail to recover a previously baselined version when required. [Outcome: 3,4]</p> <p>SUP.8.BP8: Report configuration status. Report status of each configuration item and their relationship in the current system integration. [Outcome: 5]</p> <p>SUP.8.BP9: Verify the information about configured items. Verify that the information about configured items and their structures, supplied through status accounting reporting is complete and ensure the consistency of the items. [Outcome: 6]</p> <p>SUP.8.BP10: Manage the backup, storage, archiving, handling and delivery of configured items. Ensure the integrity and consistency of configured items through appropriate scheduling and resourcing of backup, storage and archiving. Control the handling and delivery of configured items. [Outcome: 4,6 and 7]</p> <p>NOTE 6: Backups are maintained under the Infrastructure process (RIN.4).</p>

5.5.9 SUP.9 Problem resolution management

Process ID	SUP.9
Process Name	Problem resolution management
Process Purpose	The purpose of the Problem resolution management process is to ensure that all discovered problems are identified, analyzed, managed and controlled to resolution.
Process Outcomes	<p>As a result of successful implementation of the Problem resolution management process:</p> <ol style="list-style-type: none"> 1) a problem management strategy is developed; 2) problems are recorded, identified and classified; 3) problems are analyzed and assessed to identify acceptable solution(s); 4) problem resolution is implemented; 5) problems are tracked to closure; and 6) the status of all problem reports is known <p>NOTE: Problem resolution management may initiate a change request.</p>
Base Practices	<p>SUP.9.BP1: Develop problem resolution strategy. Determine the problem resolution strategy for ensuring that problems are described, recorded, analyzed, and corrected. [Outcome: 1]</p> <p>SUP.9.BP2: Identify and record the problem. Each problem is uniquely identified, and recorded. [Outcome: 2]</p> <p>SUP.9.BP3: Provide initial support and classification. Provide initial support and feedback on reported problems and classify problems according to the severity. [Outcome: 2]</p> <p>NOTE 1: Classification of problems may be in terms of criticality, urgency, relevance etc.</p>

	<p>SUP.9.BP4: Investigate and diagnose the cause of the problem. Analyze problems in order to identify the cause of the problem. [Outcome: 3]</p> <p>NOTE 2: A problem may be a known error or may impact application installed on multiple platforms.</p> <p>SUP.9.BP5: Assess the impact of the problem to determine solution. Assess the impact of the problem to determine appropriate actions, and to determine and agree on a solution. [Outcome: 3]</p> <p>SUP.9.BP6: Execute urgent resolution action, where necessary. If the problem warrants immediate resolution pending an actual change, it obtains authorization for immediate fix. [Outcome: 4]</p> <p>SUP.9.BP7: Raise alert notifications, where necessary. If the problem is of high severity and impacts other systems or users, an alert notification may need to be raised, pending a fix or change. [Outcome: 4, 6]</p> <p>SUP.9.BP8: Implement problem resolution. Implement problem resolution actions to resolve the problem and review the implementation. [Outcome: 4]</p> <p>SUP.9.BP9: Initiate change request. Initiate change request for diagnosed errors. [Outcome: 5]</p> <p>SUP.9.BP10: Track problem status. Track to closure the status of identified problems. [Outcome: 5, 6]</p>

5.5.10 SUP.10 Change request management

Process ID	SUP.10
Process Name	Change request management
Process Purpose	The purpose of the Change request management process is to ensure that change requests are managed, tracked and controlled.
Process Outcomes	As a result of successful implementation of the Change request management process: <ol style="list-style-type: none"> 1) a change management strategy is developed; 2) requests for changes are recorded and identified;

	<p>3) dependencies and relationships to other change requests are identified;</p> <p>4) criteria for confirming implementation of change requests are defined;</p> <p>5) requests for change are prioritized, and resource requirements estimated;</p> <p>6) changes are approved on the basis of priority and availability of resources;</p> <p>7) approved changes are implemented and tracked to closure; and</p> <p>8) the status of all change requests is known.</p>
Base Practices	<p>SUP.10.BP1: Develop a change management strategy. A change management strategy is established and implemented to ensure changes can be described, recorded, analyzed, and actioned. [Outcome: 1]</p> <p>SUP.10.BP2: Record the request for change. Each change request is uniquely identified, and recorded. [Outcome: 2]</p> <p>SUP.10.BP3: Record the status of change requests. Change requests and changes are allocated a status indication to facilitate tracking. [Outcome: 8]</p> <p>NOTE 1: Provide traceability to the reason for the change. Change requests submitted as a resolution to a problem or error report should retain a link to the originating problem or error report. [Outcome: 3]</p> <p>SUP.10.BP4: Establish the dependencies and relationships to other change requests. Identify the relationship of a change request to other change requests to establish dependencies (e.g. towards another change to the same software element or for a set of changes related to a planned release). [Outcome: 3]</p> <p>SUP.10.BP5: Assess the impact of the change. Assess the impact, resources, risks, and potential benefits of the change request and establish criteria for confirming implementation. [Outcome: 4,5]</p> <p>NOTE 2: A Change Request Board (CRB) is a common mechanism used to assess change requests. When conducting impact and resource assessment, the effect on the infrastructure and users must be considered together with the resources required for implementing the change, including likely costs, the number and availability of people and the elapsed time to implement.</p> <p>SUP.10.BP6: Identify the verification and validation activities to be performed for implemented changes. Before implementing a change the scope of verification and validation activities to be undertaken are identified. [Outcome: 7]</p> <p>SUP.10.BP7: Approve changes. All changes are approved before implementation. [Outcome: 6]</p> <p>SUP.10.BP8: Implement the change. Approved changes are implemented. [Outcome: 7, 5]</p> <p>NOTE 3: Scheduled changes may be incorporated into target releases. A packaged release may incorporate corrective and adaptive changes.</p> <p>SUP.10.BP9: Review the implemented change. All changes are reviewed after implementation and before closure to ensure that they had the desired effect and met their objectives. [Outcome: 7,8]</p>

5.6 Management Process Group (MAN)

5.6.1 MAN.1 Organizational alignment

Process ID	MAN.1
Process Name	Organizational alignment
Process Purpose	The purpose of the Organizational alignment process is to enable the software processes needed by the organization to provided software products and services, to be consistent with its business goals.
Process Outcomes	<p>As a result of the successful implementation of Organizational alignment process:</p> <ol style="list-style-type: none"> 1) the Organization's business goals are identified 2) the process framework is identified and defined that include a set of software processes needed to achieve the business goals of the organization 3) a strategy is defined for process definition, implementation and improvement; support is provided to enable this strategy 4) the organization's mission, core values, vision, goals and objectives is made known to all employees; 5) individuals in the organization share a common vision, culture, and understanding of the business goals to empower them to function effectively 6) each individual in the organization understands their role in achieving the goals of the business and is able to perform that role.
Base Practices	<p>MAN.1.BP1: Develop a strategic vision. Develop a strategic vision for the organization identifying its business goals and the relationship of system and software engineering functions to the core activities of the organization. [Outcome: 1]</p> <p>MAN.1.BP2: Define the process framework. Identify the processes that need to be performed in order to achieve the business goals. [Outcome: 2]</p> <p>MAN.1.BP3: Define a strategy for process deployment. Define a strategy for process deployment, implementation, and improvement in the organizational unit. [Outcome: 3]</p> <p>MAN.1.BP4: Provide management commitment. Provide management support for process deployment, implementation, and improvement to enable achievement of business goals. [Outcome: 3]</p> <p>NOTE: One way to perform this practice would be to implement a Quality Management System</p>

	<p>in accordance with ISO 9001.</p> <p>MAN.1.BP5: Communicate the vision and goals. Explain the organization strategic vision and goals to all individuals working for the organization, using appropriate management and communication mechanisms. [Outcome: 4, 5]</p> <p>MAN.1.BP6: Ensure sharing of common vision. Ensure that each individual in the organization understands the common vision and is committed and empowered to perform their function effectively. [Outcome: 5]</p> <p>MAN.1.BP7: Enable active participation. Enable each individual to contribute to the achievement of business goals and related process improvement initiatives. [Outcome: 5, 6]</p>

5.6.2 MAN.2 Organization management

Process ID	MAN.2
Process Name	Organization management

Process Purpose	<p>The purpose of the Organization management process is to establish and perform software management practices, during the performance of the processes, needed for providing software products and services that are consistent with the business goals of the organization.</p> <p>NOTE: Although organizational operations in general have a much broader scope than that of software process, software processes are implemented in a business context and to be effective, require an appropriate organizational environment.</p>
Process Outcomes	<p>As a result of the successful implementation of Organization management process:</p> <ol style="list-style-type: none"> 1) the organization will invest in the appropriate management infrastructure; 2) the best practices are identified to support the implementation of effective organization and project management; and 3) provide a basis for evaluating the achievement of organization business goals based on these management practices.
Base Practices	<p>MAN.2.BP1: Identify management infrastructure. Identify management infrastructure appropriate to perform software management practices that are consistent with the business goals of the organization. [Outcome: 1]</p> <p>NOTE 1: Management infrastructure may include organizational roles and responsibilities, decision-making system, communication mechanisms and planning / monitoring of business operations.</p> <p>MAN.2.BP2: Provide management infrastructure: Provide the identified management infrastructure appropriate in organization's broader scope. [Outcome: 1]</p> <p>MAN.2.BP3: Identify and implement software management practices. Identify and implement effective software management practices to implement and improve competitive software processes and to construct effective organizations and effective enterprise project management. [Outcome: 2]</p> <p>MAN.2.BP4: Perform identified management practices. Perform management practices using management infrastructure. [Outcome: 2]</p> <p>MAN.2.BP5: Evaluate effectiveness. Evaluate the effectiveness of implemented software management practices to achieve the related organization business goals. [Outcome: 3]</p> <p>MAN.2.BP6: Provide support to adopt best practices. Use incentive approaches and software management infrastructure to support implementation of effective software management practices. [Outcome: 2, purpose]</p> <p>NOTE 2: Best practice may be related to the achieved or next capability level. See Knowledge management process (RIN.3) to manage and disseminate best practices as part of organizational knowledge assets.</p>

5.6.3 MAN.3 Project management

Process ID	MAN.3
Process Name	Project management
Process Purpose	The purpose of the Project management process is to identify, establish, co-ordinate, and monitor the activities, tasks, and resources necessary for a project to produce a product and/or service, in the context of the project's requirements and constraints.
Process Outcomes	<p>As a result of successful implementation of Project management process:</p> <ol style="list-style-type: none"> 1) the scope of the work for the project is defined; 2) the feasibility of achieving the goals of the project with available resources and constraints are evaluated; 3) the tasks and resources necessary to complete the work are sized and estimated; 4) interfaces between elements in the project, and with other project and organizational units, are identified and monitored; 5) plans for the execution of the project are developed and implemented; 6) progress of the project is monitored and reported; and 7) actions to correct deviations from the plan and to prevent recurrence of problems identified in the project are taken when project targets are not achieved.
Base Practices	<p>MAN.3.BP1: Define the scope of work. Identify the project's objectives, motivation and boundaries and define the work to be undertaken by the project. [Outcome: 1]</p> <p>MAN.3.BP2: Define project life cycle. Define a life cycle and strategy for the project, appropriate to its scope, context, magnitude and complexity. [Outcome: 1]</p> <p>MAN.3.BP3 Evaluate feasibility of the project. Evaluate the feasibility of achieving the goals of the project with available resources and constraints. [Outcome: 2]</p> <p>MAN.3.BP4: Determine and maintain estimates for project attributes. Define and maintain baselines for project attributes. [Outcome: 2,3]</p> <p>NOTE 1: Project attributes may include 1) business and quality goals for the project, 2) size and complexity of the project and 3) project effort, schedule and budget.</p> <p>NOTE 2: Project quality goals and risks should be considered when estimating project attributes. See Quality management process (MAN.4) and Risk management process (MAN.5) for details.</p>

	<p>MAN.3.BP5: Define project activities and tasks. Identify project activities and tasks according to defined project lifecycle, and define dependencies between them. [Outcome: 3]</p> <p>MAN.3.BP6: Define needs for experience, knowledge and skills. Identify the experience, knowledge and skill requirements of the project and apply them to the selection of individuals and teams. [Outcome: 3]</p> <p>MAN.3.BP7: Define project schedule. Allocate resources to activities and determine the sequence and schedule of performance of activities within project. [Outcome: 5]</p> <p>MAN.3.BP8: Identify and monitor project interfaces. Identify and agree interfaces of the project with other projects, organizational units and other affected parties and monitor agreed commitments. [Outcome: 4]</p> <p>MAN.3.BP9: Allocate responsibilities. Identify the specific individuals and groups contributing to, and impacted by, the project, allocate them their specific responsibilities, and ensure that the commitments are understood and accepted, funded and achievable. [Outcome: 5]</p> <p>MAN.3.BP10: Establish project plan. Define and maintain project master plan and other relevant plans to cover the project scope and goals, resources, infrastructure, interfaces and communication mechanisms. [Outcome: 5]</p> <p>MAN.3.BP11: Implement the project plan. Implement planned activities of the project, record status of progress and report the current status to affected parties. [Outcome: 5, 6]</p> <p>MAN.3.BP12: Monitor project attributes. Monitor project scope, budget, cost, resources and other necessary attributes and document significant deviations of them against the project baseline. [Outcome: 6]</p> <p>MAN.3.BP13: Review progress of the project. Regularly report and review the status of the project performance against the project plan. [Outcome: 6]</p> <p>MAN.3.BP14: Act to correct deviations. Take action when project goals are not achieved, to correct deviations from the plan and to prevent recurrence of problems identified in the project. Update project plans accordingly. [Outcome: 7]</p>

5.6.4 MAN.4 Quality management

Process ID	MAN.4
Process Name	Quality management
Process Purpose	The purpose of the Quality management process is to achieve customer satisfaction by monitoring the quality of the products and services, at the organizational and project level, to ensure they meet customer requirements.
Process Outcomes	<p>As a result of successful implementation of the Quality management process:</p> <ol style="list-style-type: none"> 1) quality goals based on the customer's stated and implicit quality requirements are established; 2) an overall strategy is developed to achieve the defined goals; 3) a quality management system is established to implement the strategy; 4) identified quality control and assurance activities are performed and their performance confirmed; 5) actual performance against the quality goals is monitored; and 6) appropriate action is taken when quality goals are not achieved.
Base Practices	<p>MAN.4.BP1: Establish quality goals. Based on the customer's stated requirements for quality and implicit quality requirements relevant to the customer's environment, establish organisational quality goals and quality goals for the product and process that can be evaluated throughout the project, preferably in a quantitative manner. [Outcome: 1]</p> <p>NOTE 1: Customer environment may include all affected parties, society at large, relevant legislation and regulations.</p> <p>NOTE 2: Quality goals depend on the type of business.</p>

	<p>MAN.4.BP2: Define overall strategy. Develop an overall strategy including necessary resources and responsibilities to achieve the defined goals. [Outcome: 2]</p> <p>NOTE 3: Continuous improvement in quality is one means to achieve the defined goals.</p> <p>MAN.4.BP3: Define quality criteria. Define standards, references and metrics that will measure and verify achievement of quality goals and acceptance criteria that will help to assess whether the relevant quality goals have been achieved. [Outcome: 2]</p> <p>MAN.4.BP4: Establish a quality management system. Establish and maintain a quality management system to plan, implement, monitor and control necessary corrective and preventive actions. [Outcome: 3]</p> <p>MAN.4.BP5: Assess achievement of quality goals. Review regularly the achievement of quality goals at higher management level using defined criteria and take appropriate action. [Outcome: 4, 5]</p> <p>MAN.4.BP6: Take preventive or corrective action. When defined quality goals are not achieved, take corrective or preventive action both at the project and organizational level. [Outcome: 4, 6]</p> <p>NOTE 3: The corrective action can involve fixing the product generated by a particular project activity or changing the planned set of activities in order to better achieve the quality goals or both. The preventive action can involve modifying product specifications or process definitions, or both, to prevent recurrence of the non-achievement.</p> <p>MAN.4.BP7: Collect feedback. Collect feedback from customer, project, process and personnel to verify continuous improvement of quality situation at organizational and project level. [Outcome: 6]</p> <p>MAN.4.BP8: Monitor actual performance of quality. Measure and monitor actual performance of quality against the quality goals. [Outcome: 5]</p>

5.6.5 MAN.5 Risk management

Process ID	MAN.5
Process Name	Risk management
Process Purpose	The purpose of the Risk management process is to identify, analyse, treat and monitor the risks continuously.
Process Outcomes	<p>As a result of successful implementation of Risk management process:</p> <ol style="list-style-type: none"> 1) the scope of the risk management to be performed is determined; 2) appropriate risk management strategies are defined and implemented; 3) risks are identified as they develop during the conduct of the project; 4) the risks are analyzed and the priority in which to apply resources to treatment of these risks is determined; 5) risk measures are defined, applied, and assessed to determine changes in the status of risk and the progress of the treatment activities; and 6) appropriate treatment is taken to correct or avoid the impact of risk based on its priority, probability, and consequence or other defined risk threshold.
Base Practices	<p>MAN.5.BP1: Establish risk management scope. Determine the scope of risk management to be performed. [Outcome: 1]</p> <p>MAN.5.BP2: Define risk management strategies. Define appropriate strategies and risk measures to identify, analyze, treat and monitor each risk or set of risks, both at the project and organizational level. [Outcome: 2, 5]</p> <p>MAN.5.BP3: Identify risks. Identify risks to the project both initially within the project strategy and as they develop during the conduct of the project. [Outcome: 3]</p>

	<p>NOTE 1: Examples of risks include cost, schedule, effort, resource, and technical risks.</p> <p>MAN.5.BP4: Analyze risks. Analyze risks and apply risk measures to determine priority in which to apply resources to monitor risks. [Outcome: 4, 5]</p> <p>NOTE 2: Issues to be considered in risk analysis include the likelihood and consequence of each identified risk.</p> <p>MAN.5.BP5: Define and perform risk treatment actions. For each risk (or set of risks) define and perform the appropriate actions to reduce the risks to an acceptable level. [Outcome: 5, 6]</p> <p>MAN.5.BP6: Monitor risks. Monitor the current state of each risk, determine changes in the status of risk and assess the effectiveness of risk treatment actions. [Outcome: 5,6]</p> <p>MAN.5.BP7: Take preventive or corrective action. When expected progress in risk mitigation is not achieved, take appropriate preventive action to further reduce or avoid the impact of each risk. Where risk mitigation cannot reduce or avoid the risk, plan corrective action to resolve the problem arising from the risk. [Outcome: 6]</p> <p>NOTE 3: Preventive action may involve developing and implementing new treatment strategies or adjusting the existing strategies.</p>

5.6.6 MAN.6 Measurement

Process ID	MAN.6
Process Name	Measurement
Process Purpose	The purpose of the Measurement process is to collect and analyze data relating to the products developed and processes implemented within the organization and its projects, to support effective management of the processes and to objectively demonstrate the quality of the products.
Process Outcomes	As a result of successful implementation of Measurement process:

	<p>1) organizational commitment is established and sustained to implement the measurement process;</p> <p>2) the measurement information needs of organizational and management processes are identified;</p> <p>3) an appropriate set of measures, driven by the information needs are identified and/or developed;</p> <p>4) measurement activities are identified and performed;</p> <p>5) the required data is collected, stored, analyzed, and the results interpreted;</p> <p>6) information products are used to support decisions and provide an objective basis for communication; and</p> <p>7) the measurement process and measures are evaluated and communicated to the process owner.</p>
Base Practices	<p>MAN.6.BP1: Establish organizational commitment for measurement. A commitment of management and staff to measurement is established, sustained and communicated to the organizational unit. [Outcome: 1]</p> <p>MAN.6.BP2: Develop a measurement strategy. Define an appropriate measurement strategy to identify, perform and evaluate measurement activities and results, based on organizational and project needs. [Outcome: 1]</p> <p>MAN.6.BP3: Identify measurement information needs. Identify the measurement information needs of organizational and management processes. [Outcome: 2]</p> <p>MAN.6.BP4: Specify measures. Identify and develop an appropriate set of measures based on measurement information needs. [Outcome: 3]</p> <p>MAN.6.BP5: Collect and store measurement data. Identify, collect and store measurement data, including context information necessary to verify, understand, or evaluate the data. [Outcomes 4, 5]</p> <p>MAN.6.BP6: Analyze measurement data. Analyze and interpret measurement data, and develop information products. [Outcome: 5]</p> <p>MAN.6.BP7: Use information products for decision-making. Make accurate and current measurement information products accessible for any decision-making processes for which it is relevant. [Outcome: 6]</p> <p>MAN.6.BP8: Communicate measurement results. Disseminate measurement information products to all parties who will be using them and collect feedback to evaluate the appropriateness for intended use. [Outcome: 6, 7]</p> <p>MAN.6.BP9: Evaluate and communicate information products and measurement activities to process owners. Evaluate information products and measurement activities against the identified information needs and measurement strategy, identify potential improvements in measurements, and communicate any identified potential improvement to the process owners. [Outcome: 7]</p>

5.7 Process Improvement Process Group (PIM)

5.7.1 PIM.1 Process establishment

Process ID	PIM.1
Process Name	Process establishment
Process Purpose	The purpose of the Process establishment process is to establish a suite of organizational processes for all life cycle processes as they apply to its business activities.
Process Outcomes	As a result of successful implementation of Process establishment process: 1) a defined and maintained standard set of processes are established, along with an indication of each process's applicability; 2) the detailed tasks, activities and associated work products of the standard process are identified, together with expected performance characteristics;

	<p>3) a strategy for tailoring the standard process for the product or service is developed in accordance with the needs of the project; and</p> <p>4) information and data related to the use of the standard process for specific projects exist and are maintained.</p>
Base Practices	<p>PIM.1.BP1: Define process architecture. Define a standard set of processes, purpose of each process and interactions between them. [Outcome: 1]</p> <p>PIM.1.BP2: Support deployment of processes. Support the organization-wide use of standard processes according to the purpose of each process. [Outcome: 1]</p> <p>PIM.1.BP3: Define standard processes. Define and maintain a description of each standard process according to the needs to establish processes in the organization. [Outcome: 2]</p> <p>NOTE: Effective, organization-wide establishment of standard processes may require that they are documented.</p> <p>PIM.1.BP4: Identify performance expectations. Identify expectations for process performance when using the organization's standard processes. [Outcome: 2]</p> <p>PIM.1.BP5: Establish process tailoring guidelines: Establish organizational guidelines for tailoring the organization's standard processes to meet the specific needs of projects. [Outcome: 3]</p> <p>PIM.1.BP6: Maintain process data. Capture and maintain information and data related to the use of standard processes. [Outcome: 4]</p>

5.7.2 PIM.2 Process assessment

Process ID	PIM.2
-------------------	-------

Process Name	Process assessment
Process Purpose	The purpose of the Process assessment process is to determine the extent to which the organization's standard processes contribute to the achievement of its business goals and to help the organization focus on the need for continuous process improvement.
Process Outcomes	As a result of successful implementation of Process assessment process: 1) information and data related to the use of the standard process for specific projects will exist and be maintained; 2) the relative strengths and weaknesses of the organization's standard processes are understood; and 3) accurate and accessible assessment records are kept and maintained.
Base Practices	<p>PIM.2.BP1: Define assessment goals. Define and validate the assessment goals based on the organization's business goals. Identify the criteria to verify the achievement of the goals. [Outcome: 1]</p> <p>PIM.2.BP2: Plan the assessment. Develop and document a plan for the assessment. [Outcome: 1]</p> <p>NOTE: Part 3 of this International standard provides guidance about performing an assessment</p> <p>PIM.2.BP3: Obtain commitment. Obtain the commitment of the sponsor and the organisational unit(s) to be assessed to the planned assessment(s), including an agreed schedule and resources. [Outcome: 1]</p> <p>PIM.2.BP4: Perform the assessment to collect data. Perform the assessment to collect the data required for evaluating the processes within the scope of the assessment. [Outcome: 1]</p> <p>PIM.2.BP5: Validate the assessment data. Validate the assessment data collected as appropriate, ensuring that the data sufficiently covers the assessment goal. [Outcome: 3]</p> <p>PIM.2.BP6: Analyze the assessment data. Analyze the validated assessment data to understand the relative strengths and weaknesses of the organization's processes. [Outcome: 2]</p> <p>PIM.2.BP7: Report the assessment results. Report the planned assessment outputs to the assessment sponsor. [Outcome: 1, 3] [</p> <p>PIM.2.BP8: Maintain assessment record. Maintain accurate and current assessment results in an accessible location and format. [Outcome: 1, 3]</p>

5.7.3 PIM.3 Process improvement

Process ID	PIM.3
Process Name	Process Improvement
Process Purpose	The purpose of the Process improvement process is to continually improve the organization's effectiveness and efficiency through the processes used and maintained aligned with the business need.
Process Outcomes	<p>As a result of successful implementation of Process improvement process:</p> <ol style="list-style-type: none"> 1) Commitment is established to provide resources to sustain improvement actions; 2) issues arising from the organization's internal / external environment are identified as improvement opportunities and justified as reasons for change; 3) analysis of the current status of the existing process is performed, focusing on those processes from which improvement stimuli arise; 4) improvement goals are identified and prioritized, and consequent changes to the process are defined and implemented; 5) the effects of process implementation are monitored and confirmed against the defined improvement goals; 6) knowledge gained from the improvements is communicated within the organization; and 7) the improvements made are evaluated and consideration given for using the solution elsewhere within the organization. <p>NOTE 1: Information sources providing input for change may include: process assessment results, audits, customer's satisfaction reports, organizational effectiveness / efficiency, cost of quality and risk analysis.</p> <p>NOTE 2: The analysis may include process assessment.</p>
Base Practices	<p>PIM.3.BP1: Establish commitment. Commitment is established to provide resources to sustain improvement actions. [Outcome: 1]</p> <p>PIM.3.BP2: Identify issues. Issues arising from the organization's internal / external environment are identified as improvement opportunities and with justified reasons for change. [Outcome: 2]</p> <p>PIM.3.BP3: Establish process improvement objectives. Analysis of the current status of the existing processes is performed; focusing on those processes from which improvement stimuli arise and/or process based risk is reduced, resulting in improvement objectives for the process being established. [Outcome: 3]</p>

	<p>PIM.3.BP4: Prioritize improvements. The improvement objectives are prioritized. [Outcome: 4]</p> <p>PIM.3.BP5: Plan process changes. Consequent changes to the process are defined and planned. [Outcome: 4]</p> <p>PIM.3.BP6: Implement process changes. The improvements to the process are implemented. [Outcome: 4]</p> <p>PIM.3.BP7: Confirm process improvement. The effects of process implementation are monitored, measured and confirmed against the defined improvement goals. [Outcome: 5]</p> <p>PIM.3.BP8: Communicate results of improvement. Knowledge gained from the improvements is communicated outside of the improvement project across relevant parts of the organization. [Outcome: 6]</p> <p>PIM.3.BP9: Evaluate the results of the improvement project. Evaluate the results of the improvement project to see if the solution can be used elsewhere in the organization. [Outcome: 7]</p>

5.8 Resource and Infrastructure Process Group (RIN)

5.8.1 RIN.1 Human resource management

Process ID	RIN.1
Process Name	Human resource management

Process Purpose	The purpose of the Human resource management process is to provide the organization and projects with individuals who possess skills and knowledge to perform their roles effectively and to work together as a cohesive group.
Process Outcomes	As a result of successful implementation of the Human resource management process: 1) individuals with the required skills and competencies are identified and recruited; 2) effective interaction between individuals and groups are supported; 3) the work force have the skills to share information and co-ordinate their activities efficiently; and 4) objective criteria are defined against which group and individual performance is monitored to provide performance feedback and to enhance performance.
Base Practices	<p>RIN.1.BP1: Identify needed skills and competencies. Identify and evaluate skills and competencies needed by the organization to achieve its goals. [Outcome: 1]</p> <p>RIN.1.BP2: Define evaluation criteria. Define objective criteria that can be used to evaluate candidates and assess staff performance. [Outcome: 1,4]</p> <p>RIN.1.BP3: Recruit qualified staff. Establish a systematic program for recruitment of staff competent to meet the needs of the organization. [Outcome: 1]</p> <p>RIN.1.BP4: Develop staff skills and competencies. Define and provide opportunities for development of the skills and competencies of staff. [Outcome: 1, 3]</p> <p>RIN.1.BP5: Define project team organization. Define the structure and operating rules under which project teams operate. [Outcome: 2]</p> <p>RIN.1.BP6: Empower project teams. Empower teams to perform their job, by ensuring that they have:</p> <ul style="list-style-type: none"> - an understanding of their job; - a shared vision or sense of common interest; - appropriate mechanisms or facilities for communication; and - support from management for what they are trying to accomplish. [Outcome: 2] <p>RIN.1.BP7: Maintain project team interactions. Obtain and maintain agreement on the management of interactions between teams. [Outcome: 2]</p> <p>RIN.1.BP8: Evaluate staff performance. Evaluate the performance of staff, either in respect of their contributions to the goals of the organization as a whole. Ensure that feedback is discussed with the staff. [Outcome: 1,4]</p> <p>RIN.1.BP9: Provide feedback on performance. Ensure that feedback is provided to staff on the results of any performance evaluations performed. [Outcome: 4]</p> <p>RIN.1.BP10: Maintain staff records. Maintain adequate records of staff, including not only personnel details, but also information on skills, training completed, and performance evaluations. [Outcome: 4]</p>

	15-17 Personnel performance evaluation [Outcome: 4]
	18-05 Personnel performance criteria [Outcome: 4]

5.8.2 RIN.2 Training

Process ID	RIN.2
Process Name	Training
Process Purpose	The purpose of the Training process is to provide the organization and project with individuals who possess the needed skills and knowledge to perform their roles effectively.
Process Outcomes	As a result of successful implementation of Training process: 1) training is developed or acquired to address the organization and project training needs; and 2) training is conducted to ensure that all individuals have the skills required to perform their assignments, using mechanisms such as training strategies and materials.
Base Practices	<p>RIN.2.BP1: Develop a strategy for training. Develop a strategy for training including how the training needs will be identified, how the needed training will be developed or acquired, and how the training will be performed. [Outcome: 1]</p> <p>RIN.2.BP2: Identify needs for training. Identify and evaluate skills and competencies to be provided or improved through training. [Outcome: 1]</p> <p>RIN.2.BP3: Develop or acquire training. Develop or acquire training that addresses the common training needs. [Outcome: 1]</p> <p>RIN.2.BP4: Prepare for training execution. Identify and prepare the execution of training sessions, including the availability of the training materials and the availability of personnel to be trained. [Outcome: 1]</p> <p>RIN.2.BP5: Train personnel. Train personnel to have the knowledge and skills needed to perform their roles. [Outcome: 2]</p> <p>RIN.2.BP6: Maintain staff training records. Maintain adequate records of the training completed by the staff. [Outcome: 2]</p>

	RIN.2.BP7: Evaluate training effectiveness. Identify and evaluate added value provided by each training session, including the evaluation of training material. [Outcome: 2]

5.8.3 RIN.3 Knowledge management

Process ID	RIN.3
Process Name	Knowledge management
Process Purpose	The purpose of the Knowledge management process is to ensure that individual knowledge, information and skills are collected, shared, reused and improved throughout the organization.
Process Outcomes	As a result of successful implementation of Knowledge management process: 1) infrastructure is established and maintained for sharing common and domain information across the organization; 2) knowledge is readily available and shared throughout the organization; and 3) the organization will select an appropriate knowledge management strategy.
Base Practices	<p>RIN.3.BP1: Establish a knowledge management system. Establish and maintain a knowledge management infrastructure and mechanism to support the activities to identify, classify, exchange and use knowledge assets. [Outcome: 1, 2]</p> <p>RIN.3.BP2: Create the network of knowledge contributors. Establish the network of experts and their mutual interaction. [Outcome: 2, 3]</p> <p>RIN.3.BP3: Develop a knowledge management strategy. Define an appropriate knowledge management strategy based on organizational, individual, domain and project needs. [Outcome: 4]</p> <p>RIN.3.BP4: Capture knowledge. Identify and record each knowledge item according to the classification schema and asset criteria. [Outcome: 2, 3]</p> <p>RIN.3.BP5: Disseminate knowledge assets. Share knowledge assets with experts, users and projects. [Outcome: 3]</p>

	RIN.3.BP6: Improve knowledge assets. Validate and enrich knowledge assets to ensure their appropriateness and value to the organization. [Outcome: 2, 3]

5.8.4 RIN.4 Infrastructure

Process ID	RIN.4
Process Name	Infrastructure
Process Purpose	The purpose of the Infrastructure process is to maintain a stable and reliable infrastructure that is needed to support the performance of any other process.
Process Outcomes	<p>As a result of successful implementation of the Infrastructure process:</p> <ol style="list-style-type: none"> 1) the requirements for infrastructure to support processes in the organizational unit are defined; 2) the infrastructure elements are identified and specified; 3) infrastructure elements are acquired; 4) the elements of the infrastructure are implement; and 5) a stable and reliable infrastructure is maintained. <p>NOTE: The infrastructure may include hardware, software, methods, tools, techniques, standards, and facilities for development, operation, or maintenance.</p>
Base Practices	<p>RIN.4.BP1: Identify infrastructure process scope. Identify the procedures, standards, tools, and techniques that the infrastructure process should support. [Outcome: 1]</p> <p>NOTE 1: The infrastructure may include hardware, software, methods, tools, techniques, standards, and facilities for development, operation, or maintenance.</p> <p>RIN.4.BP2: Define the infrastructure process requirements. Define the infrastructure process requirements to support the performance of appropriate processes. [Outcome: 1, 2]</p> <p>NOTE 2: Infrastructure process requirements may include:</p> <ul style="list-style-type: none"> – security; – throughput and data sharing requirements; – backup and recovery; – remote access facility;

	<ul style="list-style-type: none"> – physical workspace and equipment; – user support requirements; and – maintenance requirements. <p>RIN.4.BP3: Acquire infrastructure process. Acquire an infrastructure process, which satisfies the requirements. [Outcome: 3]</p> <p>RIN.4.BP4: Establish the infrastructure process. Assemble and integrate the elements of the infrastructure process, providing an effective environment that supports implementation of the organization's processes. [Outcome: 4]</p> <p>RIN.4.BP5: Provide support for the infrastructure process. Provide support for those who utilize the infrastructure process. [Outcome: 4]</p> <p>RIN.4.BP6: Maintain the infrastructure process. Perform maintenance on the infrastructure process for the purposes of:</p> <ul style="list-style-type: none"> – correcting defects; and – improving performance. [Outcome: 5]

5.9 Reuse Process Group (REU)

5.9.1 REU.1 Asset management

Process ID	REU.1
Process Name	Asset management
Process Purpose	The purpose of the Asset management process is to manage the life of reusable assets from

	conception to retirement.
Process Outcomes	<p>As a result of successful implementation of the Asset management process:</p> <ol style="list-style-type: none"> 1) an asset management strategy is documented; 2) an asset classification scheme is established; 3) a criteria for asset acceptance, certification and retirement are defined; 4) an asset storage and retrieval mechanism is operated; 5) the use of assets are recorded; 6) changes to the assets are controlled, and 7) users of assets are notified of problems detected, modifications made, new versions created and deletion of assets from the storage and retrieval mechanism.
Base Practices	<p>REU.1.BP1: Define and document an asset management strategy. Define and document an asset management strategy for reuse. [Outcome: 1]</p> <p>REU.1.BP2: Establish a classification scheme for assets. Provide a classification scheme for assets to support their reuse. [Outcome: 2]</p> <p>REU.1.BP3: Define criteria for assets. Define acceptance, certification and retirement criteria for assets. [Outcome: 3]</p> <p>REU.1.BP4: Establish the asset storage and retrieval mechanisms. Establish the asset storage and retrieval mechanisms, and make them available to users for storing and retrieving and for providing information on reusable assets. [Outcome: 4]</p> <p>REU.1.BP5: Identify reusable assets. Identify assets to be made available for reuse. [Outcome: 2]</p> <p>REU.1.BP6: Accept reusable assets. Certify, classify, record and baseline assets that are submitted for storage and make them available for reuse. [Outcome: 3, 4]</p> <p>REU.1.BP7: Operate asset storage. Provide and control operation of asset storage, retrieval and distribution mechanisms. [Outcome: 4, 6]</p> <p>REU.1.BP8: Record use of assets. Keep track of each reuse of assets and record information about actual reuse of assets. [Outcome: 5]</p> <p>REU.1.BP9: Notify re-users of asset status. Notify all asset re-users of any problems detected in the assets, modifications, new versions, and deletions from the asset storage and retrieval mechanism. [Outcome: 7]</p> <p>REU.1.BP10: Retire assets. Retire assets from the asset storage and retrieval mechanism following the defined asset management strategy. [Outcome: 3, 6, 7]</p>

5.9.2 REU.2 Reuse program management

Process ID	REU.2
Process Name	Reuse program management
Process Purpose	The purpose of the Reuse program management process is to plan, establish, manage, control, and monitor an organization's reuse program and to systematically exploit reuse opportunities.
Process Outcomes	<p>As a result of successful implementation of Reuse program management process:</p> <ol style="list-style-type: none"> 1) the organization's reuse strategy, including its purpose, scope, goals and objectives, is defined; 2) the domains for potential reuse opportunities are identified; 3) the organization's systematic reuse capability is assessed; 4) the reuse potential of each domain is assessed; 5) reuse proposals are evaluated to ensure the reuse product is suitable for the proposed application; 6) the reuse strategy is implemented in the organization; 7) feedback, communication, and notification mechanisms are established, that operate between affected parties; and 8) the reuse program is monitored and evaluated. <p>NOTE: The affected parties may include reuse program administrators, asset managers, domain engineers, developers, operators and maintainers.</p>
Base Practices	<p>REU.2.BP1: Define organizational reuse strategy. Define the reuse program and necessary supporting infrastructure for the organization. [Outcome: 1]</p> <p>REU.2.BP2: Identify domains for potential reuse. Identify set(s) of systems and their components in terms of common properties that can be organized into a collection of reusable assets that may be used to construct systems in the domain. [Outcome: 2]</p> <p>REU.2.BP3: Assess reuse capability. Gain an understanding of the reuse readiness and</p>

	<p>capability of the organization, to provide a baseline and success criteria for reuse program management. [Outcome: 3]</p> <p>REU.2.BP4: Assess domains for potential reuse. Assess each domain to identify potential use and applications of reusable components and products. [Outcome: 4]</p> <p>REU.2.BP5: Evaluate reuse proposals. Evaluate suitability of the provided reusable components and product(s) to proposed use. [Outcome: 5]</p> <p>REU.2.BP6: Implement the reuse program. Perform the defined activities identified in the reuse program. [Outcome: 6]</p> <p>REU.2.BP7: Collect and manage learning. Collect learning and information from project and related processes, analyze them and stored them into the process repository. [Outcome: 7]</p> <p>REU.2.BP8: Get feedback from reuse. Establish feedback, assessment, communication and notification mechanism to control the progress of the reuse program. [Outcome: 7, 8]</p> <p>REU.2.BP9: Monitor reuse. Monitor the implementation of the reuse program periodically and evaluate its suitability to actual needs. [Outcome: 6, 8]</p>

5.9.3 REU.3 Domain engineering

Process ID	REU.3
Process Name	Domain engineering

Process Purpose	The purpose of the Domain engineering process is to develop and maintain domain models, domain architectures and assets for the domain.
Process Outcomes	<p>As a result of successful implementation of the Domain engineering process:</p> <ol style="list-style-type: none"> 1) the representation forms for the domain models and the domain architectures are selected; 2) the boundaries of the domain and its relationships to other domains are established; 3) a domain model that captures the essential common and different features, capabilities, concepts, and functions in the domain are developed; 4) a domain architecture describing the family of systems within the domain is developed; 5) assets belonging to the domain are specified; 6) assets belonging to the domain are acquired or developed and maintained throughout their life cycles; and 7) the domain models and architectures are maintained throughout their life cycles.
Base Practices	<p>REU.3.BP1: Define criteria for domain definitions. Select the domain representation forms, domain classifications and other needed description templates to be used for the domain models and domain architectures, in accordance with the organization's reuse standards. [Outcome: 1]</p> <p>REU.3.BP2: Define domain models. Develop domain descriptions according to the representation forms. [Outcome: 2, 3, 4]</p> <p>REU.3.BP3: Define domain architectures. Develop domain architectures and its technical interfaces with other domains. [Outcome: 2, 4]</p> <p>NOTE 1: This base practice can be performed by executing System requirements analysis process (ENG.2) and/or Software requirements analysis process (ENG.4).</p> <p>REU.3.BP4: Develop asset specifications. Develop asset specifications. [Outcome: 5]</p> <p>NOTE 2: This base practice can be performed by executing Software requirements analysis process (ENG.4) and/or Software design process (ENG.5).</p> <p>REU.3.BP5: Provide domain assets. Submit specified domain assets for use in products. [Outcome: 6]</p> <p>NOTE 3: This base practice can be performed by executing acquisition processes (ACQ.1...ACQ.5) and/or in technical development processes (ENG.5...ENG.8).</p> <p>REU.3.BP6: Maintain domain assets. Analyse and monitor change requests to maintain domain assets and perform required technical implementation activities. [Outcome: 6]</p> <p>NOTE 4: This base practice can be performed by executing Software and system maintenance process (ENG.12) and/or Problem resolution management process (SUP.9).</p>

6 Process capability indicators (level 1 to 5)

This clause presents the process capability indicators related to the process attributes associated with capability levels 1 to 5 defined in the capability dimension of the process assessment model. Process capability indicators are the means of achieving the capabilities addressed by the considered process attributes. Evidence of process capability indicators support the judgment of the degree of achievement of the process attribute.

The capability dimension of the process assessment model consists of six capability levels matching the capability levels defined in Part 2 of this International Standard. This clause describes the process capability indicators for the 9 process attributes included in the capability dimension for level 1 to 5. Clause 5 describes the assessment indicators for process performance which is characterized by Level 1 process capability.

Level 0 does not include any type of indicators, as it reflects a non-implemented process or a process which fails to partially achieve any of its outcomes.

NOTE In the next paragraphs, ISO/IEC 15504-2 process attribute definitions and attribute outcomes are identified with italic font.

6.1 Level 1: Performed process

6.1.1 PA 1.1 Process performance attribute.

The process performance attribute is a measure of the extent to which the process purpose is achieved. As a result of full achievement of this attribute:

a) *the process achieves its defined outcomes.*

6.1.1.1 Generic Practices for PA 1.1

GP 1.1.1 Achieve the process outcomes

Perform the intent of the base practices.

Produce work products that evidence the process outcomes.

NOTE 1 The assessment of a performed process is based on process performance indicators, which are defined in Clause 5 of this document.

NOTE 2 Generic resource indicators and Generic work product indicators do not exist for the assessment of the PA 1.1 attribute.

6.2 Level 2: Managed process

The previously described *Performed process* is now implemented in a managed fashion (planned, monitored and adjusted) and its work products are appropriately established, controlled and maintained.

The following attributes of the process demonstrate the achievement of this level:

6.2.1 PA 2.1 Performance management attribute

The performance management attribute is a measure of the extent to which the performance of the process is managed. As a result of full achievement of this attribute:

- a) *objectives for the performance of the process are identified;*
- b) *performance of the process is planned and monitored;*
- c) *performance of the process is adjusted to meet plans;*
- d) *responsibilities and authorities for performing the process are defined, assigned and communicated;*
- e) *resources and information necessary for performing the process are identified, made available, allocated and used;*
- f) *interfaces between the involved parties are managed to ensure both effective communication and also clear assignment of responsibility.*

6.2.1.1 Generic Practices for PA 2.1

GP 2.1.1 Identify the objectives for the performance of the process. Performance objectives may include – (1) quality of the artefacts produced, (2) process cycle time or frequency and (3) resource usage, (4) boundaries of the process. Performance objectives are identified based on process requirements.

Assumptions and constraints are considered when identifying the performance objectives.

GP 2.1.2 Plan and monitor the performance of the process to fulfil the identified objectives.

Plan(s) for the performance of the process are developed.

Key milestones for the performance of the process are established.

Schedule is defined and aligned with the approach to performing the process.

Process work product reviews are planned.

The process is performed according to the plan(s).

Process performance is monitored to ensure planned results are achieved.

GP 2.1.3 Control the performance of the process.

Appropriate actions are taken when planned results and objectives are not achieved.

The plan(s) are adjusted, as necessary.

Rescheduling is performed as necessary.

GP 2.1.4 Define responsibilities and authorities for performing the process.

Responsibilities, commitments and authorities to perform the process are defined, assigned and communicated.

Responsibilities and authorities to verify process work products are defined and assigned.

GP 2.1.5 Identify and make available resources to perform the process according to plan.

The human and infrastructure resources necessary for performing the process are identified, made available, allocated and used.

The information necessary to perform the process is identified and made available.

The necessary infrastructure and facilities are identified and made available.

GP 2.1.6 Manage the interfaces between involved parties.

The individuals and groups involved in the process performance are determined.

Responsibilities of the involved parties are assigned.

Interfaces between the involved parties are managed.

Communication is assured between the involved parties.

Communication between the involved parties is effective.

6.2.1.2 Generic Resources for PA 2.1

- Resources with identified objectives, responsibilities and authorities; [PA 2.1 Outcome a, d, e, f]
- Project planning, management and control tools, including time and cost reporting; [PA 2.1 Outcome b, c]
- Workflow management system; [PA 2.1 Outcome d, f]
- Email and/or other communication mechanisms; [PA 2.1 Outcome d, f]
- Information and/or experience repository; [PA 2.1 Outcome b, e]
- Problem and issues management mechanisms. [PA 2.1 Outcome c]

6.2.1.3 Generic Work Products for PA 2.1

08-00 Plan [PA 2.1 Outcome a, b, c, d, e, f]

- Defines objectives to perform the process.
- Describes assumptions and constraints considered in defining the objectives.
- Includes milestones and timetable to produce the work products of the process.
- Identifies tasks, resources, responsibilities and infrastructure needed to perform the process.
- Considers risks related to fulfil defined objectives.
- Identifies stakeholders and communication mechanisms to be used.
- Describes how the plan is controlled and adjusted when needed.

13-00 Record [PA 2.1 Outcome d, e, f]

- States results achieved or provides evidence of activities performed in a process.
- Provides evidence of communication, meetings, reviews and corrective actions.

14-00 Register [PA 2.1 Outcome c, e]

- Contains status information about corrective actions; schedule and work breakdown structure.
- Monitors identified risks.

15-00 Report [PA 2.1 Outcome b, c]

- Monitors process performance against defined objectives and plans.
- Identifies deviations in process performance.
- Describes results and status of the process.
- Provides evidence of management activities.

6.2.2 PA 2.2 Work product management attribute

The work product management attribute is a measure of the extent to which the work products produced by the process are appropriately managed. As a result of full achievement of this attribute:

- a) requirements for the work products of the process are defined;*
- b) requirements for documentation and control of the work products are defined;*
- c) work products are appropriately identified, documented, and controlled;*
- d) work products are reviewed in accordance with planned arrangements and adjusted as necessary to meet requirements.*

NOTE 1 *Requirements for documentation and control of work products may include requirements for the identification of changes and revision status, approval and re-approval of work products, and the creation of relevant versions of applicable work products available at points of use.*

NOTE 2 *The work products referred to in this clause are those that result from the achievement of the process outcomes.*

6.2.2.1 Generic Practices for PA 2.2

GP 2.2.1 Define the requirements for the work products.

The requirements for the work products to be produced are defined. Requirements may include defining contents and structure.

Quality criteria of the work products are identified.

Appropriate review and approval criteria for the work products are defined.

GP 2.2.2 Define the requirements for documentation and control of the work products.

Requirements for the documentation and control of the work products are defined. Such requirements may include requirements for (1) distribution, (2) identification of work products and their components (3) traceability

Dependencies between work products are identified and understood.

Requirements for the approval of work products to be controlled are defined.

GP 2.2.3 Identify, document and control the work products.

The work products to be controlled are identified.

Change control is established for work products.

The work products are documented and controlled in accordance with requirements.

Versions of work products are assigned to product configurations as applicable.

The work products are made available through appropriate access mechanisms.

The revision status of the work products may readily be ascertained.

GP 2.2.4 Review and adjust work products to meet the defined requirements.

Work products are reviewed according to defined requirements.

Work products are reviewed according to planned arrangements.

Issues arising from work product reviews are resolved.

6.2.2.2 Generic Resources for PA 2.2

- Requirement management method / toolset; [PA 2.2 Outcome a, b, c]
- Configuration management system; [PA 2.2 Outcome b, c]
- Documentation elaboration and support tool; [PA 2.2 Outcome b, c]
- Document identification and control procedure; [PA 2.2 Outcome b, c]
- Work product review methods and experiences; [PA 2.2 Outcome d]
- Review management method / toolset; [PA 2.2 Outcome d]
- Intranets, extranets and/or other communication mechanisms; [PA 2.2 Outcome b, c]
- Problem and issue management mechanisms. [PA 2.2 Outcome d]

6.2.2.3 Generic Work Products for PA 2.2

08-00 Plan [PA 2.2 Outcome b]

- Expresses selected policy or strategy to manage work products.
- Describes requirements to develop, distribute, and maintain the work products.
- Defines quality control actions needed to manage the quality of the work product.

13-00 Record [PA 2.2 Outcome d]

- Demonstrates work product reviews and contributes to traceability.
- Describes non-conformance detected during work product reviews.
- Provides evidence that the changes are under control.

14-00 Register [PA 2.2 Outcome c]

- Records the status of documentation or work product.

16-00 Repository [PA 2.2 Outcome c]

- Contains and makes available work products and/or configuration items.
- Supports monitoring of changes to work products.

18-00 Standard [PA 2.2 Outcome a]

- Defines the functional and non-functional requirements for work products.
- Identifies work product dependencies.
- Identifies approval criteria for documents.

20-00 Template [PA 2.2 Outcome a, b]

- Defines the attributes associated with a work product to be created.

21-00 Work product [PA 2.2 Outcome a, b, c, d]

- Demonstrates process specific work products to be managed.

6.3 Level 3: Established process

The previously described *Managed process* is now implemented using a defined process capable of achieving its process outcomes.

The following attributes of the process demonstrate the achievement of this level:

6.3.1 PA 3.1 Process definition attribute

The process definition attribute is a measure of the extent to which a standard process is maintained to support the deployment of the defined process. As a result of full achievement of this attribute:

- a) a standard process, including appropriate tailoring guidelines, is defined that describes the fundamental elements that must be incorporated into a defined process;*
- b) the sequence and interaction of the standard process with other processes are determined;*
- c) required competencies and roles, for performing a process are identified as part of the standard process;*
- d) required infrastructure and work environment for performing a process are identified as part of the standard process;*
- e) suitable methods for monitoring the effectiveness and suitability of the process are determined.*

NOTE 1 A standard process may be used as-is when deploying a defined process, in which case tailoring guidelines would not be necessary.

6.3.1.1 Generic Practices for PA 3.1

GP 3.1.1 Define the standard process that will support the deployment of the defined process.

A standard process is developed that includes the fundamental process elements.

The standard process identifies the deployment needs and deployment context.

Guidance and/or procedures are provided to support implementation of the process as needed.

Appropriate tailoring guideline(s) are available as needed.

GP 3.1.2 Determine the sequence and interaction between processes so that they work as an integrated system of processes.

The standard process's sequence and interaction with other processes are determined.

Deployment of the standard process as a defined process maintains integrity of processes.

GP 3.1.3 Identify the roles and competencies for performing the standard process.

Process performance roles are identified

Competencies for performing the process are identified.

GP 3.1.4 Identify the required infrastructure and work environment for performing the standard process.

Process infrastructure components are identified (facilities, tools, networks, methods, etc).

Work environment requirements are identified.

GP 3.1.5 Determine suitable methods to monitor the effectiveness and suitability of the standard process.

Methods for monitoring the effectiveness and suitability of the process are determined.

Appropriate criteria and data needed to monitor the effectiveness and suitability of the process are defined.

The need to establish the characteristics of the process is considered.

The need to conduct internal audit and management review is established.

Process changes are implemented to maintain the standard process.

6.3.1.2 Generic Resources for PA 3.1

- Process modeling methods / tools; [PA 3.1 Outcome a, b, c, d]
- Training material and courses. [PA 3.1 Outcome a, b, c]
- Resource management system. [PA 3.1 Outcome b, c]
- Process infrastructure. [PA 3.1 Outcome a, b]
- Audit and trend analysis tools. [PA 3.1 Outcome e]
- Process monitoring method. [PA 3.1 Outcome e]

6.3.1.3 Generic Work Products for PA 3.1

09-00 Policy [PA 3.1 Outcome a, b, c, d, e]

- Provides evidence of organizational commitment to maintain a standard process to support the deployment of the defined process.

10-00 Process description [PA 3.1 Outcome a, b, c, e]

- Describes the standard process, including the fundamental process elements, interactions with other processes and appropriate tailoring guidelines.
- Addresses the performance, management and deployment of the process, as described by capability levels 1 and 2 and the PA 3.2 Process deployment attribute.
- Addresses methods to monitor process effectiveness and suitability.
- Identifies data and records to be collected when performing the defined process, in order to improve the standard process.
- Identifies and communicates the personnel competencies, roles and responsibilities for the standard and defined process.
- Identifies the personnel performance criteria for the standard and defined process.
- Identifies the tailoring guidelines for the standard process.

16-00 Repository [PA 3.1 Outcome d]

- Is used to support and maintain the standard process assets.

18-00 Standard [PA 3.1 Outcome a]

- Provides reference for the standards used by the standard process and identification about how they are used.

19-00 Strategy [PA 3.1 Outcome c, d]

- Identifies approaches for defining, maintaining and supporting a standard process, including infrastructure, work environment, training, internal audit and management review.

6.3.2 PA 3.2 Process deployment attribute

The process deployment attribute is a measure of the extent to which the standard process is effectively deployed as a defined process to achieve its process outcomes. As a result of full achievement of this attribute:

- a) a defined process is deployed based upon an appropriately selected and/or tailored standard process;*
- b) required roles, responsibilities and authorities for performing the defined process are assigned and communicated;*
- c) personnel performing the defined process are competent on the basis of appropriate education, training, and experience;*
- d) required resources and information necessary for performing the defined process are made available, allocated and used;*
- e) required infrastructure and work environment for performing the defined process are made available, managed and maintained;*
- f) appropriate data are, collected and analysed as a basis for understanding the behaviour of, and to demonstrate the suitability and effectiveness of the process, and to evaluate where continuous improvement of the process can be made.*

NOTE 1 Competency results from a combination of knowledge, skills and personal attributes that are gained through education, training and experience.

6.3.2.1 Generic Practices for PA 3.2

GP 3.2.1 Deploy a defined process that satisfies the context specific requirements of the use of the standard process.

The defined process is appropriately selected and/or tailored from the standard process.

Conformance of defined process with standard process requirements is verified.

GP 3.2.2 Assign and communicate roles, responsibilities and authorities for performing the defined process.

The roles for performing the defined process are assigned and communicated.

The responsibilities and authorities for performing the defined process are assigned and communicated.

GP 3.2.3 Ensure necessary competencies for performing the defined process.

Appropriate competencies for assigned personnel are identified.

Suitable training is available for those deploying the defined process.

GP 3.2.4 Provide resources and information to support the performance of the defined process.

Required human resources are made available, allocated and used.

Required information to perform the process is made available, allocated and used.

GP 3.2.5 Provide adequate process infrastructure to support the performance of the defined process.

Required infrastructure and work environment is available.

Organizational support to effectively manage and maintain the infrastructure and work environment is available.

Infrastructure and work environment is used and maintained.

GP 3.2.6 Collect and analyse data about performance of the process to demonstrate its suitability and effectiveness.

Data required to understand the behaviour, suitability and effectiveness of the defined process are identified.

Data are collected and analysed to understand the behaviour, suitability and effectiveness of the defined process.

Results of the analysis are used to identify where continual improvement of the standard and/or defined process can be made.

6.3.2.2 Generic Resources for PA 3.2

- Feedback mechanisms (customer, staff, other stakeholders); [PA 3.2 Outcome f]
- Process repository; [PA 3.2 Outcome a, b]
- Resource management system; [PA 3.2 Outcome b, c, d]
- Knowledge management system. [PA 3.2 Outcome d]
- Problem and change management system; [PA 3.2 Outcome f]
- Working environment and infrastructure; [PA 3.2 Outcome e]
- Data collection analysis system. [PA 3.2 Outcome f]
- Process assessment framework; [PA 4.1 Outcome f]

- Audit / review system. [PA 3.2 Outcome f]

6.3.2.3 Generic Work Products for PA 3.2

03-00 Data [PA 3.2 Outcome f]

- Provides evidence that the project's defined process performance data was collected.

07-00 Measure [PA 3.2 Outcome f]

- Provides a basis to analyse data associated with the performance of the defined process.

08-00 Plan [PA 3.2 Outcome a, b, f]

- Expresses the strategy for the organizational support, allocation and use of the process infrastructure.
- Describes the project's resources and the elements of the infrastructure needed to deploy the defined process.
- Expresses the strategy to satisfy the project's training needs.
- Identifies process improvement proposal(s) based on analysis of suitability and effectiveness.

10-00 Process description [PA 3.2 Outcome a]

- Describes the defined process for use by the project.
- Describes the verification activities needed to ensure the conformance of the project's defined process with the organization's standard process.
- Represents the interactions of the project's defined process with other processes.

13-00 Record [PA 3.2 Outcome b, c, d, e]

- Provides evidence that the project personnel possess the required authorities, skills, experience and knowledge.
- Provides evidence that project personnel have received the required training to satisfy the needs of the project.
- Provides evidence that project infrastructure and working environment are made available and maintained for performing the defined process.

14-00 Register [PA 3.2 Outcome a, f]

- Records the status of required corrective actions.
- Captures the project's work breakdown structure needed to define the tasks and their dependencies.

15-00 Report [PA 3.2 Outcome f]

- Provides results of the analysis, recommended corrective action, feedback to the process owner and to the organization's standard process.
- Identifies improvement opportunities of the defined process.
- Provides evidence on the suitability and effectiveness of the defined process.

16-00 Repository [PA 3.2 Outcome d]

- Provides evidence that information is made available for performing the defined process.

6.4 Level 4: Predictable process

The previously described *Established process* now operates within defined limits to achieve its process outcomes.

The following attributes of the process demonstrate the achievement of this level:

6.4.1 PA 4.1 Process measurement attribute

The process measurement attribute is a measure of the extent to which measurement results are used to ensure that performance of the process supports the achievement of relevant process performance objectives in support of defined business goals. As a result of full achievement of this attribute:

- b) process information needs in support of relevant business goals are established;*
- c) process measurement objectives are derived from identified process information needs;*
- d) quantitative objectives for process performance in support of relevant business goals are established;*
- e) measures and frequency of measurement are identified and defined in line with process measurement objectives and quantitative objectives for process performance;*
- f) results of measurement are collected, analysed and reported in order to monitor the extent to which the quantitative objectives for process performance are met;*
- g) measurement results are used to characterise process performance.*

NOTE 1 Information needs may typically reflect management, technical, project, process or product needs.

NOTE 2 Measures may be either process measures or product measures or both.

6.4.1.1 Generic Practices for PA 4.1

GP 4.1.1 Identify process information needs, in relation with business goals.

Business goals relevant to establishing quantitative process measurement objectives for the process are identified.

Process stakeholders are identified and their information needs are defined.

Information needs support the relevant business goals.

GP 4.1.2 Derive process measurement objectives from process information needs.

Process measurement objectives to satisfy defined process information needs are defined.

GP 4.1.3 Establish quantitative objectives for the performance of the defined process, according to the alignment of the process with the business goals.

Process performance objectives are defined to explicitly reflect the business goals.

Process performance objectives are verified with organizational management and process owner(s) to be realistic and useful.

GP 4.1.4 Identify product and process measures that support the achievement of the quantitative objectives for process performance.

Detailed measures are defined to support monitoring, analysis and verification needs of process and product goals.

Measures to satisfy process measurement and performance objectives are defined.

Algorithms and methods to create derived measurement results from base measures are defined, as appropriate.

GP 4.1.5 Define responsibilities and establish infrastructure to collect product and process measures.

Data collection mechanism is created for all identified measures.

Frequency of data collection is defined.

Responsibilities for data collection are defined, for example at project, process and organizational levels.

Verification mechanism for base and derived measures is defined.

GP 4.1.6 Collect product and process measurement results through performing the defined process.

Required data is collected in an effective and reliable manner.

Measurement results are created from the collected data within defined frequency.

Analysis of measurement results is performed within defined frequency.

Measurement results are reported to those responsible for monitoring the extent to which qualitative objectives are met.

GP 4.1.7 Use the results of the defined measurement to monitor and verify the achievement of the process performance objectives.

Statistical or similar techniques are used to quantitatively understand process performance and capability within defined control limits.

Trends of process behaviour are identified.

6.4.1.2 Generic Resources for PA 4.1

- Management information (cost, time, reliability, profitability, customer benefits, risks etc.); [PA 4.1 Outcome a, c, d, e, f]
- Applicable measurement techniques; [PA 4.1 Outcome d]
- Product and process measurement tools and results databases. [PA 4.1 Outcome d, e, f]
- Process measurement framework. [PA 4.1 Outcome d, e, f]
- Tools for data analysis and measurement. [PA 4.1 Outcome b, c, d, e]

6.4.1.3 Generic Work Products for PA 4.1

03-00 Data [PA 4.1 Outcome e]

- Defines data to be collected as specified in plans and measures.

07-00 Measure [PA 4.1 Outcome a, b, d]

- Describes information needs and performance objectives.

- Provides a basis for analyzing process performance.
- Defines explicit criteria for data validation.
- Defines frequency of data collection.

08-00 Plan [PA 4.1 Outcome b, c]

- Defines quantitative objectives for process performance.
- Specifies measures for the process.
- Defines tasks and schedules to collect and analyse data.
- Allocates responsibilities and resources for measurement.

10-00 Process description [PA 4.1 Outcome a, d]

- Defines information needs for the process.
- Specifies candidate measures.

15-00 Report [PA 4.1 Outcome e, f]

- Provides results of process data analysis to identify process performance parameters.
- Monitors process performance based on results of measurement.

6.4.2 PA 4.2 Process control attribute

The process control attribute is a measure of the extent to which the process is quantitatively managed to produce a process that is stable, capable, and predictable within defined limits. As a result of full achievement of this attribute:

- a) suitable analysis and control techniques where applicable, are determined and applied;*
- b) control limits of variation are established for normal process performance;*
- c) measurement data are analysed for special causes of variation;*
- d) corrective actions are taken to address special causes of variation;*
- e) control limits are re-established (as necessary) following corrective action.*

6.4.2.1 Generic Practices for PA 4.2

GP 4.2.1 Determine analysis and control techniques, appropriate to control the process performance.

Process control analysis methods and techniques are defined.

Selected techniques are validated against process control objectives.

GP 4.2.2 Define parameters suitable to control the process performance.

Standard process definition is modified to include selection of parameters for process control.

Control limits for selected base and derived measurement results are defined.

GP 4.2.3 Analyse process and product measurement results to identify variations in process performance.

Measures are used to analyse process performance.

All situations when defined control limits are exceeded are recorded.

Each out-of-control case is analysed to identify potential cause(s) of variation.

Special causes of variation in performance are determined.

Results are provided to those responsible for taking action.

GP 4.2.4 Identify and implement corrective actions to address assignable causes.

Corrective actions are determined to address each assignable cause.

Corrective actions are implemented to address assignable causes of variation.

Corrective action results are monitored.

Corrective actions are evaluated to determine their effectiveness.

GP 4.2.5 Re-establish control limits following corrective action.

Process control limits are re-calculated (as necessary) to reflect process changes and corrective actions.

6.4.2.2 Generic Resources for PA 4.2

- Process control and analysis techniques; [PA 4.2 Outcome a, c]
- Statistical analysis tools / applications; [PA 4.2 Outcome b, c, e]
- Process control tools / applications. [PA 4.2 Outcome d, e]

6.4.2.3 Generic Work Products for PA 4.2

03-00 Data [PA 4.2 Outcome c]

- Provides measurement data to identify special causes of variation.

08-00 Plan [PA 4.2 Outcome a]

- Defines analysis methods and techniques at detailed level.

10-00 Process description [PA 4.2 Outcome b, e]

- Defines parameters for process control.
- Defines and maintains control limits for selected base and derived measurement results.

13-00 Record [PA 4.2 Outcome c, d]

- Provides information on defects and problems.
- Records the changes.

14-00 Register [PA 4.2 Outcome d]

- Documents corrective actions to be implemented.

- Monitors the status of corrective actions.

15-00 Report [PA 4.2 Outcome a, c, d, e]

- Provides analyzed measurement results of process performance.
- Identifies corrective actions to address assignable causes of variation.
- Ensures that selected techniques are effective and measures are validated.

16-00 Repository [PA 4.2 Outcome a, b, c, d, e]

- Collects the data and provides the basis for analysis, corrective actions and results reporting.

6.5 Level 5: Optimizing process

The previously described *Predictable process* is continuously improved to meet relevant current and projected business goals.

The following attributes of the process demonstrate the achievement of this level:

6.5.1 PA 5.1 Process innovation attribute

The process innovation attribute is a measure of the extent to which changes to the process are identified from analysis of common causes of variation in performance, and from investigations of innovative approaches to the definition and deployment of the process. As a result of full achievement of this attribute:

- process improvement objectives for the process are defined that support the relevant business goals;*
- appropriate data are analysed to identify common causes of variations in process performance;*
- appropriate data are analysed to identify opportunities for best practice and innovation;*
- improvement opportunities derived from new technologies and process concepts are identified;*
- an implementation strategy is established to achieve the process improvement objectives.*

6.5.1.1 Generic Practices for PA 5.1

GP 5.1.1 Define the process improvement objectives for the process that support the relevant business goals.

Directions to process innovation are set.

New business visions and goals are analyzed to give guidance for new process objectives and potential areas of process change.

Quantitative and qualitative process improvement objectives are defined and documented.

GP 5.1.2 Analyse measurement data of the process to identify real and potential variations in the process performance.

Measurement data are analysed and made available.

Causes of variation in process performance are identified and classified.

Common causes of variation are analysed to get quantitative understanding of their impact.

GP 5.1.3 Identify improvement opportunities of the process based on innovation and best practices.

Industry best practices are identified and evaluated.

Feedback on opportunities for improvement is actively sought.

Improvement opportunities are identified.

GP 5.1.4 Derive improvement opportunities of the process from new technologies and process concepts. Impact of new technologies on process performance is identified and evaluated.

Impact of new process concepts are identified and evaluated.

Improvement opportunities are identified,

Emergent risks are considered in identifying improvement opportunities

GP 5.1.5 Define an implementation strategy based on long-term improvement vision and objectives.

Commitment to improvement is demonstrated by organizational management and process owner(s).

Proposed process changes are evaluated and piloted to determine their benefits and expected impact on defined business objectives.

Changes are classified and prioritized based on their impact on defined improvement objectives.

Measures that validate the results of process changes are defined to determine expected effectiveness of the process change.

Implementation of the approved change(s) is planned as an integrated program or project.

Implementation plan and impact on business goals are discussed and reviewed by organizational management.

6.5.1.2 Generic Resources for PA 5.1

- Process improvement framework; [PA 5.1 Outcome a, d, e]
- Process feedback and analysis system (measurement data, causal analysis results etc.); [PA 5.1 Outcome b, c]
- Piloting and trialing mechanism. [PA 5.1 Outcome c, d]

6.5.1.3 Generic Work Products for PA 5.1

03-00 Data [PA 5.1 Outcome b, c]

- Provides analytical data to identify common causes of variation.
- Provides analytical data to identify opportunities for best practice and innovation.

05-00 Goals [PA 5.1 Outcome a]

- Define and maintain business goals.
- Provides evidence of management commitment.

08-00 Plan [PA 5.1 Outcome a, e]

- Defines improvement objectives for the process

- Allocates resources for improvement activities.
- Schedules activities for root cause analysis.

10-00 Process description [PA 5.1 Outcome c, d]

- Identifies potential areas of innovation and new technology.
- Incorporates approaches to root cause analysis.

13-00 Record [PA 5.1 Outcome b]

- Records data relevant to root cause analysis.

14-00 Register [PA 5.1 Outcome c, d]

- Identifies potential improvement opportunities.

15-00 Report [PA 5.1 Outcome b, d]

- Identifies potential innovations and process changes.
- Provides information for an analysis to identify common causes of variation in performance.
- Identifies common causes of defects and appropriate corrective actions.

16-00 Repository [PA 5.1 Outcome c, d]

- Records information on new technology and techniques.

19-00 Strategy [PA 5.1 Outcome e]

- Defines an approach to implementing selected improvements.

6.5.2 PA 5.2 Process optimization attribute

The process optimization attribute is a measure of the extent to which changes to the definition, management and performance of the process result in effective impact that achieves the relevant process improvement objectives. As a result of full achievement of this attribute:

- a) impact of all proposed changes is assessed against the objectives of the defined process and standard process;*
- b) implementation of all agreed changes is managed to ensure that any disruption to the process performance is understood and acted upon;*
- c) effectiveness of process change on the basis of actual performance is evaluated against the defined product requirements and process objectives to determine whether results are due to common or special causes.*

6.5.2.1 Generic Practices of PA 5.2

GP 5.2.1 Assess the impact of each proposed change against the objectives of the defined and standard process.

Objective priorities for process improvement are established.

Specified changes are assessed against product quality and process performance requirements and goals.

Impact of changes to other defined and standard processes is considered.

GP 5.2.2. Manage the implementation of agreed changes to selected areas of the defined and standard process according to the implementation strategy.

A mechanism is established for incorporating accepted changes into the defined and standard process (es) effectively and completely.

The factors that impact the effectiveness and full deployment of the process change are identified and managed, such as:

- Economic factors (productivity, profit, growth, efficiency, quality, competition, resources, and capacity);
- Human factors (job satisfaction, motivation, morale, conflict / cohesion, goal consensus, participation, training, span of control);
- Management factors (skills, commitment, leadership, knowledge, ability, organisational culture and risks);
- Technology factors (sophistication of system, technical expertise, development methodology, need of new technologies).

Training is provided to users of the process.

Process changes are effectively communicated to all affected parties.

Records of the change implementation are maintained.

GP 5.2.3 Evaluate the effectiveness of process change on the basis of actual performance against process performance and capability objectives and business goals.

Performance and capability of the changed process are measured and compared with historical data.

A mechanism is available for documenting and reporting analysis results to management and owners of standard and defined process.

Measures are analysed to determine whether results are due to common or special causes.

Other feedback is recorded, such as opportunities for further improvement of the standard process.

6.5.2.2 Generic Resources for PA 5.2

- Change management system; [PA 5.2 Outcome a, b, c]
- Process evaluation system (impact analysis, etc.). [PA 5.2 Outcome a, c]

6.5.2.3 Generic Work Products for PA 5.2

07-00 Measure [PA 5.2 Outcome c]

- Specifies measures derived from process improvement objectives.

08-00 Plan [PA 5.2 Outcome a, b]

- Defines activities and schedule for pilot change implementation.
- Allocates resources for pilot implementation.
- Assigns responsibility for pilot implementation.
- Defines activities and schedule for organizational implementation of process change.
- Allocates resources and responsibilities for organizational implementation.

- Specifies scope of pilot implementation of proposed change.

09-00 Policy [PA 5.2 Outcome a]

- Establishes expectations for conduct and evaluation of pilot improvements.

10-00 Process description [PA 5.2 Outcome b]

- Documents changes as a result of process improvement actions.

13-00 Record [PA 5.2 Outcome b]

- Contains records of all completed and in-progress pilot implementations.
- Records history of and justification for changes.

15-00 Report [PA 5.2 Outcome a, b, c]

- Describes results of pilot implementation of process change.
- Evaluates effectiveness of process compared to process improvement objectives.
- Provides details on implementation of organizational changes.
- Describes proposed changes to standard and defined process.

19-00 Strategy [PA 5.2 Outcome b]

- Identifies scope of pilot activities for the organization.

6.6 Related Processes for Process Attributes

Certain processes support achievement of the capabilities addressed by a process attribute. Table 11 lists those processes and indicates the relation between those processes and each process attributes (PA).

Table 11 — Related Processes for Process Attributes

Annex A (informative)

Conformity of the exemplar process assessment model

A.1 Introduction

This part of ISO/IEC 15504 sets out a Process Assessment Model that meets the requirements for conformance defined in ISO/IEC 15504-2. The Process Assessment Model can be used in the performance of assessments that meet the requirements of ISO/IEC 15504. It may also be used as an example for a Process Assessment Model developer.

This clause serves as the statement of conformance of the Process Assessment Model to the requirements defined in ISO/IEC 15504-2. For ease of reference, the requirements from Clause 6.3 of ISO/IEC 15504-2 are embedded verbatim in the text of this clause. They should not be construed as normative elements of this part of ISO/IEC 15504.

Since this Process Assessment Model has been explicitly constructed to be an elaboration of the Process Reference Model defined in ISO/IEC 12207 AMD 1 and 2, the conformance claim is relatively simple. For other models, particularly ones with a different architecture, the demonstration of conformance may be more difficult requiring more detail in the mapping.

A.2 Requirements for Process Assessment Models (from ISO/IEC 15504-2)

A.2.1 Introduction

In order to assure that assessment results are translatable into an ISO/IEC 15504 process profile in a repeatable and reliable manner, Process Assessment Models shall adhere to certain requirements. A Process Assessment Model shall contain a definition of its purpose, scope and elements; its mapping to the Measurement Framework and specified Process Reference Model(s); and a mechanism for consistent expression of results.

A Process Assessment Model is considered suitable for the purpose of assessing process capability by conforming to 6.3.2, 6.3.3, and 6.3.4.

[ISO/IEC 15504-2, 6.3.1]

The purpose of this Process Assessment Model is to support assessment of process capability in accordance with the requirements of ISO/IEC 15504-2 (Refer Clause 1).

A.2.2 Process Assessment Model scope

6.3.2.1 *A Process Assessment Model shall relate to at least one process from the specified Process Reference Model(s).*

6.3.2.2 *A Process Assessment Model shall address, for a given process, all, or a continuous subset, of the levels (starting at level 1) of the Measurement Framework for process capability for each of the processes within its scope.*

NOTE *It would be permissible for a model, for example, to address solely level 1, or to address levels 1, 2 and 3, but it would not be permissible to address levels 2 and 3 without level 1.*

6.3.2.3 *A Process Assessment Model shall declare its scope of coverage in the terms of:*

- a) *the selected Process Reference Model(s);*
- b) *the selected processes taken from the Process Reference Model(s);*
- c) *the capability levels selected from the Measurement Framework.*

[ISO/IEC 15504-2, 6.3.2]

This Process Assessment Model is based upon the Process Reference Model defined in ISO/IEC 12207 AMD 1 and AMD 2.

In the process dimension of this Process Assessment Model, the model provides coverage of all but one of the processes in the Process Reference Model. These processes are identified in Clause 5. The excluded process Usability has a dedicated PAM defined in ISO/IEC 18529 Human Centered Lifecycle Process.

In the capability dimension of this Process Assessment Model, the model addresses all of the capability levels defined in the Measurement Framework in ISO/IEC 15504-2, Clause 5.

A.2.3 Process Assessment Model elements and indicators

A Process Assessment Model shall be based on a set of indicators that explicitly addresses the purposes and outcomes, as defined in the selected Process Reference Model, of all the processes within the scope of the Process Assessment Model; and that demonstrates the achievement of the process attributes within the capability level scope of the Process Assessment Model. The indicators focus attention on the implementation of the processes in the scope of the model.

[ISO/IEC 15504-2, 6.3.3]

The Process Assessment Model provides a two-dimensional view of process capability for the processes in the Process Reference Model, through the inclusion of assessment indicators as shown in Figure 3. The Assessment Indicators used are:

- base practices and work products; and
- generic practices, generic resources and generic work products

as shown in Figure 3. They support the judgment of the performance and capability of an implemented process.

A.2.4 Mapping Process Assessment Models to Process Reference Models

A Process Assessment Model shall provide an explicit mapping from the relevant elements of the model to the processes of the selected Process Reference Model and to the relevant process attributes of the Measurement Framework.

The mapping shall be complete, clear and unambiguous. The mapping of the indicators within the Process Assessment Model shall be to:

- a) *the purposes and outcomes of the processes in the specified Process Reference Model;*
- b) *the process attributes (including all of the results of achievements listed for each process attribute) in the Measurement Framework.*

This enables Process Assessment Models that are structurally different to be related to the same Process Reference Model.

[ISO/IEC 15504-2, 6.3.4]

Each of the Processes in this Process Assessment Model is identical in scope to the Process defined in the Process Reference Model. Each Base Practice is cross-referenced to the Process Outcomes it addresses. All Work Products relate as Inputs or Outputs to the Process as a whole.

Each of the Process Attributes in this Process Assessment Model is identical to the Process Attribute defined in the Measurement Framework. The Generic Practices address the characteristics from each Process Attribute. The Generic Resources and Generic Work Products relate to the Process Attribute as a whole.

Table A.1 lists the mappings of the GPs to the achievements associated with each Process Attribute.

Table A.1 — Mapping of Generic Practices

GP	Practice Name	Maps To
PA 1.1: Process performance attribute		
GP 1.1.1	Achieve the process outcomes.	PA.1.1.a
PA 2.1: Performance management attribute		
GP 2.1.1	Identify the objectives for the performance of the process.	PA.2.1.a
GP 2.1.2	Plan and monitor the performance of the process to fulfil the identified objectives.	PA.2.1.b
GP 2.1.3	Control the performance of the process.	PA.2.1.c
GP 2.1.4	Define responsibilities and authorities for performing the process.	PA.2.1.d
GP 2.1.5	Identify and make available resources to perform the process according to plan.	PA.2.1.e
GP 2.1.6	Manage the interfaces between involved parties.	PA.2.1.f
PA 2.2: Work product management attribute		
GP 2.2.1	Define the requirements for the work products.	PA.2.2.a
GP 2.2.2	Define the requirements for documentation and control of the work products.	PA.2.2.b
GP 2.2.3	Identify, document and control the work products.	PA.2.2.c
GP 2.2.4	Review and adjust work products to meet the defined requirements.	PA.2.2.d
PA 3.1: Process definition attribute		
GP 3.1.1	Define the standard process that will support the deployment of the defined process.	PA.3.1.a
GP 3.1.2	Determine the sequence and interaction between processes so that they work as an integrated system of processes.	PA.3.1.b
GP 3.1.3	Identify the roles and competencies for performing the process.	PA.3.1.c
GP 3.1.4	Identify the required infrastructure and work environment for performing the process.	PA.3.1.d
GP 3.1.5	Determine suitable methods to monitor the effectiveness and suitability of the process.	PA.3.1.e
PA 3.2: Process deployment attribute		
GP 3.2.1	Deploy a defined process that satisfies the context specific requirements of the use of the standard process.	PA.3.2.a
GP 3.2.2	Assign and communicate roles, responsibilities and authorities for performing the defined process.	PA.3.2.b
GP 3.2.3	Ensure necessary competencies for performing the defined process.	PA.3.2.c

GP	Practice Name	Maps To
GP.3.2.4	Provide resources and information to support the performance of the defined process.	PA.3.2.d
GP 3.2.5	Provide process infrastructure to support the performance of the defined process.	PA.3.2.e
GP 3.2.6	Collect and analyse data about performance of the process to demonstrate its suitability and effectiveness.	PA.3.2.f
PA 4.1 Process measurement attribute		
GP 4.1.1	Identify process information needs, in relation with business goals.	PA.4.1.a
GP.4.1.2	Derive process measurement objectives from process information needs.	PA.4.1.b
GP 4.1.3	Establish quantitative objectives for the performance of the defined process, according to the alignment of the process with the business goals.	PA.4.1.c
GP 4.1.4	Identify product and process measures that support the achievement of the quantitative objectives for process performance.	PA.4.1.d
GP 4.1.5	Define responsibilities and establish infrastructure to collect product and process measures.	PA.4.1.d
GP 4.1.6	Collect product and process measurement results through performing the defined process.	PA.4.1.e
GP 4.1.7	Use the results of the defined measurement to monitor and verify the achievement of the process performance objectives.	PA.4.1.f
PA 4.2 Process control attribute		
GP 4.2.1	Determine analysis and control techniques, appropriate to control the process performance.	PA.4.2.a
GP 4.2.2	Define parameters suitable to control the process performance.	PA.4.2.b
GP 4.2.3	Analyse process and product measurement results to identify variations in process performance.	PA.4.2.c
GP 4.2.4	Identify and implement corrective actions to address assignable causes.	PA.4.2.d
GP.4.2.5	Re-establish control limits following corrective action.	PA.4.2.e
PA 5.1 Process innovation attribute		
GP 5.1.1	Define the process improvement objectives for the process that support the relevant business goals.	PA.5.1.a
GP 5.1.2	Analyse measurement data of the process to identify real and potential variations in the process performance.	PA.5.1.b
GP 5.1.3	Identify improvement opportunities of the process based on innovation and best practices.	PA.5.1.c
GP.5.1.4	Derive improvement opportunities from new technologies and process concepts.	PA.5.1.d
GP 5.1.5	Define an implementation strategy based on long-term improvement vision and objectives.	PA.5.1.e
PA 5.2 Process optimization attribute		
GP 5.2.1	Assess the impact of each proposed change against the objectives of the defined and standard process.	PA.5.2.a
GP 5.2.2	Manage the implementation of agreed changes according to the implementation strategy.	PA.5.2.b

GP	Practice Name	Maps To
GP 5.2.3	Evaluate the effectiveness of process change on the basis of actual performance against process objectives and business goals.	PA.5.2.c

A.2.5 Expression of assessment results

A Process Assessment Model shall provide a formal and verifiable mechanism for representing the results of an assessment as a set of process attribute ratings for each process selected from the specified Process Reference Model(s).

NOTE The expression of results may involve a direct translation of Process Assessment Model ratings into a process profile as defined in this international standard, or the conversion of the data collected during the assessment (with the possible inclusion of additional information) through further judgment on the part of the assessor.

[ISO/IEC 15504-2, 6.3.5]

The processes in this Process Assessment Model are identical to those defined in the Process Reference Model. The Process Attributes and the Process Attributes Rating in this Process Assessment Model are identical to those defined in the Measurement Framework. As a consequence, results of Assessments based upon this Process Assessment Model are expressed directly as a set of process attribute ratings for each process within the scope of the assessment. No form of translation or conversion is required.

Annex B (informative)

Work product characteristics

Work product characteristics listed in this Annex can be used when reviewing potential inputs and outputs of process implementation. The characteristics are provided as guidance for the attributes to look for, in a particular sample work product, to provide objective evidence supporting the assessment of a particular process. A documented process and assessor judgment is needed to ensure that the process context (application domain, business purpose, development methodology, size of the organization, etc.) is considered when using this information. Work products are defined using the schema in Table B.1. Work products and their characteristics should be considered as a starting point for considering whether, given the context, they are contributing to the intended purpose of the process, not as a check-list of what every organization must have.

Table B.1 — Work product identification

Work product identifier #	An identifier number for the work product which is used to reference the work product.
Work product identifier # (according to TR 15504-5 Annex C)	An identifier number for the work product which is used to reference the work product - equivalent from TR 15504 Part 5 Annex C
Work product name	Provides an example of a typical name associated with the work product characteristics. This name is provided as an identifier of the type of work product the practice or process might produce. Organizations may call these work products by different names. The name of the work product in the organization is not significant. Similarly, organizations may have several equivalent work products which contain the characteristics defined in one work product type. The formats for the work products can vary. It is up to the assessor and the organizational unit coordinator to map the actual work products produced in their organization to the examples given here.
Work product characteristics	Provides examples of the potential characteristics associated with the work product types. The assessor may look for these in the samples provided by the organizational unit.

B.1 Generic Work products

The Generic Work Product Indicators are sets of characteristics that would be expected to be evident in work products of generic types as a result of achievement of an attribute. The generic work products form the basis for the classification of the work products defined as process performance indicators. These work product types are basic input types to process owners of all types of processes.

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
01-00	093	Configuration item	<ul style="list-style-type: none"> – Item which is maintained under configuration control: <ul style="list-style-type: none"> – may include modules, subsystems, libraries, test cases, compilers, data, documentation, physical media, and external interfaces – Version identification is maintained – Description of the item is available including things like: <ul style="list-style-type: none"> – type of item – associated configuration management library, file, system – responsible owner – date when placed under configuration control – status information (i.e., development, baselined, released) – relationship to lower level configured items – identification of the change control records – identification of change history

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
02-00	051	Contract	<ul style="list-style-type: none"> – Defines what is to be purchased or delivered – Identifies time frame for delivery or contracted service dates – Identifies any statutory requirements – Identifies monetary considerations – Identifies any warranty information – Identifies any copyright and licensing information – Identifies any customer service requirements – Identifies service level requirements – References to any performance and quality expectations / constraints / monitoring – Standards and procedures to be used – Evidence of review and approval – As appropriate to the contract the following are considered: <ul style="list-style-type: none"> – references to any acceptance criteria – references to any special customer needs (i.e., confidentiality requirements, security, hardware, etc.) – references to any change management and problem resolution procedures – identifies any interfaces to independent agents and subcontractors – identifies customer's role in the development and maintenance process – identifies resources to be provided by the customer
03-00		Data	<ul style="list-style-type: none"> – Result of applying a measure
04-00		Design	<ul style="list-style-type: none"> – Describes the overall product / system structure – Identifies the required product / system elements – Identifies the relationship between elements – Consideration is given to: <ul style="list-style-type: none"> – any required performance characteristics – any required interfaces – any required security characteristics

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
05-00	012	Goals	<ul style="list-style-type: none"> – Identifies the objective to be achieved – Identifies who is expected to achieve the goal – Identifies any incremental supporting goals – Identifies any conditions / constraints – Identifies the timeframe for achievement – Are reasonable and achievable within the resources allocated – Are current, established for current project, organization – Are optimized to support known performance criteria and plans
06-00		User documentation	<ul style="list-style-type: none"> – Identifies: <ul style="list-style-type: none"> – external documents – internal documents – current site distribution and maintenance list maintained – Documentation kept synchronized with latest product release – Addresses technical issues
07-00	036	Measure	<ul style="list-style-type: none"> – Available to those with a need to know – Understood by those expected to use them – Provides value to the organization / project – Non-disruptive to the work flow – Appropriate to the process, life cycle model, organization: <ul style="list-style-type: none"> – is accurate – source data is validated – results are validated to ensure accuracy – Has appropriate analysis and commentary to allow meaningful interpretation by users

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-00	016	Plan	<p>(As appropriate to the application and purpose)</p> <ul style="list-style-type: none"> – Identification of the plan owner – Includes: <ul style="list-style-type: none"> – – the objective and scope of what is to be accomplished – – assumptions made – – constraints – – risks – – tasks to be accomplished – – schedules, milestones and target dates – – critical dependencies – – maintenance disposition for the plan – Method / approach to accomplish plan – Identifies: <ul style="list-style-type: none"> – – task ownership, including tasks performed by other parties (e.g. supplier, customer) – – quality criteria – – required work products – Includes resources to accomplish plan objectives: <ul style="list-style-type: none"> – – time – – staff (key roles and authorities e.g. sponsor) – – materials / equipment – – budget – Includes contingency plan for non-completed tasks – Plan is approved
09-00	014	Policy	<ul style="list-style-type: none"> – Authorized – Available to all personnel impacted by the policy – Establishes practices / rules to be adhered to

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
10-00	003	Process description	<ul style="list-style-type: none"> – A detailed description of the process / procedure which includes: <ul style="list-style-type: none"> – tailoring of the standard process (if applicable) – purpose of the process – outcomes of the process – task and activities to be performed and ordering of tasks – critical dependencies between task activities – expected time required to execute task – input / output work products – links between input and outputs work products – Identifies process entry and exit criteria – Identifies internal and external interfaces to the process – Identifies process measures – Identifies quality expectations – Identifies functional roles and responsibilities – Approved by authorised personnel
11-00		Product	<ul style="list-style-type: none"> – Is a result / deliverable of the execution of a process, includes services, systems (software and hardware) and processed materials – Has elements that satisfy one or more aspects of a process purpose – May be represented on various media (tangible and intangible)
12-00		Proposal	<ul style="list-style-type: none"> – Defines the proposed solution – Defines the proposed schedule – Identifies the coverage identification of initial proposal: <ul style="list-style-type: none"> – identifies the requirements that would be satisfied – identifies the requirements that could not be satisfied, and provides a justification of variants – Defines the estimated price of proposed development, product, or service
13-00		Record	<ul style="list-style-type: none"> – Work product stating results achieved or provides evidence of activities performed in a process – An item that is part of a set of identifiable and retrievable data

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
14-00		Register	<ul style="list-style-type: none"> – A register is a compilation of data or information captured in a defined sequence to enable: <ul style="list-style-type: none"> – an overall view of evidence of activities that have taken place – monitoring and analyses – provides evidence of performance of a process over time
15-00		Report	<ul style="list-style-type: none"> – A work product describing a situation that: <ul style="list-style-type: none"> – includes results and status – identifies applicable / associated information – identifies considerations / constraints – provides evidence / verification
16-00		Repository	<ul style="list-style-type: none"> – Repository for components – Storage and retrieval capabilities – Ability to browse content – Listing of contents with description of attributes – Sharing and transfer of components between affected groups – Effective controls over access – Maintain component descriptions – Recovery of archive versions of components – Ability to report component status – Changes to components are tracked to change / user requests
17-00	052	Requirement specification	<ul style="list-style-type: none"> – Each requirement is identified – Each requirement is unique – Each requirement is verifiable or can be assessed – Includes statutory and regulatory requirements – Includes issues / requirements from (contract) review
18-00	009	Standard	<ul style="list-style-type: none"> – Identification of who / what they apply to – Expectations for conformance are identified – Conformance to requirements can be demonstrated – Provisions for tailoring or exception to the requirements are included

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
19-00		Strategy	<ul style="list-style-type: none"> – Identifies what needs and objectives or goals there are to be satisfied – Establishes the options and approach for satisfying the needs, objectives, or goals – Establishes the evaluation criteria against which the strategic options are evaluated – Identifies any constraints / risks and how these will be addressed
20-00		Template	<ul style="list-style-type: none"> – Defines the attributes associated with a work product to be created as a consequence of a process execution – Identifies technical elements typically associated with this product type – Defines expected form and style
21-00	007	Work product	<ul style="list-style-type: none"> – Defines the attributes associated with an artefact from a process execution: – – key elements to be represented in the work product

B.2 Generic and specific work products

Specific work product types are typically created by process owners and applied by process deployers in order to satisfy an outcome of a particular process purpose.

NOTE: Generic work product types are included in the list for completeness.

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
01-00	093	Configuration item	<ul style="list-style-type: none"> – Item which is maintained under configuration control: <ul style="list-style-type: none"> – may include modules, subsystems, libraries, test cases, compilers, data, documentation, physical media, and external interfaces – Version identification is maintained – Description of the item is available including things like: <ul style="list-style-type: none"> – type of item – associated configuration management library, file, system – responsible owner – date when placed under configuration control – status information (i.e., development, baselined, released) – relationship to lower level configured items – identification of the change control records – identification of change history
01-01	100	Product configuration	<ul style="list-style-type: none"> – Overview of the system's configuration – Defines each element and their position in the architecture of the system – Defines the key system interfaces – Defines any network considerations – Defines the hardware configuration – Defines any system performance / parameter settings
01-02	034	Reusable object	<ul style="list-style-type: none"> – Developed to be: <ul style="list-style-type: none"> – highly reliable – generically defined (generic names, structures, etc.) – interfaces (inputs and outputs) clear – data encapsulated – Modification controlled – Modifications are downward compatible – Specification for usage defined – Specification for tailoring defined

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
01-03		Software item	<ul style="list-style-type: none"> – Integrated software consisting of: <ul style="list-style-type: none"> – source code – software elements – executable code – configuration files – Documentation, which: <ul style="list-style-type: none"> – describes and identifies source code – describes and identifies software elements – describes and identifies configuration files – describes and identifies executable code – describes software life-cycle status – describes archive and release criteria – describes compilation of software units – describes building of software item
01-04		Knowledge item	<ul style="list-style-type: none"> – Explicit piece of experience: <ul style="list-style-type: none"> – documented for sharing – controlled and maintained

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
02-00	051	Contract	<ul style="list-style-type: none"> – Defines what is to be purchased or delivered – Identifies time frame for delivery or contracted service dates – Identifies any statutory requirements – Identifies monetary considerations – Identifies any warranty information – Identifies any copyright and licensing information – Identifies any customer service requirements – Identifies service level requirements – References to any performance and quality expectations / constraints / monitoring – Standards and procedures to be used – Evidence of review and approval – As appropriate to the contract the following are considered: <ul style="list-style-type: none"> – references to any acceptance criteria – references to any special customer needs (i.e., confidentiality requirements, security, hardware, etc.) – references to any change management and problem resolution procedures – identifies any interfaces to independent agents and subcontractors – identifies customer's role in the development and maintenance process – identifies resources to be provided by the customer
02-01	050	Commitment / agreement	<ul style="list-style-type: none"> – Signed off by all parties involved in the commitment / agreement – Establishes what the commitment is for – Establishes the resources required to full fill the commitment, such as: <ul style="list-style-type: none"> – time – people – budget – equipment – facilities
03-00		Data	<ul style="list-style-type: none"> – Result of applying a measure

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
03-01		Assessment data	<ul style="list-style-type: none"> – Identification of the objective evidence gathered – Rationale for the attribute achievement ratings – The set of process profiles resulting from the assessment (i.e. one profile for each process assessed with attributes ratings) – The identification of any additional information collected during the assessment that was identified in the assessment input to support process improvement or process capability determination
03-02		Asset use data	<ul style="list-style-type: none"> – Data must be consistent – Identification of used times and dates – Identification of the description of the asset, name of the asset or a unique identifier
03-03	043	Benchmarking data	<ul style="list-style-type: none"> – Identifies key process / product / market need information to be benchmarked – Measurement reflects comparison of the current performance against some well defined criteria or historical information (or benchmark)
03-04	086	Customer satisfaction data	<ul style="list-style-type: none"> – Determines levels of customer satisfaction with products and services – Mechanism to collect data on customer satisfaction: <ul style="list-style-type: none"> – results of field performance data – results of customer satisfaction survey – interview notes – meeting minutes from customer meetings
03-05		Personnel performance data	<ul style="list-style-type: none"> – Determines attributes of personnel performance to be measured – Mechanism to collect data on personnel performance: <ul style="list-style-type: none"> – results of task performance data – results of internal customer satisfaction survey – interview notes – meeting minutes from meetings with personnel
03-06	018	Process performance data	<ul style="list-style-type: none"> – Data comparing process performance against expected levels – Defined input and output work products available – Meeting minutes – Change records – Task completion criteria met – Quality criteria met – Resource allocation and tracking

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
03-07		Test data	<ul style="list-style-type: none"> – Identification of name – Identification of description – Identification of associated test cases
04-00		Design	<ul style="list-style-type: none"> – Describes the overall product / system structure – Identifies the required product / system elements – Identifies the relationship between elements – Consideration is given to: <ul style="list-style-type: none"> – any required performance characteristics – any required interfaces – any required security characteristics

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
04-01	101	Database design	<ul style="list-style-type: none"> – Definition of design characteristics: <ul style="list-style-type: none"> – database management system used – type of system (relational, hierarchical, object oriented, networked) – format of records, tables, objects – database access mode – associated software (programs, user screen formats, reports) – supported database language – Definition of logical and physical views, models: <ul style="list-style-type: none"> – records (data layouts, fields, tables, structures) – field names and definitions – data definitions, classes, structure, etc. – entity / relationships – classes, inheritance scheme – Definition of user views: <ul style="list-style-type: none"> – screen layouts – field access – data access – commands – Input / output interface considerations – Database usage information (contents, application systems, usage restrictions, etc.) – Identification of constraints: <ul style="list-style-type: none"> – security considerations – data access considerations – back-up and recovery considerations – system restart considerations – system generations considerations – performance considerations

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
04-02		Domain architecture	<ul style="list-style-type: none"> – Identified domain model(s) tailored from – Identified asset specifications – Definition of boundaries and relationships with other domains (Domain Interface Specification) – Identification of domain vocabulary – Identification of the domain representation standard – Provide an overview of the functions, features capabilities and concepts in the domains
04-03		Domain model	<ul style="list-style-type: none"> – Must provide a clear explanation and description, on usage and properties, for reuse purposes – Identification of the management and structures used in the model
04-04	054	High level software design	<ul style="list-style-type: none"> – Describes the overall software structure – Identifies the required software elements – Identifies the relationship between software elements – Consideration is given to: <ul style="list-style-type: none"> – any required software performance characteristics – any required software interfaces – any required security characteristics required – any database design requirements – any required error handling and recovery attributes
04-05	055	Low level software design	<ul style="list-style-type: none"> – Provides detailed design (could be represented as a prototype, flow chart, entity relationship diagram, pseudo code, etc.) – Provides format of input / output data – Provides specification of data storage needs – Establishes required data naming conventions – Defines the format of required data structures – Defines the data fields and purpose of each required data element – Provides the specifications of the program structure

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
04-06	053	System architecture design	<ul style="list-style-type: none"> – Provides an overview of all system design – Describes the interrelationship between system elements – Describes the relationship between the system elements and the software – Specifies the design for each required system element, consideration is given to things like: <ul style="list-style-type: none"> – memory / capacity requirements – hardware interfaces requirements – user interfaces requirements – external system interface requirements – performance requirements – commands structures – security / data protection characteristics – system parameter settings – manual operations – reusable components – Mapping of requirements to system elements
04-07		Organizational structure	<ul style="list-style-type: none"> – Describes an organization: <ul style="list-style-type: none"> – structure – roles – responsibilities
05-00	012	Goals	<ul style="list-style-type: none"> – Identifies the objective to be achieved – Identifies who is expected to achieve the goal – Identifies any incremental supporting goals – Identifies any conditions / constraints – Identifies the timeframe for achievement – Are reasonable and achievable within the resources allocated – Are current, established for current project, organization – Are optimized to support known performance criteria and plans
05-01		Assessment goals	No requirements additional to Goals (Generic)

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
05-02		Business goals	<ul style="list-style-type: none"> – Identification of a name – Identification of a description – Identification of a requirement specification for the business need – Identifies association and interfaces to other goals – Identifies the level of degree of the need and effect on the business of not having that need.
05-03		Core values statement	<ul style="list-style-type: none"> – Defines the values that govern the relationships between internal and external stakeholders – Is authorized at the highest level
05-04		Mission statement	<ul style="list-style-type: none"> – Identifies the reasons for the existence of the enterprise – Informs the development of the core values and vision statement – Is authorised at the highest level
05-05	013	Vision statement	<ul style="list-style-type: none"> – Identifies the main objectives to be achieved – Provides information on the overall strategy for the organizational unit, organization, or business – Is authorized at the highest level
06-00		User documentation	<ul style="list-style-type: none"> – Identifies: <ul style="list-style-type: none"> – external documents – internal documents – current site distribution and maintenance list maintained – Documentation kept synchronized with latest product release – Addresses technical issues

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
06-01	105	Customer manual	<ul style="list-style-type: none"> – Takes account of: <ul style="list-style-type: none"> – audience and task profiles – the environment in which the information will be used – convenience to users – the range of technical facilities, including resources and the product, available for developing and delivering on-screen documentation – information characteristics – cost of delivery and maintainability – Includes information needed for operation of the system, including but not limited to: <ul style="list-style-type: none"> – product and version information – instructions for handling the system – initial familiarisation information – long examples – structured reference material, particularly for advanced features of the software – checklists – guides to use input devices
06-02	080	Handling and storage guide	<ul style="list-style-type: none"> – Defines the tasks to perform in handling and storing products including: <ul style="list-style-type: none"> – – providing for master copies of code and documentation – – disaster recovery – – addressing appropriate critical safety and security issues – Provides a description of how to store the product including: <ul style="list-style-type: none"> – – storage environment required – – the protection media to use – – packing materials required – – what items need to be stored – – assessments to be done on stored product – Provides retrieval instructions

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
06-03	075	Installation guide	<ul style="list-style-type: none"> – Tasks for loading / installing product sequentially order by execution requirements: – – downloading of software from delivery files – – up-loading to appropriate software to files, folders, libraries, etc. – – partial or upgrade installation instructions, where applicable – – initialization procedures – – conversion procedures – – customization / configuration procedures – – verification procedures – – bring-up procedures – – operations instructions – Installation requirements identified: – – associated hardware, software, customer documentation – – conversion programs and instructions – – initialization programs, system generation information – – components and descriptions – – minimum configuration of hardware / software required – – backup / recovery instructions – – validation programs – – configuration parameters (e.g. size requirements, memory) – Customer / technical support contacts
06-04	090	Training material	<ul style="list-style-type: none"> – Updated and available for new releases – Coverage of system, application, operations, maintenance as appropriate to the application – Courses listings and availability

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
06-05		Product operation guide	<ul style="list-style-type: none"> – Criteria for operational use – Provides a description of how to operate the product including: <ul style="list-style-type: none"> – operational environment required – supporting tools and material (e.g. user manuals) required – possible safety warnings – start-up preparations and sequence – frequently asked questions (FAQ) – sources of further information and help to operate the product – Certification and safety approvals – Warranty and replacement instructions
07-00	036	Measure	<ul style="list-style-type: none"> – Available to those with a need to know – Understood by those expected to use them – Provides value to the organization / project – Non-disruptive to the work flow – Appropriate to the process, life cycle model, organization: <ul style="list-style-type: none"> – is accurate – source data is validated – results are validated to ensure accuracy – Has appropriate analysis and commentary to allow meaningful interpretation by users
07-01	085	Customer satisfaction survey	<ul style="list-style-type: none"> – Identification of customer and customer information – Date requested – Target date for responses – Identification of associated hardware / software / product configuration – Ability to record feedback

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
07-02	041	Field measure	<ul style="list-style-type: none"> – Measures attributes of the performance of system's operation at field locations, such as: <ul style="list-style-type: none"> – field defects – performance against defined service level measures – system ability to meet defined customer requirements – support time required – user complaints (may be third party users) – customers requests for help – performance trends – problem reports – enhancements requested
07-03		Personnel performance measure	<ul style="list-style-type: none"> – Real time measures of personnel performance or expected service level – Identifies things like: <ul style="list-style-type: none"> – capacity – throughput – operational performance – operational service – availability
07-04	038	Process measure	<ul style="list-style-type: none"> – Measures about the process' performance: <ul style="list-style-type: none"> – ability to produce sufficient work products – adherence to the process – time it takes to perform process – defects related to the process – Measures the impact of process change – Measures the efficiency of the process

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
07-05	037	Project measure	<ul style="list-style-type: none"> – Monitors key processes and critical tasks, provides status information to the project on: <ul style="list-style-type: none"> – project performance against established plan – resource utilization against established plan – time schedule against established plan – process quality against quality expectations and/or criteria – product quality against quality expectations and/or criteria – highlight product performance problems, trends – Measures the results of project activities: <ul style="list-style-type: none"> – tasks are performed on schedule – product's development is within the resource commitments allocated – References any goals established
07-06	039	Quality measure	<ul style="list-style-type: none"> – Measures quality attributes of the work products defined: <ul style="list-style-type: none"> – functionality – reliability – usability – efficiency – maintainability – portability – Measures quality attributes of the "end customer" product quality and reliability <p>NOTE: Refer ISO/IEC 9126 for detailed information on measurement of product quality.</p>
07-07	040	Risk measure	<ul style="list-style-type: none"> – Identifies the probability of risk occurring – Identifies the impact of risk occurring – Establishes measures for each risk defined – Measures the change in the risk state

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
07-08	042	Service level measure	<ul style="list-style-type: none"> – Real time measures taking while a system is operational, it measures the system's performance or expected service level – Identifies things like: <ul style="list-style-type: none"> – capacity – throughput – operational performance – operational service – service outage time – up time – job run time

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-00	016	Plan	<p>(As appropriate to the application and purpose)</p> <ul style="list-style-type: none"> – Identification of the plan owner – Includes: <ul style="list-style-type: none"> – the objective and scope of what is to be accomplished – assumptions made – constraints – risks – tasks to be accomplished – schedules, milestones and target dates – critical dependencies – maintenance disposition for the plan – Method / approach to accomplish plan – Identifies: <ul style="list-style-type: none"> – task ownership, including tasks performed by other parties (e.g. supplier, customer) – quality criteria – required work products – Includes resources to accomplish plan objectives: <ul style="list-style-type: none"> – time – staff (key roles and authorities e.g. sponsor) – materials / equipment – budget – Includes contingency plan for non-completed tasks – Plan is approved

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-01	068	Acceptance test plan	<ul style="list-style-type: none"> – Identified activities to be performed to test "deliverable" end customer product – Identifies who has responsibility for performance of acceptance test activities (supplier or customer) – Identifies the system configuration requirements for site – Identifies the installation requirements for site – Identifies how to validate installation activities were performed correctly – Identifies how to validate the deliverables (hardware / software / product) satisfied the customer requirements – Identifies associated test scripts / test cases – Identifies actions to be take upon acceptance of product – Refers to Quality plan
08-02	045	Acquisition plan	<ul style="list-style-type: none"> – Identifies what needs to be acquired – Establishes the approach for acquiring the product or service; options might include: <ul style="list-style-type: none"> – – off-the-shelf – – develop internally – – develop through contract – – enhance existing product or combination of these – Establishes the evaluation and supplier selection criteria – Acceptance strategy

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-03		Process assessment plan	<ul style="list-style-type: none"> – The identity of the sponsor of the assessment and the sponsor's relationship to the organizational unit being assessed – The assessment purpose including alignment with business goals – The assessment scope including: <ul style="list-style-type: none"> – the processes to be investigated within the organizational unit – the highest capability level to be investigated for each process within the assessment scope – the organizational unit that deploys these processes – The context which, as a minimum, includes: <ul style="list-style-type: none"> – the size of the organizational unit – the demographics of the organizational unit – the application domain of the products or services of the organizational unit – the size, criticality and complexity of the products or services – the quality characteristics of the products – The assessment constraints which may include: <ul style="list-style-type: none"> – availability of key resources – the maximum amount of time to be used for the assessment – specific processes or organizational units to be excluded from the assessment – the minimum, maximum or specific sample size or coverage that is desired for the assessment – the ownership of the assessment outputs and any restrictions on their use – controls on information resulting from a confidentiality agreement – The identity of the model(s) used within the assessment – The assessment approach or methodology – The identity of the assessors, including the competent assessor with specific responsibilities for the assessment – the criteria for competence of the assessor who is responsible for the assessment – The identity of assessees and support staff with specific responsibilities for the assessment – Any additional information to be collected during the assessment to support process improvement or process capability determination

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-04	091	Configuration management plan	<ul style="list-style-type: none"> – Defines or references the procedures to control changes to configuration items – Defines measurements used to determine the status of the configuration management activities – Defines configuration management audit criteria – Approved by the configuration management function – Identifies configuration library tools or mechanism – Includes management records and status reports that show the status and history of controlled items – Specifies the location and access mechanisms for the configuration management library – Storage, handling and delivery (including archival and retrieval) mechanisms specified
08-05	104	Development environment plan	<ul style="list-style-type: none"> – Floor plan – Environmental safety considerations – Regulatory requirements – Contractual requirements – Security considerations – Facility configuration – Special environmental requirements (e.g. air conditioning, raised floor, power) – Individual workspace needs defined – Workstations requirements – Supporting hardware / software / product – Tools – Communication equipment – Disaster recovery plan

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-06		Project activity network	<ul style="list-style-type: none"> – A graphic illustration of a project as a network diagram showing all of the project's activities, their attributes, and the relationships between them; the most common form is the PERT chart – Activity attributes include: <ul style="list-style-type: none"> – activity name – estimated duration – planned and actual start date – planned and actual completion date – resource requirements – The relationships between the activities may include: <ul style="list-style-type: none"> – predecessor activities – successor activities – dependency delays
08-07		System integration test plan	<ul style="list-style-type: none"> – Purpose of integration defined: <ul style="list-style-type: none"> – validation of the integrated elements of the system – validation of the integration of the system elements (hardware, support equipment, interfaced system)
08-08		Human resource management plan	<ul style="list-style-type: none"> – Human resource objectives / goals / policies – Satisfaction of human resource needs: <ul style="list-style-type: none"> – required skills identified – required competencies identified – skills acquisition and retention strategy – staff availability and project allocation – Human resource management: <ul style="list-style-type: none"> – statutory and regulatory requirements – conditions and benefits – organization reporting and communication structure – staff development – performance evaluation criteria

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-09	074	Installation and maintenance plan	<ul style="list-style-type: none"> – Identifies impacted site locations – Identification of the required components for the installation with appropriate version information (consideration given to at least the following): <ul style="list-style-type: none"> – released software – type of media – required maintenance fixes – support software required (conversion programs, validation routines, associated system interfaces, data base management system) – required customer documentation – installation instructions – identification of required hardware and peripheral equipment – Identification of supporting information or materials required: <ul style="list-style-type: none"> – parameter information – operation and maintenance information – pre-conversion information, materials or installed equipment – Type of installation (new vs. conversion of existing system, maintenance) – Custody of master and backup copies – Identification of go / no-go decision criteria – Identification of verification process: <ul style="list-style-type: none"> – of required tasks to prepare deliverables required – of components required at site – of installation procedures – of pre-installation construction or conversion activities – of system integration, release builds, etc. – Identification of customer acceptance requirements – Identification of any safety and security requirements
08-10	065	Software integration test plan	<ul style="list-style-type: none"> – Purpose of integration defined: <ul style="list-style-type: none"> – validation of a subset of the system (all programs required to make a sub-system work, a feature work, etc.) – validation of the integration of software to other system elements (hardware, support equipment, interfaced system)

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-11	074	Logistics maintenance plan	<ul style="list-style-type: none"> – Identifies impacted site locations – Identification of backup and recovery procedures – Identification of customer contacts and technical support personnel – Identification of customer acceptance requirements – Identification of any safety and security requirements
08-12	017	Project plan	<ul style="list-style-type: none"> – Defines: <ul style="list-style-type: none"> – work products to be developed – life cycle model and methodology to be used – customer requirements related to project management – tasks to be accomplished – task ownership – project resources – schedules, milestones and target dates – estimates – quality criteria – Identifies: <ul style="list-style-type: none"> – critical dependencies – required work products – project risks and risk mitigation plan – contingency actions for non-completed tasks

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-13	025	Quality plan	<ul style="list-style-type: none"> – Objectives / goal for quality – Defines the activities tasks required to ensure quality – References related work products – Method of assessment / assuring quality – References any regulatory requirements, standards, customer requirements – Identifies the expected quality criteria – Specifies the monitoring timeframe and quality checkpoints for the defined life cycle and associated activities planned – Target timeframe to achieve desired quality – Method to achieved goals: <ul style="list-style-type: none"> – – tasks to be performed – – ownership for tasks – – audit to be performed – – resource commitments – Identifies the quality criteria for work products and process tasks – Specifies the threshold / tolerance level allowed prior to requiring corrective actions – Defines quality measurements and benchmark data – Defines the quality record collection mechanism and timing of the collection – Specifies mechanism to feed collected quality record back into process impacted by poor quality – Approved by the quality responsible organization / function

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-14	103	Recovery plan	<ul style="list-style-type: none"> – Identifies what is to be recovered: – – procedures / methods to perform the recovery – – schedule for recovery – – time required for the recovery – – critical dependencies – – resources required for the recovery – – list of backups maintained – – staff responsible for recovery and roles assigned – – special materials required – – required work products – – required equipment – – required documentation – – locations and storage of backups – – contact information on who to notify about the recovery – – verification procedures – – cost estimation for recovery
08-15	067	Regression test plan	<ul style="list-style-type: none"> – Plan for validating that existing systems / features-functions have not been impacted by a change – Plan for validating that change has not impacted working elements of the system (interfaces, operations, etc.) – Plan for validating that change is compatible with existing system requirements (downward compatible) – Identification of the requirements for system element not changed – Identification of what system elements are to be regression tested (i.e., features, functions, interfaces, fixes) – Identification of the changes made – Identification of the regression test cases to be executed – Conditions for execution of regression testing
08-16	069	Release plan	<ul style="list-style-type: none"> – Identifies the functionality to be included in each release – Identifies the associated elements required (i.e., hardware, software, documentation etc.) – Mapping of the customer requests, requirements satisfied to particular releases of the product

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-17	032	Reuse plan	<ul style="list-style-type: none"> – Defines the policy about what items to be reused – Defines standards for construction of reusable objects: <ul style="list-style-type: none"> – – defines the attributes of reusable components – – quality / reliability expectations – – standard naming conventions – Defines the reuse repository (library, CASE tool, file, data base, etc.) – Identifies reusable components: <ul style="list-style-type: none"> – – directory of component – – description of components – – applicability of their use – – method to retrieve and use them – – restrictions for modifications and usage – Method for using reusable components – Establishes goal for reusable components
08-18	030	Review plan	<ul style="list-style-type: none"> – Defines: <ul style="list-style-type: none"> – – what to be reviewed – – roles and responsibilities of reviewers – – criteria for review (check-lists, requirements, standards) – – expected preparation time – – schedule for reviews – Identification of: <ul style="list-style-type: none"> – – procedures for conducting review – – review inputs and outputs – – expertise expected at each review – – review records to keep – – review measurements to keep – – resources, tools allocated to the review

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-19	023	Risk management plan	<ul style="list-style-type: none"> – Project risks identified and prioritized – Mechanism to track the risk – Threshold criteria to identify when corrective action required – Proposed ways to mitigate risks: <ul style="list-style-type: none"> – – risk mitigator – – work around – – corrective actions activities / tasks – – monitoring criteria – – mechanisms to measure risk
08-20		Risk mitigation plan	<ul style="list-style-type: none"> – Planned risk treatment activities and tasks: <ul style="list-style-type: none"> – – describes the specifics of the risk treatment selected for a risk or combination of risks found to be unacceptable – – describes any difficulties that may be found in implementing the treatment – Treatment schedule – Treatment resources and their allocation – Responsibilities and authority: <ul style="list-style-type: none"> – – describes who is responsible for ensuring that the treatment is being implemented and their authority – Treatment control measures: <ul style="list-style-type: none"> – – defines the measures that will be used to evaluate the effectiveness of the risk treatment – Treatment cost – Interfaces among parties involved: <ul style="list-style-type: none"> – – describes any coordination among stakeholders or with the project's master plan that must occur for the treatment to be properly implemented – Environment / infrastructure: <ul style="list-style-type: none"> – – describes any environmental or infrastructure requirements or impacts (e.g., safety or security impacts that the treatment may have) – Risk treatment plan change procedures and history
08-21	064	Software test plan	<ul style="list-style-type: none"> – Identifies strategy for verifying features and/or functions operate as defined in the requirements

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-22	066	System test plan	<ul style="list-style-type: none"> – Identifies strategy for verifying the integration of system elements as defined in the system architecture specification – Identifies compliance criteria for system requirements – Provides test coverage for all elements of the system: <ul style="list-style-type: none"> – software – hardware – external interfaces – customer documentation – installation activities – initialization – conversion programs
08-23	059	Validation test plan	<ul style="list-style-type: none"> – Identifies the approach to performing the test – Identification of elements to be tested – Identify aggregates and sequence for testing – Identify urgent release – Identification of required system configuration (software, hardware, interface elements) – Identification of the associated development owner for elements to be tested – Identification of associated test scripts / test cases – Sequence ordering of how testing will be executed – Identification of requirements which will be validated by tests (i.e., customer requirements, regulatory requirements and system requirements) – Identification of the problem reporting mechanism – Identification of the test tools and resources required (test channels, analyzers, test emulators, etc.) – Identification of the test schedule – Identification of the test completion criteria – Identification of audits to be performed – Official source libraries and versions of hardware / software / product defined

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
08-24	088	Training plan	<ul style="list-style-type: none"> – Defines current staff capabilities – Defines the skills required – Outlines course available to achieve training goal
08-25	063	Unit test plan	<ul style="list-style-type: none"> – Identifies strategy for verifying unit functionality (i.e., a program, a block, a module, a routine) against the requirements and design – Specifies how basic program requirements will be verified
08-26		Documentation plan	<ul style="list-style-type: none"> – Identifies documents to be produced – Defines the documentation activities during the life cycle of the software product or service – Identifies any applicable standards and templates – Defines requirements for documents – Review and authorization practices – Distribution of the documents – Maintenance and disposal of the documents
08-27		Problem management plan	<ul style="list-style-type: none"> – Defines problem resolution activities including identification, recording, description and classification – Problem resolution approach: evaluation and correction of the problem – Defines problem tracking – Mechanism to collect and distribute problem resolutions
08-28		Change management plan	<ul style="list-style-type: none"> – Defines change management activities including identification, recording, description, analysis and implementation – Defines approach to track status of change requests – Defines verification and validation activities – Change approval and implication review
08-29		Improvement plan	<ul style="list-style-type: none"> – Improvement objectives derived from organizational business goals – Organizational scope – Process scope, the processes to be improved – Key roles and responsibilities – Appropriate milestones, review points and reporting mechanisms – Activities to be performed to keep all those affected by the improvement programme informed of progress

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
09-00	014	Policy	<ul style="list-style-type: none"> – Authorized – Available to all personnel impacted by the policy – Establishes practices / rules to be adhered to
09-01	015	Personnel policy	<ul style="list-style-type: none"> – Defines recruitment policy – Defines training policy – Defines career opportunities for individuals in the organization – Defines team building strategy – Defines reward and recognition strategy – Defines performance appraisal strategy
09-02	024	Quality policy	<ul style="list-style-type: none"> – Authorized – States commitment to quality principles – Identifies who is expected to follow policy
09-03		Reuse policy	<ul style="list-style-type: none"> – Identification of reuse requirements – Establishes the rules of reuse – Documents the reuse adoption strategy including goals and objectives – Identification of the reuse program – Identification of the name of the reuse sponsor – Identification of the reuse program participants – Identification of the reuse steering function – Identification of reuse program support functions
09-04		Supplier selection policy	<ul style="list-style-type: none"> – Authorized – Available to all personnel impacted by the policy – Establishes practices / rules to be adhered to: <ul style="list-style-type: none"> – to evaluate and select subcontractors on the basis of their ability to meet subcontract requirements – Defines the type and extent of control exercised over suppliers – Establishes the need for, and maintenance requirements of, records associated with supplier selection

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
10-00	003	Process description	<ul style="list-style-type: none"> – A detailed description of the process / procedure which includes: – – tailoring of the standard process (if applicable) – – purpose of the process – – outcomes of the process – – task and activities to be performed and ordering of tasks – – critical dependencies between task activities – – expected time required to execute task – – input / output work products – – links between input and outputs work products – Identifies process entry and exit criteria – Identifies internal and external interfaces to the process – Identifies process measures – Identifies quality expectations – Identifies functional roles and responsibilities – Approved by authorised personnel
10-01	002	Life cycle model	<ul style="list-style-type: none"> – High level description of activities performed at each life cycle phase – Sequencing of the life cycle phases – Identification of critical life cycle phase dependencies – Identification of required inputs, outputs to each life cycle phase – Identification of the key decision points (milestones) model – Identification of the quality control points in the model

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
10-02		Test procedure	<ul style="list-style-type: none"> – Identification of a name – Identification of a description – Identification of potential implementation issues – Identification of the person who completed the test procedure – Identification of the date it was completed – Identification of prerequisites – Identification of procedure steps including the step number, the required action by the tester and the expected results – Used in testing related to: <ul style="list-style-type: none"> – software and system installation – software integration – software – system integration – system

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-08	106	Installation record	<ul style="list-style-type: none"> – Record of what was installed – Release and system configuration information recorded – Special site specific information recorded – Identification of any acceptance testing performed – Installation performance information captured: <ul style="list-style-type: none"> – number of faults found after the installation or conversion – time to install – Ability to bring up system after installation conversion – Record of customer approval
13-09	019	Meeting support record	<ul style="list-style-type: none"> – Agenda and minutes that are records that define: <ul style="list-style-type: none"> – purpose of meeting – attendees – date, place held – reference to previous minutes – what was accomplished – identifies issues raised – any open issues – next meeting, if any
13-10		Configuration management record	<ul style="list-style-type: none"> – Status of the work products / items and modifications – Identifies items under configuration control – Identifies activities performed e.g. backup, storage, archiving, handling and delivery of configured items – Supports consistency of the product
13-11		Personnel performance review record	<ul style="list-style-type: none"> – Relevant information about personnel including: <ul style="list-style-type: none"> – appraisal history – describes achievements, or lack of – disciplinary history

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-12	108	Personnel record	<ul style="list-style-type: none"> – Relevant information about personnel including: <ul style="list-style-type: none"> – name, address, date of birth, marital status – grade, and pay – qualifications – education – skills – experience – training
13-13	079	Product release approval record	<ul style="list-style-type: none"> – Content information of what is to be shipped or delivered – Identification of: <ul style="list-style-type: none"> – who it is intended for – address where to delivered – the date released – Record of supplier approval
13-14	020	Progress status record	<ul style="list-style-type: none"> – Record of the status of a plan(s) (actual against planned) such as: <ul style="list-style-type: none"> – status of actual tasks against planned tasks – status of actual results against established objectives / goals – status of actual resource allocation against planned resources – status of actual cost against budget estimates – status of actual time against planned schedule – status of actual quality against planned quality – Record of any deviations from planned activities and reason why

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-15		Proposal review record	<ul style="list-style-type: none"> – Scope of proposal and requirements – Possible contingencies or risks – Alignment of the proposal with the strategic business plan of the organization – Protection of proprietary information – Requirements which differ from those in the original documentation – Capability to meet contractual requirements – Responsibility for subcontracted work – Terminology – Supplier ability to meet obligations – Approved
13-16	094	Change request	<ul style="list-style-type: none"> – Identifies purpose of change – Identifies request status (new, accepted, rejected) – Identifies requester contact information – Impacted system(s) – Impact to operations of existing system(s) defined – Impact to associated documentation defined – Criticality of the request, date needed by

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-17	083	Customer request	<ul style="list-style-type: none"> – Identifies request purpose, such as: <ul style="list-style-type: none"> – new development – enhancement – internal customer – operations – documentation – informational – Identifies request status information, such as: <ul style="list-style-type: none"> – date opened – current status – date assigned and responsible owner – date verified – date closed – Identifies priority / severity of the request – Identifies customer information, such as: <ul style="list-style-type: none"> – company / person initiating the request – contact information and details – system site configuration information – impacted system(s) – impact to operations of existing systems – criticality of the request – expected customer response / closure requirements – Identifies needed requirements / standards – Identifies information sent with request (i.e., RFPs, dumps, etc.)
13-18	028	Quality record	<ul style="list-style-type: none"> – Defines what information to keep – Defines what tasks / activities / process produce the information – Defines when the data was collected – Defines source of any associated data – Identifies the associated quality criteria – Identifies any associated measurements using the information – Identifies any requirements to be adhered to create the record, or satisfied by the record

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-19	031	Review record	<ul style="list-style-type: none"> – Provides the context information about the review: <ul style="list-style-type: none"> – – what was reviewed – – lists reviewers who attended – – status of the review – Provides information about the coverage of the review: <ul style="list-style-type: none"> – – check-lists – – review criteria – – requirements – – compliance to standards – Records information about: <ul style="list-style-type: none"> – – the readiness for the review – – preparation time spent for the review – – time spent in the review – – reviewers, roles and expertise – Identifies the required corrective actions: <ul style="list-style-type: none"> – – risk identification – – prioritized list of deviations and problems discovered – – the actions, tasks to be performed to fix the problem – – ownership for corrective action – – status and target closure dates for identified problems

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-20		Risk action request	<ul style="list-style-type: none"> – Date of initiation – Scope – Subject – Request originator – Risk management process context: <ul style="list-style-type: none"> – – this section may be provided once, and then referenced in subsequent action requests if no changes have occurred – – process scope – – stakeholder perspective – – risk categories – – risk thresholds – – project objectives – – project assumptions – – project constraints – Risks: <ul style="list-style-type: none"> – – this section may cover one risk or many, as the user chooses – – where all the information above applies to the whole set of risks, one action request may suffice – – where the information varies, each request may cover the risk or risks that share common information – – risk description(s) – – risk probability – – risk consequences – – expected timing of risk – Risk treatment alternatives: <ul style="list-style-type: none"> – – alternative descriptions – – recommended alternative(s) – – justifications – Risk action request disposition: <ul style="list-style-type: none"> – – each request should be annotated as to whether it is accepted, rejected, or modified, and the rationale provided for whichever decision is taken

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-21	095	Change control record	<ul style="list-style-type: none"> – Used as a mechanism to control change to baselined products / products in official project release libraries – Record of the change requested and made to a baselined product (work products, software, customer documentation, etc.): <ul style="list-style-type: none"> – – identification of system, documents impacted with change – – identification of change requester – – identification of party responsible for the change – – identification of status of the change – Linkage to associated customer requests, internal change requests, etc. – Appropriate approvals – Duplicate requests are identified and grouped
13-22	058	Traceability record	<ul style="list-style-type: none"> – Identifies requirements to be traced – Identifies a mapping of requirement to life cycle work products – Provides the linkage of requirements to work product decomposition (i.e., requirement → design → code → test → deliverables, etc.) – Provides forward and backwards mapping of requirements to associated work products throughout all phases of the life cycle – NOTE: this may be included as a function of another defined work product (example: A CASE tool for design decomposition may have a mapping ability as part of its features)
13-23	089	Training record	<ul style="list-style-type: none"> – Record of employee's training – Identifies employee's name – Identifies any courses taken (date, hours, course title) – Identifies current skills / capabilities / experience level, lists: <ul style="list-style-type: none"> – – formal education – – certifications / examination results – – in-house training – – mentoring – Identifies future training needs – Identifies current status of training requests

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
13-24		Validation results	<ul style="list-style-type: none"> – Validation check-list – Passed items of validation – Failed items of validation – Pending items of validation – Problems identified during validation – Risk analysis – Recommendation of actions – Conclusions of validation – Signature of validation
13-25		Verification results	<ul style="list-style-type: none"> – Verification check-list – Passed items of verification – Failed items of verification – Pending items of verification – Problems identified during verification – Risk analysis – Recommendation of actions – Conclusions of verification – Signature of verification
14-00		Register	<ul style="list-style-type: none"> – A register is a compilation of data or information captured in a defined sequence to enable: <ul style="list-style-type: none"> – an overall view of evidence of activities that have taken place – monitoring and analyses – provides evidence of performance of a process over time
14-01	096	Change history	<ul style="list-style-type: none"> – Historical records of all changes made to an object (document, file, software module, etc.): <ul style="list-style-type: none"> – description of change – version information about changed object – date of change – change requester information – change control record information

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
14-02	097	Corrective action register	<ul style="list-style-type: none"> – Identifies the initial problem – Identifies the ownership for completion of defined action – Defines a solution (series of actions to fix problem) – Identifies the open date and target closure date – Contains a status indicator – Indicates follow up audit actions
14-03		Hardware assets register	<ul style="list-style-type: none"> – Identifies the key characteristics and identification of the hardware items, including: <ul style="list-style-type: none"> – description of the equipment – unique means of identification (e.g. Serial number) – make i.e. manufacturer – model details – when acquired – product configuration details – storage or deployment location – acquisition cost – equipment status (e.g. in service, retired)
14-04		Test log	<ul style="list-style-type: none"> – Register of test results over the software product life cycle – Identifies what elements were tested – Identifies date tests were executed – Identifies responsible person for the test results
14-05		Preferred suppliers register	<ul style="list-style-type: none"> – Subcontractor or supplier history – List of potential subcontractor / suppliers – Qualification information – Identification of their qualifications – Past history information when it exists
14-06	005	Schedule	<ul style="list-style-type: none"> – Identifies the tasks to be performed – Identifies the expected and actual start and completion date for required tasks – Allows for the identification of critical tasks and task dependencies – Identifies task completion status, vs. planned date – Has a mapping to scheduled resource data

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
14-07		Software assets register	<ul style="list-style-type: none"> – Identifies the key characteristics and identification of the software items, including: <ul style="list-style-type: none"> – software product type (e.g. Tool, Application, Driver) – product title – product version – serial number – delivery media (e.g. CD ROMS, and number of items) – customer documentation - number of items – allowed number of users – intended class of users – storage location – product manager – cost of ownership (e.g. purchase price, license renewal cost) – product status (active, retired)
14-08	098	Tracking system	<ul style="list-style-type: none"> – Ability to record customer and process owner information – Ability to record related system configuration information – Ability to record information about problem or action needed: <ul style="list-style-type: none"> – date opened and target closure date – severity / criticality of item – status of any problem or actions needed – information about the problem or action owner – priority of problem resolution – Ability to record proposed resolution or action plan – Ability to provide management status information – Information is available to all with a need to know – Integrated change control system(s) / records
14-09	006	Work breakdown structure	<ul style="list-style-type: none"> – Defines tasks to be performed, and their amendments – Documents ownership for tasks – Documents critical dependencies between tasks – Documents inputs and output work products – Documents the critical dependencies between defined work products

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
14-10	077	Work product distribution register	<ul style="list-style-type: none"> – List of current list of receivers and their delivery address – Identification of media expected for delivery (manual, CD-ROM, email, etc.)
14-11		Work product list	<ul style="list-style-type: none"> – Identifies: <ul style="list-style-type: none"> – name of work product – work product reference ID – work product revision – when updated – work product status – when approved – reference to approval source – file reference
15-00		Report	<ul style="list-style-type: none"> – A work product describing a situation that: <ul style="list-style-type: none"> – includes results and status – identifies applicable / associated information – identifies considerations / constraints – provides evidence / verification

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
15-01	021	Analysis report	<ul style="list-style-type: none"> – What was analyzed – Who did the analysis – The analysis criteria used: <ul style="list-style-type: none"> – selection criteria or prioritization scheme used – decision criteria – quality criteria – Records the results: <ul style="list-style-type: none"> – what was decided / selected – reason for the selection – assumptions made – potential risks – Aspects of correctness to analyze include: <ul style="list-style-type: none"> – completeness – understandability – testability – verifiability – feasibility – validity – consistency – adequacy of content
15-02		Assessment report	<ul style="list-style-type: none"> – Identification of the date of the assessment – Identification of the assessment input – Identification of the objective evidence gathered – Identification of the assessment approach used – Identification of the set of process profiles resulting from the assessment – Identification of any additional information collected during the assessment that was identified in the assessment input to support process improvement or process capability determination

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
15-03		Configuration status report	<ul style="list-style-type: none"> – Identification of the number of items under configuration management – Identification of risks associated to configuration management – Identification of the number of configuration management items lost and reason for their loss – Identification of problem and issues related to configuration management – Identification of receiving parties – Identification of baselines made
15-04	046	Market analysis report	<ul style="list-style-type: none"> – Contains information about: <ul style="list-style-type: none"> – what was analyzed – the selection criteria and prioritization scheme used – the analysis criteria used – Records the results which identify the: <ul style="list-style-type: none"> – market opportunities and market window – business drivers – cost / benefit – potential customers and their profiles information – any assumptions made – alternate solutions considered and/or rejected – risks and/or constraints (regulatory issues) – Defines the product offering and target release / launch date

WP ID	WP-ID (according to TR 15504-5)	WP Name	WP Characteristics
15-05		Evaluation report	<ul style="list-style-type: none"> – States the purpose of evaluation – Method used for evaluation – Requirements used for the evaluation – Assumptions and limitations – Identifies the context and scope information required: <ul style="list-style-type: none"> – date of evaluation – parties involved – context details – evaluation instrument (check-list, tool) used – Records the result: <ul style="list-style-type: none"> – data – identifies the required corrective and preventive actions – improvement opportunities, as appropriate

20-00		Template	<ul style="list-style-type: none"> – Defines the attributes associated with a work product to be created as a consequence of a process execution – Identifies technical elements typically associated with this product type – Defines expected form and style
21-00	007	Work product	<ul style="list-style-type: none"> – Defines the attributes associated with an artefact from a process execution: – – key elements to be represented in the work product

Annex C (informative)

Adaptation of the assessment model

This Annex gives recommendations for developing assessment indicators and adjusting the assessment model, such as:

- expanding a process into multiple processes; and
- introducing a new process with associated assessment indicators.

It contains a style guide for identifying and defining base practices and generic practices.

C.1 Assessment indicators identification

A nomenclature for assessment indicators is defined in order to identify them unambiguously and relate them to the architecture of the model. The nomenclature for base practices facilitates the identification of process groups, the processes that belong to each process group, and the base practices that belong to each process. For generic practices, the nomenclature facilitates the identification of capability levels, the process attributes that belong to each capability level, and the generic practices that belong to each process attribute. In process assessments using the assessment model, the nomenclature and identifiers contained in this model should be used to identify practices referenced as evidence justifying the rating of a process attribute.

Each practice is linked to its parent entity, whether a process or a process attribute, through a numbering scheme, based upon the identifiers for processes and process attributes in the assessment model.

Each practice is assigned an identifier consisting of a multi-part alphanumeric code.

C.1.1 Base practices

This clause gives guidelines for defining base practices. Base practices are used in this exemplar assessment model provide a definition of the tasks and activities needed to accomplish the process purpose and fulfil the process outcomes.

A **base practice** is identified with the following sequence: PG.PR.BPPN.

Where the codes are:

- PG process group identifier (3 letters)
- PR process number (within the process group)
- BP the text "BP" used to signify Base Practice
- PN practice number (within the process)

Templates for constructing definitions of new base practices are given in Table C.1. A base practice description consists of the following components:

- practice identifier;
- practice name;

- practice description;
- list of outcomes addressed;
- optionally, additional notes on the practice.

Table C.1 — Guidelines for describing base practices

Component	Guideline
Practice identifier	PG.PR.BPPN
Practice name	<ol style="list-style-type: none"> 1. The name of the base practice should identify what the practice does in summary form. 2. In general, the name should be an action-oriented phrase, beginning with a verb which summarizes the action (e.g. "Plan", "Establish", "Build"), and followed by a word or phrase that describes what is to be accomplished (e.g. "Identify the need"). 3. The practice name appears on the same line as and immediately after the practice identifier.
Practice description	One or more sentences that amplify the practice name.
Outcomes addressed	The list of outcomes addressed, in the form: [Outcomes: <outcome number>, ..., <outcome number>]. When only one outcome is addressed, the form [Outcome: <outcome number>] is used.
Informative notes	<p>Optionally, notes may be appended to the base practice to further describe the practice, to give examples, or to provide cross-references to other practices, in the form:</p> <p>NOTE <note number>: <text></p> <p>Where there is more than one note for several base practices related to a process (PR) then these should be numerically sequenced.</p>

Example of basic practice description with note:

ENG.1.BP1: Obtain customer requirements and requests. Obtain and define customer requirements and requests through direct and continuous solicitation of customer and user input. [Outcome: 1, 4]

NOTE 1: Requirements may be obtained also through review of customer business proposals, target operating and hardware environment, and other documents bearing on customer requirements.

C.1.2 Generic practices

A **generic practice** is identified with the following sequence: **GP** CL.PAN.PN.

Where the codes are:

- GP the text "GP" used to signify Generic Practice
- CL capability level number
- PAN process attribute number (within the capability level)
- PN practice number (within the process attribute)

Templates for constructing definition of new generic practices are given in Table C.2. A generic practice description consists of the following components:

Table C.2 — Guide-lines for describing generic practices

Component	Guideline
Practice identifier	GP CL.PAN.PN
Practice name	<ol style="list-style-type: none"> 1. The name of the generic practice should identify what the practice does in summary form. 2. In general, the name should be an action-oriented phrase, beginning with a verb which summarizes the action (e.g., "Plan", "Establish", "Build"), and followed by a word or phrase that describes what is to be accomplished (e.g. "Identify the need") followed by the purpose of performing this practice (e.g., "perform this practice" to "achieve this attribute"). 3. The practice name appears on the same line as and immediately after the practice identifier, with the first significant phrase in bold style.
Practice description	A list of sentences detailing the practice name.
Informative notes	<p>Optionally, notes may be appended to the generic practice to further describe the practice, to give examples, or to provide cross-references to other practices, in the form:</p> <p>NOTE <note number>: <text>.</p>

Example of generic practice description:

GP 2.1.5 Identify and make available resources to perform the process according to plan.

The human and infrastructure resources necessary for performing the process are identified, made available, allocated and used.

The information necessary to perform the process is identified and made available.

The necessary infrastructure and facilities are identified and made available.

C.2 Adaptation of the exemplar process assessment model

C.2.1 Adding to or removing processes from the process dimension

The Process Reference Model used to define the Process Assessment Model described in this standard is derived from the ISO/IEC 12207 AMD and AMD 2, which complies with ISO/IEC 15504-2 requirements, as demonstrated in clause 4.

Adaptation in the process dimension (e.g. to add or remove processes) according to the assessment context must not impact the compliance with the ISO/IEC 15504-2 requirements.

C.2.2 Identifying process performance indicators for a new process

C.2.2.1 Base practices

The set of base practices, when performed, provides an indication of the extent of achievement of the process purpose.

As for each process of this exemplar model, the set of base practices for a new process should cover the achievement of the whole set of process outcomes of the process.

When defining a new base practice, the following should be considered.

A base practice is:

- Understandable, clear, unambiguous;
- Applicable to the technical area or domain of the Process Assessment Model;
- Has an adequate granularity and is homogenous; and
- Not too long (2 to 4 lines).

Evaluating the performance of a base practice during an assessment should:

- Take no more than 10 to 20 minutes to cover its scope, and
- Provide evidence associated with the performance of the base practice.

C.2.2.2 Work products

Work products are useful for the assessor to identify the existence of the process. For instance, at the beginning of an assessment, identifying the set of work products produced by the organizational unit is an objective way to map the organization specific set of processes to the Process Assessment Model set of processes.

As the scope of this exemplar process assessment model covers software life cycle processes, the set of work products for a new process may already be defined within the model. However, the new process may be outside the domain of this process assessment model. In this case, new work products should be identified and their characteristics should facilitate the mapping between the new process and any specific organization processes.
